(1) Extension Program/ Project Title: PUYOY Enterprise Project	
Proponent Name:	John Keneth A. Ada
Academic Rank:	Assistant Professor IV
Co-Authors (with academic rank):	Leah B. Yakit (Assoc. Prof. I), Gelene Roda I. Alvarez (Inst. I), Kris B. Roxas (Assoc. Prof. I), Pet Roana B. Batacandolo (Assoc. Prof. II), Jonan P. Burgos (Asst. Prof. IV), Jiro Emmanuel Bangud (Extensionist I)
Campus/Satellite College/Address:	Pontevedra Campus
Telephone/Cell Phone/Fax Number:	09662942673
E-mail Address:	johnkenethada@gmail.com/jkaada@capsu.edu.ph

(2) Category (please check) ☐ Education and Skill Empowerment ☒ Agriculture/Fisheries/Livelihood ☐ Health/Environment
The Lesser Thrush Eel (<i>Moringua microchir</i>), locally known as "Puyoy," is a brackish eel and a unique delicacy in the Philippines. Abundant in Capiz, particularly in the municipality of President and some parts of Pontevedra and Pilar, this elusive eel grows up to 12 inches, presenting a challenge for fishermen, locally called Manugpuyoy. Navigating motorized boats, they access mudflats and mangroves, wading through water or knee-deep mud during low tide, using a metal fishing gear called "karit" to catch the slimy marine creature (source: The Philippines Today). Despite its peculiar appearance, Puyoy is a nutritious source of protein, vitamins, fats, and minerals, providing health benefits (source: DRHealthBenefits.com). Beyond its nutritional value, Puyoy is an exotic and rare delicacy found in wetlands, distinguishing it from typical street food. Its rich, flavorful, and meaty taste makes it a popular choice as a snack or viand. Moreover, sustainable management of Puyoy can contribute to marine ecosystem conservation, offering economic opportunities while preserving cultural traditions and community identity.

Overall, Puyoy brings numerous benefits, spanning health, economic, environmental, and cultural aspects, contributing to the well-being of both the community and the planet.

(www.pinned.ph)

Despite the engagement of fisherfolks in Puyoy production and marketing, the profitability remains low, as revealed in the study by Ben Ross Bulquerin and the group re: Lesser Thrush Eel (*Moringua microchir*) “Puyoy”: Production, Marketing and Culinary Uses. The study indicates low catch quantities varying by season, low profitability margins, and limited culinary applications.

To address this, the project aims to assist fisherfolks by creating opportunities from Puyoy, serving as livelihood or an additional income source. It involves training on value-added techniques for Puyoy, enhancing business and marketing skills, and conducting information campaigns on proper mangrove/coastal management to preserve Puyoy habitats for increased and sustainable production.

The project will be implemented in partnership with the Municipality of President Roxas, specifically involving the Municipal Tourism Office and the Department of Trade and Industry (DTI).

(5) RATIONALE

Eels, known for their delicacy and difficulty in capture, are a prized species in Philippine freshwater and brackish waters, reflecting their high market value. The "Puyoy," a brackish water eel, holds the status of a favorite delicacy in President Roxas, Capiz, and nearby towns. Found in wetlands with varying saltwater concentrations, including Barangay Sangkal, Madulano, Quiajo, Pandan, and Pinamihagan in President Roxas, the Puyoy venture faces challenges, particularly low profitability due to limited value-added support.

Studies by Obligar et al. (2023) and Bulquerin et al. (2023) shed light on Puyoy's diversity, by identifying markers like "agihis" indicating its presence. Exploitation has led to a rapid decline in the Puyoy population, reliant solely on natural reproduction, and lacking a culture system in the municipality. Fisherfolks, especially "Manugpuyoy," encounter issues such as changing weather conditions, insufficient supply, low profitability, and product diversity limitations.

			Revision No.	00
	Document Title:	EXTENSION PROPOSAL	Effective Date	
			Page	

The proposed project addresses these challenges comprehensively, deriving solutions from the results of Bulquerin's Research Study. Success hinges on the commitment of project implementers, active beneficiary participation, and support from institutions like CapSU Pontevedra – Extension Department and LGU President Roxas. The university's expertise and faculty, coupled with the LGU's data and resources, are crucial for project materialization.

The "Puyoy Enterprise Project" is deemed essential for the "Manugpuyoy" Fisherfolks, offering not only income potential but also a chance to contribute to President Roxas' tourism sector. The project is timely, promising recognition and opportunities for the sector, foreseeing a leadership role in community development.

(6) GOALS AND OBJECTIVES

The main goal of this project is to empower and increase the income of our 'Manugpuyoy' Fisherfolks through assistance in product development and business ventures, with these specific objectives:

- To enable our “Manugpuyoy” to create value-added products through Puyoy culinary diversification;
- To provide training on the proper handling and storing of 'Puyoy';
- To offer technical assistance to help our 'Manugpuyoy' improve their skills in managing business opportunities related to Puyoy, which they can use to augment their household budget or livelihood; and
- To enhance the knowledge of 'Manugpuyoy' on proper mangrove/coastal management to preserve habitats for sustainable production."

(7) PROJECT DESCRIPTION

The PUYOY Enterprise Project will be implemented in the five barangays of President Roxas, Capiz, with the identified 'Manugpuyoy' Fisherfolks as the target beneficiaries. The project will be executed by CapSU Pontevedra and LGU President Roxas under the KaLaPIT (Kabuy-anan, Ika-ayong Lawas, Panguma, Ihibalo, Teknolohiya) Program. Spearheaded by the College of Management under its MANGGAD (Management of Assets and Natural Resources for Good Governance and Development) program, the project will collaborate with faculty partners from

			Revision No.	00
	Document Title:	EXTENSION PROPOSAL	Effective Date	
			Page	

the Fisheries Department. The launch is scheduled for February 2024, with an expected completion in July 2024.

The project will comprise two phases. Phase I will focus on training for value-added product development, proper handling and storing of the fish, and business management. Phase II will emphasize information dissemination to enhance knowledge on mangrove/coastal management for preserving habitats and ensuring sustainable production.

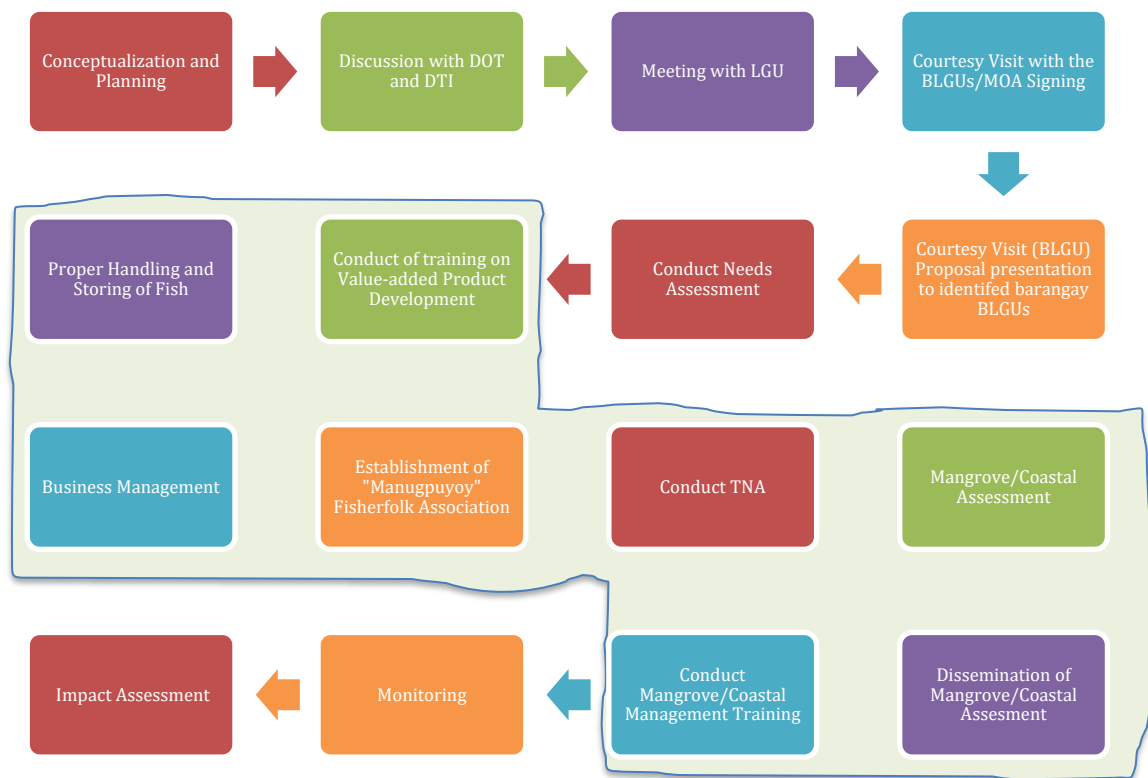

(8) PROJECT IMPLEMENTATION AND Monitoring & Evaluation SYSTEM

Methodology

After careful deliberation, the project proponents will initiate discussions with the Municipal Tourism Office and the DTI of President Roxas, Capiz, to explore potential collaboration, leading to a well-thought-out plan for project implementation. Subsequently, meetings will be arranged with Hon. Mayor Receliste L. Escolin to outline planned activities. The Project Team will conduct courtesy visits to the identified barangays and the project's rationale will be presented to the Barangay Councils. After an agreement with the barangays including crafting of Memorandum of Agreement, the team will proceed with training on value-added product development, proper handling and storing of the fish, and business management, along with conducting a Training Needs Assessment survey.

Feedback will be noted for the improvement of the project. Monitoring and impact assessments will be conducted after project implementation.

Duties and Responsibilities

CapSU Pontevedra

1. Conceptualize project proposal details and deliverables.
2. Suggest possible solutions to problems that may exist during the implementation of the program.
3. Conduct training, survey and assessment with partner agencies.
4. Assist in the implementation of the project under the CapSU Pontevedra Extension Program.
5. Conduct consultative meetings, monitoring, and evaluation.

DOT, DTI and B/LGU

1. Ensure the safety of the faculty, staff, and students of CapSU during the conduct of extension work.
2. In charge of the identification of the project recipients.
3. Provide local venues for meetings and activities.
4. Attend consultative meetings called for relative to the program as the need arises.
5. May offer certain funds or any form of goods as part of counterpart, if needed.
6. Assists CapSU Pontevedra in the monitoring and evaluation of the recipients.
7. Ensure full support and cooperation on the agreed terms of project implementation.

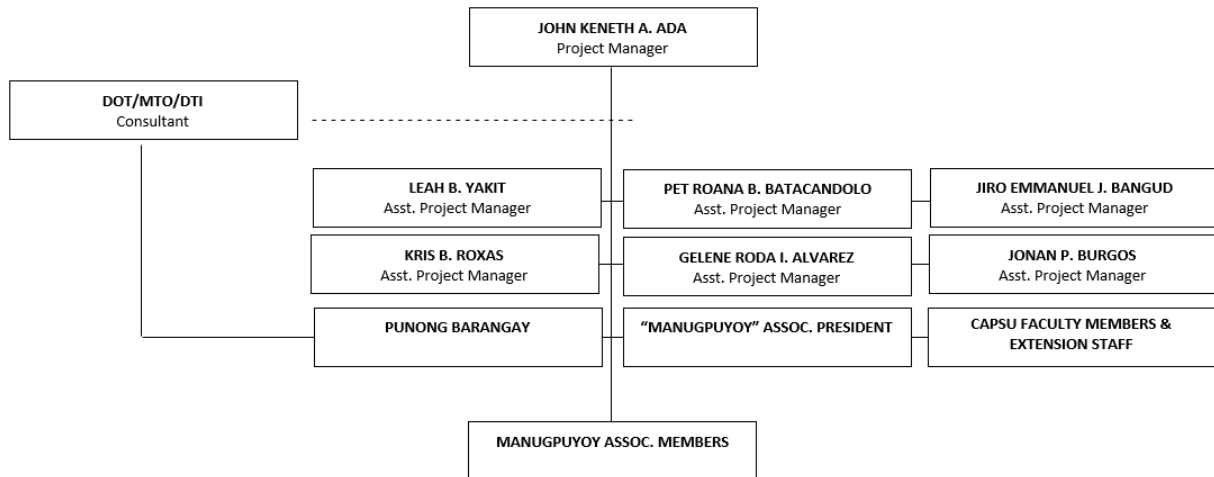

Beneficiaries

1. Ensure the safety of the faculty, staff, and students of CapSU during the conduct of extension work.
2. Abide with the policies, rules, and laws promulgated.
3. Attend consultative meetings called for relative to the program.
4. Ensure full support and cooperation on the agreed terms of project implementation.

C. Monitoring and Evaluation Scheme

Establishing rapport and gaining trust from the target beneficiaries are the most essential elements the project management team wants to build. The team wants the beneficiaries will have a sustainable source of alternative income or eventually livelihood. Hence, to materialize these objectives, a regular visit once every two months will be conducted. Attending regular meetings or conducting focused group discussion activities will also be made.

M & E Framework

Project Title:	Puyoy Enterprise Project			
Goal:	To empower and increase the income of our 'Manugpuyoy' Fisherfolks through assistance in product development and business ventures.			
Objective:	To enable our 'Manugpuyoy' to create value-added products through Puyoy culinary diversification; • To provide training on the proper handling and storing of 'Puyoy'; • To offer technical assistance to help our 'Manugpuyoy' improve their skills in managing business opportunities related to Puyoy, which they can use to augment their household budget or livelihood; and • To enhance the knowledge of 'Manugpuyoy' on proper mangrove/coastal management to preserve habitats for sustainable production.			
Stakeholders	Information Requirements	Actor/Person Responsible	When (Timing and Frequency)	Activities/Process/Methods
“Manugpuyoy” Fisherfolks Association Members	• Training on value-added product development, • Expertise in proper handling, storing, and business management of Puyoy • Proper habitat management for sustainability	CapSU Staff, DOT/DTI Staff, BLGU & Association Officials	Monthly/Quarterly	Field Visits, Focus Group Discussions, Assembly/Meeting
	• Outcome evaluation report – with or without the project/ impact.		After the completion of the project.	Project Evaluation and Feed backing Activity
CapSU & DOT/DTI Staff	• Updated registration of the Fisherfolk Members in the municipality/ community • Updated list of members in the association	CapSU Staff, DOT/DTI Staff, BLGU & Association Officials	Whole duration	Validation, Coordinator between/among the partner agencies/offices.

(11) Executive Summary

The Puyoy Enterprise Project aims to uplift the income of local fisherfolks (Manugpuyoy) in President Roxas, Capiz, who catch the Lesser Thrush Eel, locally known as "Puyoy." Despite Puyoy being a nutritious and unique delicacy, profitability remains low due to various challenges. To address this, the project plans to empower fisherfolks through training in value-added product development, proper handling and storing of Puyoy, business management, and mangrove/coastal management. The project, led by CapSU Pontevedra and LGU President Roxas, will be implemented in starting in January 2024. The goals include economic empowerment, sustainable Puyoy production, and contribution to tourism. The project involves collaboration with the Municipality, DOT, and DTI, with monitoring and evaluation conducted for continuous improvement. The beneficiaries will also form an association for better organization and support. The project expects completion by July 2024, envisioning a positive impact on the community's well-being and development.
