(9A) Abstract

This study aimed to develop an enhancement program through an assessment of the soft skills, grammar, and self-efficacy skills of the student interns of CAPSU Pilar. This research used a descriptive quantitative research design that focused on assessing the current levels of soft skills among student interns, analyzing the student interns' proficiency in grammar, and evaluating their levels of self-efficacy. The data was then processed and the results were used to create an enhancement program. The results showed that the student interns need improvement in terms of their soft skills, grammar proficiency, and self-efficacy. An enhancement program was then proposed to address the identified gaps.

(9B) Keywords

soft skills, grammar proficiency, self-efficacy, student interns, enhancement program

(10) Introduction

Internships play a major role when preparing a learner for the workforce prior to their graduation. It is where they are tested for the skills they have accumulated over the years through a series of real world problems that they have to overcome. According to Zhao & Liden (2011), both the organization that the interns are working for, as well as the interns themselves are doing a substantial in terms of hiring and being hired. Prior to the process, student interns are given the option to choose the company that they'd want to have their internship in. These interns do it with the intent of studying how certain industries and jobs work, and if they are fit enough to adjust to these workplaces. (Rothman & Sisman, 2016). Thus, this is where self efficacy comes in.

Soft Skills are the people skills necessary to interview, develop and maintain a relationship with one's employer and co-workers, successfully work with customers, and develop a sense of personal responsibility and accountability. The success of the workforce and the development of human capital depend heavily on "soft skills." An increasing body of research demonstrates that these attributes are just as predictive of employment and incomes as academic or technical abilities (Kautz, Heckman, Diris, ter Weel, & Borghans, 2014). Over the past 20 years, the need for these abilities has grown as workplaces throughout the world have modernized (Balcar, 2014; Carnevale, 2013; Eger & Grossmann, 2004; International Labour Organization, 2008). However, a "gap" in soft skills is seen by several companies worldwide, who state that job seekers do not possess the soft skills required to fill open jobs (Manpower Group, 2013).

Tsai et al. (2017) highlighted that relationship among the students' learning motivation, off-campus internship efficacy, career decision self-efficacy, and career preparations. It helps them navigate through different challenges and adapt in their work through experience. As stated in their research, it can affect their rate of learning and acquiring skills. Interns that has a high self-efficacy would tend to be more confident to learn and are open to a wide range of ideas, concepts and perspectives. They also have a different viewpoint whenever they are faced with adversities; looking at it as an opportunity rather than a hindrance. With this mindset, the student interns won't feel pressured with the tasks and challenges that they'll face, and they will be able to develop an intrinsic motivation where they are giving themselves room for growth. It also gives them a sense of readiness prior to them joining the workforce. Through self-efficacy, the students of CAPSU Pilar will be able to easily adapt to challenges given to them by their different employers, and will have the initiative to grow and the potential to pursue lifelong learning.

Soft skills and grammar on the other hand, are a set of tools used by the learners that acts as a medium to conduct tasks within a workplace. Based on the study of Dabke (2015), the satisfaction of employers are much higher for student interns who has a high rating with specific soft skills (Skills that are tailored to the industry that they are working for). In terms of grammar, it also plays a major role in communication, customer relation, and other tasks that involves using the English medium, especially in the field of teaching, hospitality management, and business administration courses of the satellite college where the student interns will most likely deal with other individuals. It is also highlighted in the study of Zahedpisheh, Abu Bakar, and Saffari (2017), that the English used by tourism and hospitality purposes (ETP) is important for its day to day functions, which is also true for the other courses offered by the satellite college.

This study aimed to develop an enhancement program through an assessment of the Soft Skills, Grammar, and Self-Efficacy skills of the student interns of CAPSU Pilar. Specifically, this study aimed to determine:

1. What is the level of soft skills among student in terms of communication and interpersonal skills, teamwork and collaboration, adaptability and flexibility, time management and organization, leadership and initiative, problem solving, technical skills and critical thinking and self-management and professionalism?
2. What is the grammar proficiency level of the student interns?
3. What is the level of self-efficacy among student interns?

			Effective Date	
			Page	Page 3 of 10

4. Formulate an enhancement program to address the gap and Boost the Soft Skills, Grammar, and Self-Efficacy of Student Interns.

(11) Materials and Methods or Methodology

Research Design

The soft skill assessment was anchored to the study of Gibb (2014) where he used three separate theories to help in definitively measuring and funneling a broad range of soft skills that an individual might have. These theories are control theory, goal theory and attribution theory.

Control theory can interpret an individual's behavior through the framework of systems and control loops that emphasizes the self-regulation for their successful operation. The highlight of this process is feedback loops. Feedback can be identified as the information that shows the difference between a desired level of reference and the actual performance level, and it can bridge the gap in the data. Learners are expected to actively seek and value feedback until the identified gap is resolved. For soft skills assessment to be effective under this theory, the system parameters must be defined, meaning there should be a definitive information of what establishes soft skills.

Goal setting theory explains the cognitive, emotional, and social aspects of an individual's behavior, including the performance of soft skills that align with their goals and attributes. Effective goals need to be specific to that person and must be challenging, yet achievable. It provides a certain distance to their current capabilities, but at the same time, it is within reach. The social aspect of this theory is particularly prominent, acknowledging the importance of involving or considering various parties and stakeholders in the goal-setting process.

Attribution theory explains behaviour's cognitive, emotional, and social aspects by examining how individuals attribute causes internally or externally. Internal attributions of causality refer to attributing outcomes to oneself, while external attributions involve assigning causality to others or the situation. Typically, positive outcomes are attributed to internal factors, whereas negative outcomes are often ascribed to external factors. As a result, success is generally seen as a validation of oneself, whereas failure is more commonly attributed to external circumstances.

The assessment for self-efficacy is anchored on the study of Williams and Rhodes (2016) where they have addressed how these assessments are conducted. Their study is also anchored on the study of Bandura (1997, 1986, 1997, 2004), which is the self-efficacy theory.

A few of the key points relevant to this study are: (1) Assessing self-efficacy in the context of health behavior, which focuses on the perceived capability to perform how an individual reacts despite the different conditions or obstacles. This also includes their habits and responses to various rules and prohibitions. (2) Assessing the 'Can you do this' behavior. Self-efficacy assessments, whether they focus on specific tasks or are evaluated under different circumstances such as self-regulatory or coping self-efficacy, usually require individuals to evaluate their self-perceived confidence in their ability to perform the intended behavior. (3) Self-efficacy as either a perceived capability or motivation. The debate over self-efficacy as a form of motivation has real consequences for understanding and promoting changes in behaviors that are mostly concerned with health. When respondents report low self-efficacy in areas like exercising, eating healthily, or stopping smoking, it's important to determine if this is due to a perceived inability to perform these actions or if it's actually indicative of a lack of motivation, which can stem from various factors.

This research used a descriptive quantitative research design that will focus on assessing the current levels of soft skills among student interns, analyzing the student interns' proficiency in grammar, and evaluating their levels of self-efficacy. The data was then processed and the results were used to create an enhancement program.

Sampling Procedure

This study used population sampling method that will be utilizing the entire population of student interns from the Bachelor of Elementary Education, undergoing the internship program during the school year 2023-2024. Currently, the BEED batch has a total number of 63.

Data Analysis Procedure

The assessment tools that for assessing the soft skills was adopted from different standardized tests such as the U.S. Montana Soft Skill Assessment, and the Soft Skill Five Point Scale. The assessment for the self-efficacy was adopted from Erickson & Noonan's (2018) formative questionnaire. The C2 proficiency standardized (Cambridge

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 4 of 10

English: Proficiency [CPE]) test was used for the grammar test. The researcher had secured permission from the owners of the assessment for it to be adopted and integrated in this study.

The data gathered from the soft skills and self-efficacy were then processed for descriptive statistics via SPSS, and will be analyzed together with the results of the grammar test in order to formulate an enhancement program that will address their difficulties and further develop their skills.

There was a six-step (6) process for the formulation of the Comprehensive Enhancement program adopted from the research of Richey and Klein (2014). First is (1) Defining Program Objectives through the data that was collected through this research. The framework of the program will depend on the level of soft-skills, grammar, and self-efficacy levels of the interns. The next step is (2) Creating the Intervention Design which used an integrated approach in crafting the activities (workshops that integrates two or three out of three aspects that the students need), active learning, and self-efficacy building. The third step was (3) the Implementation Design. The length of the implementation will depend on the time needed to address the levels of Soft Skills, Grammar, and Self-Efficacy of the interns. The fourth step was (4) Creating an Evaluation and Iteration Process which assesses the effectiveness of the enhancement program. This will then be carried out to another researchers for future study. The was (5) Designing Support and Resources that will give continuation to the enhancement efforts of the University. This way, learning will be reinforced and sustainability will be maintained. The last step was crafting a (6) Stakeholder Engagement Program which will involve various stakeholders (interns, educators, industry professionals) in the development and refinement of the program to ensure it remains relevant and effective. Afterwards, this Comprehensive Enhancement Program will be sent to the different peers and experts within the inter-campus for further review and improvement.

(12) Results and Discussions

Respondents of the Study

The socio-demographic profile of the respondents consisted of 15 male (26.3%) and 42 (73.7%) female with a total of 57 participants. 42 individuals (73.7%) were aged 20-22 years old while 15 (26.3%) of them aged 23 years old and above. In terms of family income, 54 individuals (94.7%) had a family income of 10,000 php below and only 3 individuals (5.3%) had a family income of 10,001-15,000.

Table 1. Socio-demographic Profile of the Respondents

Variable	Frequency	Percent
Sex		
Male	15	26.3
Female	42	73.7
Total	57	100.0
Age		
20-22 years old	42	73.7
23 years old and above	15	26.3
Total	57	100.0
Family Income		
10,000 & below	54	94.7
10,001 - 15,000	3	5.3
Total	57	100.0

Level of Soft Skills Among Student In Terms of Communication and Interpersonal Skills, Teamwork and Collaboration, Adaptability And Flexibility, Time Management and Organization, Leadership And Initiative, Problem Solving, Technical Skills and Critical Thinking and Self-Management and Professionalism

In terms of the level of soft skills among students, they had a total mean of 4.14 for Teamwork and Collaboration, 4.11 for Self-management and Professionalism, 4.03 for Communication and Interpersonal Skills which falls under the verbal interpretation of Meets Expectations. Whereas, the students had a mean of 3.94 for Adaptability and Flexibility, 3.92 for Leadership and Initiative, 3.87 for Time Management and Organization, and 3.84 for Problem solving, Technical Skills, and Critical Thinking, which falls under the Needs Improvement verbal interpretation. The overall mean for the level of soft skills falls under 3.99 which Needs Improvement.

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 5 of 10

Table 2. The level of soft skills among student in terms of

	Mean	Verbal Interpretation
Teamwork and Collaboration	4.14	Meets Expectations
Self-management and Professionalism	4.11	Meets Expectations
Communication and Interpersonal Skills	4.03	Meets Expectations
Adaptability and Flexibility	3.94	Needs Improvement
Leadership and Initiative	3.92	Needs Improvement
Time Management and Organization	3.87	Needs Improvement
Problem solving, Technical Skills and Critical Thinking	3.84	Needs Improvement
LEVEL OF SOFT SKILLS	3.99	Needs Improvement

Verbal Interpretation:
1-2.99 Needs Significant Improvement
3-3.99 Needs Improvement
4-5 Meets Expectations

The assessment of soft skills, grounded in Gibb's (2014) framework integrating control theory, goal theory, and attribution theory, revealed varying levels of proficiency among student interns. The interns showed a positive teamwork and collaboration skills, which aligns with the emphasis on social aspects and feedback in control theory and goal theory. Their self assessment of their own self-management and professionalism, effective communication and interpersonal skills, highlighted their capacity to regulate themselves and interact positively.

However, the need for improvement in adaptability, leadership, time management, and problem-solving skills, as indicated by mean scores below 4.0, shows that there are more potential areas for growth. These findings are in line with the observations of Kautz et al. (2014) and others, who emphasized the increasing importance of soft skills in the modern workplace and the challenges individuals face in acquiring them. The interns' relative weakness in these areas might be because of external factors or a lack of prior experience, as suggested by the attribution theory.

Grammar Proficiency Level of the Student Interns

Figure 1. Grammar Test Results

The overall proficiency level of 55.05%, categorized as "Needs Improvement," signals a significant gap in their grammar knowledge and application. Poor (35.1%) and Satisfactory (31.6%): This large portion of interns demonstrates a fundamental lack of proficiency in complex grammar structures, potentially hindering their ability to communicate effectively in writing and presentations. Needs Improvement (22.8%): This group is on the verge of achieving proficiency, indicating they possess a basic understanding but require further refinement to consistently apply grammar rules correctly. Good (10.5%): This small percentage suggests that the test is appropriately challenging and that some interns have already mastered the required grammar skills.

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 6 of 10

The overall proficiency shows a significant gap in their grammar knowledge and application, which raises concerns based on the study of Abbas et al. (2021) which highlightys the importance of English language proficiency in the global job market. The substantial proportion of interns in the "Poor" and "Satisfactory" categories indicates that a large population of interns needs intensive grammar training to enhance their communication effectiveness, particularly in written and presentation contexts, as emphasized by Zahedpisheh, Abu Bakar, and Saffari (2017) in their study.

Level of Self-Efficacy Among Student Interns

The self-efficacy assessment results shows a consistent pattern of "Needs Improvement" across all evaluated dimensions, with mean scores ranging from 3.69 to 3.95. This indicates a general lack of confidence and belief in one's abilities among the respondents.

Table 3. Self-Efficacy Levels

Self-efficacy	Mean	Verbal Interpretation
Resourcefulness	3.95	Needs Improvement
Internship-specific Self-efficacy	3.95	Needs Improvement
Coping with Unexpected Events and Challenges	3.80	Needs Improvement
Confidence and Persistence	3.69	Needs Improvement
LEVEL OF SELF-EFFICACY	3.90	Needs Improvement

The lowest mean score are in Confidence and Persistence (3.69) which suggests that the respondents struggle with maintaining motivation and perseverance when faced with challenges. The Coping with Unexpected Events and Challenges (3.80) score indicates a moderate level of difficulty in adapting to unforeseen situations and overcoming obstacles. Resourcefulness (3.95) and Internship-specific Self-efficacy (3.95) scores, while slightly higher, still fall within the "Needs Improvement" category. This suggests a need to develop problem-solving skills and enhance confidence in applying knowledge and skills in the internship context. The Overall Level of Self-Efficacy (3.90) score reflects a general need for improvement in self-belief and confidence across various domains.

The self-efficacy assessment, aligned with the principles outlined by Williams and Rhodes (2016) and Bandura's self-efficacy theory, reveals a pervasive need for improvement across all evaluated dimensions. The relatively low scores in confidence and persistence suggest that interns might struggle with maintaining motivation and overcoming challenges, hindering their ability to fully engage in the internship experience and learn from setbacks. The moderate scores in coping with unexpected events and challenges indicate a degree of vulnerability to unforeseen situations, potentially impacting their adaptability and resilience in the workplace.

While resourcefulness and internship-specific self-efficacy scores are slightly higher, they still fall within the "Needs Improvement" category, which suggests the need to enhance problem-solving skills and improve confidence in applying knowledge and skills of the interns. These findings stress the importance of interventions aimed at developing their self-belief and empowerment to navigate challenges and capitalize on opportunities during their internship, as highlighted by Tsai et al. (2017) and Cheng et al. (2019).

Enhancement Program To Address the Gap and Boost the Soft Skills, Grammar, and Self-Efficacy of Student Interns

The *Enhancement Program for Student Interns* was designed to address identified weaknesses and elevate the soft skills, grammar proficiency, and self-efficacy of participants. Grounded in research, the program encompasses a multifaceted approach to learning and development.

Grammar mastery, targeting C1-C2 levels, is achieved through intensive training focused on complex sentence structures, advanced vocabulary, and usage, which is aligned with the Common European Framework of Reference for Languages (CEFR) guidelines. In order for the institution to be able to develop resourcefulness, the workshops and exercises can reference on the principles of "The Innovator's DNA" (Kim et al., 2014), which is helpful for problem-solving, research, and creative thinking. In terms of self-efficacy can be improved through personalized goal setting, regular feedback, and opportunities to showcase skills, based on Bandura's Social Cognitive Theory (Bandura & Hall, 2018). To equip interns with coping mechanisms for unexpected events, scenario-based training, mindfulness exercises, and discussions on resilience strategies can be used while referencing "The Resilience Factor" (Reivich et al, 2023). Confidence and persistence can be reinforced through public speaking practice, positive self-talk, and discussions on overcoming setbacks, informed by the social cognitive theory of organizational management (Luszczynska & Schwarzer, 2015) Adaptability and flexibility can be developed through simulations of changing work environments, team projects with shifting roles, and

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 7 of 10

discussions on embracing change, aligning with research on adaptability in the workplace (Pulakos, 2016). Leadership and initiative are nurtured through leadership simulations, mentorship opportunities, and discussions on taking ownership, drawing on principles from "The Leadership Challenge" (Kouzes & Posner, 2023). Effective time management and organization are taught through training on prioritization techniques, calendar management tools, and task delegation, based on research on college students' time management (Valle et al., 2016). Lastly, problem-solving, technical skills, and critical thinking are developed through case studies, technical workshops, and debates, referencing "Thought and Knowledge: An Introduction to Critical Thinking" (Halpern, 2014).

These evidence-based training components was integrated to the Enhancement Program.

Enhancement Program for Student Interns			
Week	Topic	Activity	Objectives
1 - 4	Grammar Mastery (C1-C2)	Diagnostic grammar assessment, introduction to advanced grammar concepts, sentence structure analysis exercises	Assess current grammar proficiency, familiarize interns with C1-C2 level grammar, and practice complex sentence construction
5	Resourcefulness	Design thinking workshop, brainstorming session on innovative solutions to workplace challenges	Develop creative problem-solving skills, encourage out-of-the-box thinking, and promote a proactive approach to challenges
6	Internship-Specific Self-Efficacy	Personalized goal-setting workshop, shadowing experienced employees in their daily tasks	Enhance self-awareness, set achievable goals, and gain practical insights into role expectations
7	Coping with Unexpected Events and Challenges	Scenario-based training on handling difficult situations, mindfulness exercises	Build resilience, develop coping mechanisms for stress and uncertainty, and practice maintaining composure under pressure
8	Confidence and Persistence	Public speaking workshop, mock presentations, positive self-talk exercises	Improve communication skills, enhance confidence in presenting ideas, and cultivate a positive mindset for overcoming setbacks
9-10	Adaptability and Flexibility	Agile project management simulation, impromptu problem-solving tasks	Foster adaptability to changing circumstances, develop flexibility in thinking and approaches, and practice quick decision-making
11-12	Leadership and Initiative	Leadership simulation exercise, discussion on effective delegation and project ownership	Develop leadership potential, learn to motivate and guide others, and practice taking initiative in driving projects forward
13	Time Management and Organization	Training on prioritization techniques, introduction to productivity tools and calendar management apps	Enhance time management skills, learn effective organization strategies, and optimize productivity through the use of digital tools
14-16	Problem Solving, Technical Skills, and Critical Thinking	Case study analysis sessions, technical workshops specific to the internship field, structured debates on relevant topics	Sharpen analytical skills, apply critical thinking to real-world scenarios, enhance technical knowledge relevant to the internship, and develop the ability to articulate and defend arguments persuasively
17-20	Grammar Mastery (C1-C2)	Advanced grammar exercises, review of complex grammatical structures, writing practice with feedback from mentors	Solidify understanding of C1-C2 level grammar, refine writing skills, and practice applying advanced grammar concepts in real-world contexts

(13) Conclusions and Recommendations

Conclusions

Based on the findings of this study, the following conclusions are drawn:

1. In terms of the level of soft skills among student, the overall results had a mean of 3.99 which translates to 'Needs Improvement'. Soft skills in terms of Teamwork and Collaboration, Self-management and Professionalism, Communication and Interpersonal Skills had a score that translates to "Meets Expectations" while Adaptability and Flexibility, Leadership and Initiative, Time Management and Organizationk, Problem solving, Technical Skills and Critical Thinking, are in the needs improvement category.
2. The grammar proficiency of the student interns is significantly lacking, with the majority demonstrating either poor or only satisfactory skills. This indicates a fundamental gap in their understanding and application of grammar rules. While a small percentage have good grammar skills, most interns will require additional training and support to effectively communicate in professional settings.
3. The self-efficacy assessment results reveal that student interns generally lack confidence in their abilities across various dimensions. This lack of confidence is most pronounced in their ability to maintain motivation and persevere when faced with challenges. While they show slightly more confidence in their resourcefulness and internship-specific skills, there is still a clear need for improvement in these areas as well. These findings highlight the need for interventions aimed at boosting interns' self-belief and confidence in their capabilities.
4. The researcher developed Enhancement Program for Student Interns that's focused on improving the intern's skills. It covers advanced grammar, creative problem-solving, and builds confidence. Interns learn coping mechanisms, gain leadership skills, and manage their time effectively. The program also focuses on critical thinking and problem-solving, preparing interns for success in their internships and future careers.

Recommendations

Based on the drawn conclusions, the following recommendations were formulated:

1. Future researchers can research and implement a comprehensive soft skills training program that specifically focuses on areas identified as needing improvement, such as adaptability and flexibility, leadership and initiative, time management and organization, and problem-solving, technical skills, and critical thinking. It should incorporate a variety of interactive and experiential learning methods, such as workshops, simulations, role-playing exercises, and group discussions.
2. Educators must find a way to tailor intensive grammar training that is tailored to the specific needs of the interns, focusing on areas of weakness identified in the assessment. Previously, it was only given at the first few years of college in the form of English +. Better positive results can be gathered if this intensive training was consistent across the curriculum. This could involve a combination of formal instruction, practice exercises, and personalized feedback to help interns achieve mastery of C1-C2 level grammar.
3. Instructors and professors should integrate strategies to boost self-efficacy throughout the internship program. This could include setting clear and achievable goals, providing regular feedback and recognition, creating opportunities for interns to showcase their skills and accomplishments, and offering mentorship and coaching support.
4. Future researchers should further design training programs that integrate soft skills development with technical skills training and grammar instruction. This holistic approach can help interns better understand the interconnectedness of these skills and how to apply them effectively in real-world scenarios.
5. Program chairpersons should continuously assess interns' soft skills, grammar proficiency, and self-efficacy throughout the internship program to track their progress and identify areas where further support may be needed. Use this data to refine and improve the training program over time.
6. Researchers should conduct further research to investigate the effectiveness of different training interventions and identify best practices for enhancing soft skills, grammar proficiency, and self-efficacy among student interns. This research can inform the development of evidence-based training programs and contribute to the body of knowledge in this field.
