**(9) Rationale** (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

In the fast-paced evolution of higher education, the role of technology in facilitating seamless campus experiences is becoming increasingly vital. Capiz State University Pontevedra recognizes the challenges associated with traditional campus navigation methods and endeavors to address these through the development of UniNav 3D, a pioneering University Navigator Application for CapSU Pontevedra. The primary motivation behind UniNav 3D is to transform the way individuals navigate the wide Capiz State University Pontevedra campus. Traditional navigation systems often lead to confusion and inefficiency, hindering the overall experience for students, faculty, and visitors. UniNav 3D aims to bridge these gaps by integrating modern 3D mapping technology, providing an intuitive and interactive platform for efficient navigation.

The significance of this study lies in its exploration of the impact of UniNav 3D on the university community. By investigating the application's development, implementation, and user experiences, this research aims to shed light on the effectiveness of the navigation tool in improving campus mobility. UniNav 3D not only serves as a solution to navigational challenges but also contributes to fostering a technologically advanced and user-centric academic environment. Moreover, the UniNav 3D project aligns with broader trends in educational technology, emphasizing the importance of digital innovation in enhancing the overall university experience. By providing a platform that goes beyond conventional mapping applications, UniNav 3D is positioned to set a new standard for campus navigation, establishing Capiz State University Pontevedra as a pioneer in leveraging technology for the benefit of its academic community.

**(9-A) Project Description** (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

The UniNav 3D project of Capiz State University Pontevedra aims to transform the campus navigation experience using advanced 3D mapping technology. Starting with an analysis of current navigation challenges, the project involves collaboration between developers, designers, and university stakeholders. The plan includes selecting optimal technology, iterative design phases, user training, and deployment across the campus. UniNav 3D is designed to address specific user needs and enhance the overall campus experience through efficient navigation.

**(10) Objectives/Statement of the Problem** (for Social Sciences ) (Statement of the specific purpose to address the problem areas of the project.)

### General Objective

Generally, this study aims to develop a 3D application for the university navigation of Capiz State University Pontevedra and determine its acceptability.

### Specific Objectives

The specific objectives of the study are the following:

1. Design and develop a 3D university navigator that offers the following modules:
  - a. Interactive 3D Maps
  - b. Real-time Location Tracking
  - c. Personalized Routes
  - d. Campus Points of Interest
  - e. Announcement and Alerts
  - f. Feedback and Ratings
  - g. Offline Mode

2. Design and develop a 3D university navigator that offers the following features:

- a. System Security
- b. Database Feature
- c. 3D Campus Map Feature
- d. Navigation Assistance Feature
- e. Resource Location Feature
- f. Notification Feature
- g. Accessibility Feature
- h. Report Generation Feature

**(11) Review of Literature/Prior Art Search** (Related researches/activities that have been conducted. State-of –the-art of current technology/information from which the project proposal will take-off).

**SmartCampus: Enhancing Campus Navigation through Augmented Reality (2021) by Johnson, M., & Smith, A.**

This study investigates the implementation and impact of an augmented reality-based campus navigation system, SmartCampus. The research explores how augmented reality features enhance the user experience, offering real-time navigation cues and interactive campus information. Findings reveal improved navigation efficiency and increased user satisfaction.

**Navigating Tomorrow: A Comparative Analysis of 3D and Augmented Reality Navigation Apps in Higher Education (2018) by Garcia, R., & Kim, J.**

This comparative analysis examines the effectiveness of 3D and augmented reality navigation applications in higher education settings. The study assesses user preferences, ease of use, and navigation accuracy. Results provide insights into the strengths and limitations of each technology, helping institutions make informed decisions in adopting navigation solutions.

**VirtualCampus: Exploring the Feasibility of Virtual Reality for University Navigation (2020) by Wang, Q., & Chen, L.**

VirtualCampus investigates the feasibility and user acceptance of a virtual reality-based navigation system for university campuses. The research assesses the impact of virtual reality on spatial awareness and navigation efficiency. Results indicate positive user experiences, highlighting the potential of virtual reality in enhancing campus navigation.

**MobileMaps: Evaluating the Effectiveness of Mobile-Based University Maps (2019) by Martinez, S., & Brown, E.**

MobileMaps focuses on evaluating the effectiveness of mobile-based university maps in improving campus navigation. The study explores user satisfaction, accuracy, and usability of mobile map applications. Findings contribute to the understanding of the role of mobile maps in enhancing the overall campus experience.

**NavTech: A Case Study on the Integration of Beacon Technology for Campus Navigation (2017) by Lee, H., & Yang, K.**

NavTech examines the integration of beacon technology for campus navigation, providing users with location-specific information. The study evaluates the impact of beacon technology on real-time navigation and user engagement. Results highlight the potential of beacon technology in creating personalized and context-aware navigation experiences.

**(12) Scientific Basis/Theoretical Framework** (Include concepts, theories, and variables that indicate relevant relationships to be tested.)

**Spatial Navigation Theory:**

This framework focuses on the principles of spatial cognition and navigation in 3D environments. It draws upon theories from psychology and cognitive science to understand how users perceive and navigate through physical and virtual spaces.

#### **Human-Computer Interaction (HCI) Framework:**

Grounded in HCI principles, this framework emphasizes the design and interaction aspects of the 3D application. It considers user interface design, usability, and user feedback to ensure a seamless and user-friendly experience.

#### **Augmented Reality (AR) Integration Framework:**

This framework focuses on incorporating AR technologies to enhance the user's perception of the physical world with digital overlays. It considers the integration of real-world campus elements with virtual information.

#### **Information Architecture Theory:**

Rooted in information science, this framework emphasizes the organization and structure of information within the application. It includes principles of categorization, labeling, and information hierarchy.

#### **Social Constructivism Framework:**

This framework is based on social constructivism, emphasizing collaborative learning and knowledge construction. It considers the application as a platform for users to share and contribute information about the campus environment.

#### **Gamification Theory:**

Drawing on principles of gamification, this framework involves incorporating game elements into the application to enhance user engagement and motivation. This can include rewards, challenges, and interactive features.

**(13) Methodology** (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

#### **MATERIALS**

The materials to be used in conducting this study and in creating the UniNav 3D: University Navigator Application of Capiz State University Pontevedra are as follows,

- Laptop or Personal Computer
- Mobile Phone
- Wi-Fi Router or Broadband or Data Connection

#### **HARDWARE SPECIFICATIONS**

| <b>Hardware</b>                 | <b>Minimum Requirements</b>         |
|---------------------------------|-------------------------------------|
| Computer or Laptop              | 4 GHz minimum, multi-core processor |
| Mobile Phone                    | Android 8.0+                        |
| Memory (RAM)                    | At least 4GB                        |
| Hard Disk Space                 | At least 10 GB                      |
| Wi-Fi Router or Data Connection | At least 4G connectivity            |

## DEVICE COMPATIBILITY

- Android 8+
- iOS

## SOFTWARE DESIGN MODEL

### Software Development Life Cycle (SDLC)

#### Iterative Development Model

In Iterative Model, iterative process starts with a simple implementation of a small set of the software requirements and iteratively enhances the involving version until the complete system is implemented and ready to be deployed. At each iteration, designed modifications are made and new functional capabilities are added. The basic idea behind these methods is to develop a system through repeated cycles and in smaller portion at a time.

Below is the visualization of the Iterative Model to be used in this study.

Figure 1. Iterative Model of the proposed system

### Conceptual Framework

Figure 2. Conceptual Framework of the study

|                                                                                   |                 |                                                |                |                          |
|-----------------------------------------------------------------------------------|-----------------|------------------------------------------------|----------------|--------------------------|
|  | Document Type:  | <b>DOCUMENTED INFORMATION</b><br>ISO 9001:2015 | Document Code  | <b>RES- RP-01</b>        |
|                                                                                   | Document Title: | <b>RESEARCH PROPOSAL</b>                       | Revision No.   | <b>00</b>                |
|                                                                                   |                 |                                                | Effective Date | <b>November 30, 2019</b> |
|                                                                                   |                 |                                                | Page           | Page 6 of 10             |

### Research Design (Acceptability of the System)

For the acceptability of the design, a descriptive type of research will be used. A standardized questionnaire is formulated, and the acceptability of the design will be done by the respondents.

### Sample Size and Sampling Techniques

There will be fifty (50) respondents to be sampled in the study.

### Locale of the Study

Capiz State University Pontevedra, Bailan, Pontevedra, Capiz.

### Respondents of the Study

The students, faculty and staff Capiz State University Pontevedra campus will be the respondents of the study.

### Research Instruments

The system will be tested for final evaluation or acceptability by the end users using the ISO 25010. It will be evaluated in terms of product quality such as functional suitability, performance efficiency, compatability, usability, reliability, security, maintainability and portability, and quality in use such as effectiveness, efficiency, satisfaction, freedom from risk and context coverage.

### Data Gathering Procedures

A total of fifty (50) respondents will view and analyze the website and will be given the questionnaire for them to be answered. To make data analysis easier, a tally sheet will be provided wherein the responses of the respondents will be recorded. To avoid repetition of encoding the responses, the questionnaires will be consecutively numbered. The gathered data will be tabulated and prepared for analysis.

### Scoring of Responses

The acceptability of the UniNav 3D: University Navigator Application of Capiz State University Pontevedra will be rated by the respondents using the scoring below:

| Range of Score | Verbal Interpretation | Description                                                       |
|----------------|-----------------------|-------------------------------------------------------------------|
| 4.5 – 5.0      | Highly Accepted       | Respondent agrees to all the features of the system.              |
| 3.5 – 4.49     | Accepted              | Respondent agrees to about 80% of the system's features.          |
| 2.5 – 3.49     | Moderately Accepted   | Respondent is satisfied with the features it offers.              |
| 1.5 – 2.49     | Slightly Accepted     | Respondent is slightly beginning to dislike some of its features. |
| 1.0 – 1.49     | Unaccepted            | Respondent doesn't accept all the features of the system.         |

### Data Analysis Procedures

When all responses to each aspect of acceptability of questionnaire were gathered and results were tallied, they were then tabulated and categorized for mathematical and statistical analysis using the following statistical tools:

|                                                                                   |                 |                                                |                |                          |
|-----------------------------------------------------------------------------------|-----------------|------------------------------------------------|----------------|--------------------------|
|  | Document Type:  | <b>DOCUMENTED INFORMATION</b><br>ISO 9001:2015 | Document Code  | <b>RES- RP-01</b>        |
|                                                                                   | Document Title: | <b>RESEARCH PROPOSAL</b>                       | Revision No.   | <b>00</b>                |
|                                                                                   |                 |                                                | Effective Date | <b>November 30, 2019</b> |
|                                                                                   |                 |                                                | Page           | Page 7 of 10             |

**Mean.** The statistical tool that measures central tendency as the sum of all scores divided by the number of cases. In this study it is used to calculate the average central tendencies of any group of responses. The formula for solving the mean is:

$$M = \frac{\sum x}{n}$$

where:  $\sum x$  = the sum of the scores  
 $n$  = number of respondents

**Standard Deviation.** A statistical tool that measures the dispersion of a data set relative to its mean and is calculated as the square root of variance. The formula for solving the standard deviation was:

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n - 1}}$$

where:  $n$  = The number of data points  
 $x_i$  = Each of the values of the data  
 $\bar{x}$  = The mean of  $x_i$

**(15) Expected Output** (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible.)

The expected output of the study is the UniNav 3D: University Navigator Application of Capiz State University Pontevedra

Specific expected outputs:

1. An interactive 3D map that enhances the campus navigation offering users a visually immersive experience.

|                                                                                   |                 |                                                | Page           | Page 8 of 10             |

2. A Real-time Location Tracking that ensures precise navigation allowing users to accurately locate themselves within the campus.
3. A Personalized Routes that tailors navigation experiences accommodating individual preferences for a customized journey across the campus.
4. A Campus Points of Interest that simplifies campus exploration by highlighting points of interest, including buildings, landmarks, and facilities, to enrich the user's navigation experience.
5. An Announcement and Alerts that keeps the university community informed with timely announcements ensuring users are updated on events, changes, and emergency situations.
6. A Feedback and Ratings feature that values user engagement, providing a platform for feedback and ratings, enabling users to contribute to the ongoing improvement and functionality of the application.
7. An Offline Mode that enhances the accessibility allowing users to navigate essential features even without an internet connection, ensuring reliable functionality.

**(15) Technology Transfer Activity Design** (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

A technology transfer activity design of the UniNav 3D: University Navigator Application of Capiz State University Pontevedra as an extension activity of the campus could be designed as follows:

1. Development of the UniNav 3D: Based on the identified needs, design and develop the UniNav 3D: University Navigator Application, this could involve hiring IT professionals and web developers to enhance the website and the necessary features.
2. Training and capacity building UniNav 3D: University Navigator Application has been developed, conduct training and capacity-building activities for university staff, including the IT team, department heads, and front-line staff. This will ensure that they have the necessary skills to operate and maintain the system.
3. Pilot testing: Conduct a pilot test of the UniNav 3D: University Navigator Application to identify any glitches or issues that need to be addressed. This can be done by selecting a small group of students to use the system and provide feedback.
4. Launch and dissemination: Once the UniNav 3D: University Navigator Application has been fully developed and tested, launch it to the entire university community. This can be done through an official launch event, promotional materials, and targeted communication to different departments and units.
5. Maintenance and updates: Ensure that the UniNav 3D: University Navigator Application is regularly maintained and updated to keep it running smoothly and efficiently. This will involve regular checks for bugs, updates to security features, and improvements to functionality based on user feedback.
6. Evaluation and feedback: Conduct an evaluation of the UniNav 3D: University Navigator Application to assess its impact and effectiveness. This can be done through surveys, focus group discussions, and usage data analysis. Use this feedback to improve the system further and to inform future technology transfer activities.

**(16) Targets Beneficiaries** (Who the clientele are and what are the expected outcome/effects of the use of the projects output)

This study was conducted to help the Capiz State University – Pontevedra Campus to provide accessible university navigation. Moreover, the application to be develop in this study will be beneficial to both the institution and its clientele.

Hence, this study will be beneficial to the following:

|                                                                                   |                 |                                                |                |                          |

**Students** - UniNav 3D benefits students by providing efficient navigation around the campus, helping them easily find classrooms, facilities, and events to enhance their overall university experience.

**Faculty and Staff** - Faculty and staff at Capiz State University optimize their movement within the campus using UniNav 3D, ensuring punctuality for classes, meetings, and events while efficiently coordinating and managing activities.

**Visitors and Guests** – UniNav 3D assists visitors and guests in easily orienting themselves within Capiz State University, allowing them to locate specific buildings, departments, and services for a more enjoyable campus visit.

**Differently-Abled Individuals** - UniNav 3D ensures inclusivity by providing accessibility features, allowing differently-abled individuals to easily navigate ramps, stairs, and other accessible facilities on campus.

**Security Personnel** - Security personnel use UniNav 3D to monitor campus movements, ensuring the safety and security of the university community while coordinating effective emergency responses.

**Prospective Students and Parents** - Prospective students and their parents benefit from UniNav 3D during campus tours and orientation, exploring the campus and obtaining information about facilities, departments, and events.

#### (17) Personnel Requirement

| Name                          | Role<br>(Program, Project,<br>Study Leader) | Field of Specialization |
|-------------------------------|---------------------------------------------|-------------------------|
| <b>Venus B. Dorado</b>        | Project Leader                              | Computer Science        |
| <b>Michael John D. Moneva</b> | Member                                      | Computer Science        |
| <b>Roden D. Pelegrino Jr</b>  | Member                                      | Information Technology  |
| <b>Shawn A. Dacles</b>        | Member                                      | Computer Engineering    |
| <b>Virginia G. Figueroa</b>   | Member                                      | Computer Science        |

#### Percent Time Devoted to the Program/ Project/ Study

**Program/Project Leader (in hours): 80 hours**

**Program/Project Members (in hours): 40 hours**

#### (18) Budgetary Requirement

| SOURCES OF EXPENSES                                                                                                           | Quantity | Amount (Php)      |
|-------------------------------------------------------------------------------------------------------------------------------|----------|-------------------|
| <b>A. Personnel Services</b> (For studies needing Research Assistants, Informant/s, Guide)<br>a. 3D Designer<br>b. Programmer | <b>2</b> | <b>₱20,000.00</b> |
