(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

This study was conducted to find out the level of awareness and preference for hyflex education of the students of Capiz State University (CAPSU)- Pilar. The respondents of the study were the 299 students of CAPSU Pilar coming from the different courses. A survey- questionnaire was used to collect the data of the study. The result showed that the respondents were aware of what hyflex education is, when grouped according to their profile, the result also showed that they are aware of hyflex education. For preference, the respondents prefer the most traditional face-to-face classes, followed by the preference for hyflex education, fully online class, and last is modular class. The result also showed that there is no significant difference between the level of awareness and preference of the respondents on hyflex education when they are grouped according to their profile. With this study, a new education system will be explored in the university and possibly be employed after thorough research and planning as Hyflex education offers enhanced flexibility, increased access, and personalized learning.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

Instruction, hybrid, flexible, learning, open university

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

The impact of the COVID-19 pandemic was huge, especially in the academic sector. Although the WHO already declared that the COVID-19 pandemic was over, its effect still lingers around academia. The students and the teachers are slowly coming back to the traditional mode of classroom teaching, however, there are those who may be left behind especially those who are in the poverty line or below. This is where Hyflex Education will come in. According to Beatty, B. J. (2019), The Hybrid-Flexible (HyFlex) course design delivers a student-directed multi-modal learning experience where they have the freedom to choose what mode they are going to attend. Hyflex education will give the learners more choice and freedom, and equal opportunity to quality education in whatever mode they may choose which is in line with Sustainable Developmental Goals Number 4 which is Quality Education. Hence, this study was conducted to find out the awareness and preference for hyflex education of the students of CAPSU Pilar.

(11) Materials and Methods or Methodology (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

This study was conducted at CAPSU Pilar and the 299 students from the six different programs officially enrolled during the 1st Semester, A. Y. 2023- 2024 served as respondents. The instrument used in this study was a validated survey-questionnaire which collected the demographic profile, awareness of hyflex education, and preference for hyflex education. The researchers first asked the approval of the satellite college director and the research chair for the conduct of the study. After the approval, the questionnaires were then distributed to the respondents electronically. After which, the data were then downloaded, tallied, analyzed, and interpreted using the SPSS software.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

Table 1

Profile of the Respondents

Socio-Demographic Profile		Frequency	Percentage
Age	18-20 years old	204	68.2
	21-23 years old	86	28.8
	24-26 years old	6	2.0
	27 years old and above	3	1.0
Civil Status	Single	293	98.0
	Married	6	2.0
Sex

with Post Graduate Degree	3	1.0
TOTAL	299	100.0%

Table 1 showed the profile of the respondents. There is a total of 299 respondents, 40 came from BEED, 30 from BSA, 39 from BSSW, 50 from BSIT, 59 from BSBA, and 81 from BSHM; 204 of them were aged 18-20 years old, 86 were 21- 23 years old, 6 were 24- 26 years old and 3 were 27 years old and above. Two hundred ninety there was single and 6 was married. There were also 130 males and 169 females. For the father's occupation, 21 was government employee, 20 from private sector, 86 was self- employed, and 172 was unemployed. For the mother's occupation, 22 government employee, 12 from private sector, 79 was self-employed, and 186 was unemployed. For father's highest educational attainment, 75 was elementary undergraduate, 46 was elementary graduate, 30 was high school undergraduate, 69 was high school graduate, 34 was college undergraduate, 40 was college graduate, and 5 had post graduate degree. For mother's highest educational attainment, 41 elementary undergraduate, 30 was elementary graduate, 37 was high school undergraduate, 103 was high school graduate, 29 was college undergraduate, and 3 had post graduate degree.

Table 2

Level of Awareness of Hyflex Education of the Students of CapSU Pilar

Level of Awareness for Hyflex Education	SD	M	Description
1. I know that Hyflex Education stands for hybrid- flexible	0.72	4.06	Aware
2. I know that Hyflex Education combines face-to-face and online learning.	0.78	4.08	Aware
3. I know that Hyflex Education let students choose on how to attend classes, either face-to-face or online, synchronously or asynchronously.	0.75	4.08	Aware
4. I know that Hyflex Education considers technology as one of its crucial factors.	0.72	4.09	Aware

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 4 of 8

5. I know that Hyflex Education offers students more choices in how they attend classes compared to traditional face-to-face education.	0.74	4.05	Aware
6. I know that Hyflex Education may help improve the time management skills of the students.	0.72	4.18	Aware
7. I know that Hyflex Education may meet challenges on scheduling and planning of classes.	0.73	4.10	Aware
8. I know that Hyflex Education one may struggle to balance the face-to-face attendance with online attendance.	0.82	3.97	Aware
9. I know that Hyflex Education there are challenges and drawbacks in delivering instruction.	0.72	4.02	Aware
10. I know that Hyflex Education aims to make online and face-to-face learning experiences equal for students.	0.80	3.98	Aware
11. I know that Hyflex Education wants to provide accessibility and inclusivity in education regardless with the mode of instruction.	0.73	4.03	Aware
12. I know that Hyflex Education provides students with flexibility in their learning.	0.75	4.06	Aware
13. I know that Hyflex Education allows students to tailor their learning experience to their preferences.	0.77	3.94	Aware
14. I know that Hyflex Education offers more choices to students on how they would attend their classes compared to traditional face-to-face classes.	0.76	4.00	Aware
15. I know that Hyflex Education promotes learner autonomy and self-directed learning.	0.73	3.98	Aware
16. I know that Hyflex Education the students need to balance the different learning modes (online and face-to-face) to have a meaningful learning experience.	0.72	4.06	Aware
17. I know that Hyflex Education offers equivalency where both online and face-to-face attendees will receive the same quality of education.	0.79	3.96	Aware
18. I know that Hyflex Education provides learning activities in all participation modes which lead to equivalent learning outcomes.	0.74	4.02	Aware
19. I know that Hyflex Education involves efficiently repurposing course materials for multiple sessions.	0.79	3.96	Aware
20. I know that Hyflex Education leads to more time- efficient course development because of reusability of course materials.	0.74	3.98	Aware
21. I know that Hyflex Education there is a need to frequently update and revise the course materials.	0.74	3.98	Aware
22. I know that Hyflex Education may lead to better engagement with course materials as they can access it anytime.	0.71	3.98	Aware
23. I know that Hyflex Education helps in cost- saving of the institutions because of the reusability of the learning materials.	0.74	3.96	Aware
24. I know that Hyflex Education finds it challenging to address diversity in learning.	0.78	3.94	Aware
25. I know that Hyflex Education is being hindered by lack of training and resources for it to be more accessible.	0.78	3.92	Aware
GRAND TOTAL	0.61	4.02	Aware

Note: 4.21 – 5.00 Very Aware; 3.41 – 4.20 Aware; 2.61 – 3.40 Moderately Aware; 1.81 – 2.60 Fairly Aware; 1.00 – 1.80 Not Aware

Table 2 showed that the respondents were aware of hyflex education with standard deviation of 0.61 and mean of 4.02. This is in agreement to the study of Kohnke, Lucas & Moorhouse, Benjamin. (2021) where findings suggest that while there were communication challenges between students who attended through different modes, participants did appreciate the flexibility it afforded. The utilisation of various features of the video-conferencing software and other digital tools were seen as essential to the effectiveness of HyFlex.

Table 3

Level of Awareness of Hyflex Education when Students are Grouped According to Age, Civil Status, Sex, Course, Father's Occupation, Mother's Education, Father's Highest Educational Attainment, and Mother's Educational Attainment

Profile	Level of Awareness of Hyflex Education

			Page	Page 5 of 8

	<i>N</i>	<i>SD</i>	<i>M</i>	<i>Description</i>
Age	299	.61	4.02	Aware
Civil Status	299	.61	4.02	Aware
Sex	299	.61	4.02	Aware
Course	299	.61	4.02	Aware
Father's Occupation	299	.61	4.02	Aware
Mother's Occupation	299	.61	4.02	Aware
Father's Highest Educational Attainment	299	.61	4.02	Aware
Mother's Highest Educational Attainment	299	.61	4.02	Aware

Note: 4.21 – 5.00 Very Aware; 3.41 – 4.20 Aware; 2.61 – 3.40 Moderately Aware; 1.81 – 2.60 Fairly Aware; 1.00 – 1.80 Not Aware

Table 3 showed the level of awareness of Hyflex Education when students are grouped according to age, civil status, sex, course, father's occupation, mother's highest educational attainment, father's highest educational attainment, and mother's educational attainment. It was shown that the respondents were aware of Hyflex education when they were grouped according to their profile with the SD of .61 and Mean of 4.02.

Table 4

Students' Preference for Hyflex Education

Students' Preference for Hyflex Education	Frequency	Percentage
Traditional face to face classes	219	73.2
HyFlex Education	73	24.4
Full Online Classes	4	1.3
Modular Classes	3	1.0
TOTAL	299	100.0%

Table 11 showed the preference for hyflex education of the respondents. It showed that 73.2% prefers the traditional face-to-face classes, 24.4% prefers hyflex education, 1.3% prefers the full- online class, and only 1% prefers the modular classes. The result is in line with the study of Nina B. Eduljee, Laurie Murphy, Meredith Emigh-Guy & Karen Croteau (2023), which stated that Student perceptions about their HyFlex classes indicated that they felt challenged in their classes and that course materials were available to them "during" and "after" class. Students also felt a lack of "connection" with other students in the class and were unsure if HyFlex improved their learning. Some of the aspects students liked about the HyFlex model included the "freedom to choose whether to attend in-person or virtually" (66.9%) and "flexibility to view lectures at my own pace" (55.4%), while aspects of the HyFlex model they did not like included "technology issues" (67.5%) and "not enough interaction with my classmates" (60.7%).

Table 5 showed the significant difference between the level of awareness and preference of the students of CAPSU Pilar when grouped according to their sex, age, course, civil status, parents' occupation, and parents' highest educational attainment. There is no significant difference ($F=1.798$, $p=.148$) on the level of awareness about Hyflex education among students when they are grouped according to age. Regardless of age, students of CapSU Pilar have comparable level of awareness about Hyflex education. There is no significant difference ($t=.550$, $p=.583$) on the level of awareness about hyflex education among students when they are grouped according to civil status. Regardless of civil status, students of CapSU Pilar have comparable level of awareness about hyflex education. There is no significant difference ($t=.700$, $p=.485$) on the level of awareness about hyflex education among students when they are grouped according to sex. Regardless of sex, students of CapSU Pilar have comparable level of awareness about hyflex education. There is no significant difference ($F=1.327$, $p=.253$) on the level of awareness about hyflex education among students when they are grouped according to course. Regardless of course, students of CapSU Pilar have comparable level of awareness about hyflex education. There is no significant difference ($F=.992$, $p=.397$) on the level of awareness about hyflex education among students when they are grouped according to father's occupation. Regardless of the students' father's occupation, students of CapSU Pilar have comparable level of awareness about hyflex education. There is no significant difference ($F=.638$, $p=.591$) on the level of awareness about hyflex education among students when they are grouped according to mother's occupation. Regardless of the students' mother's occupation, students of CapSU Pilar have comparable level of awareness about hyflex education. There is no significant difference ($F=.609$, $p=.723$) on the level of awareness about hyflex education among students when they are grouped according to father's highest educational attainment. Regardless of the students' father's highest educational attainment, students of CapSU Pilar have comparable level of awareness about hyflex education. There is no significant difference ($F=1.163$, $p=.326$) on the level of awareness about hyflex education among students when they are grouped according to mother's highest educational attainment. Regardless of the students' mother's highest

educational attainment, students of CapSU Pilar have comparable level of awareness about hyflex education.

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

Based on the results of the study, it can be concluded that the respondents are aware of Hyflex Education, they also prefer the most traditional face-to-face classes, followed by the preference for Hyflex education, fully online classes, and last is modular classes. The result also showed that there is no significant difference between the level of awareness and preference of the respondents on Hyflex education when they are grouped according to their profile.

Based on these results, it can be recommended that the university may develop a plan on how to deliver Hyflex education and acquire materials for its development. The university may also seek out linkages and benchmarks on other universities that are already implementing Hyflex education, distance learning, and open university. It is also recommended that the teachers may undergo thorough trainings and seminar- workshops on how to handle hyflex education.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.

(17) Acknowledgments (Include only important persons and institutions with involvement in funding and conduct of the research. Justify paragraphs with main headings in caps.)

First and foremost, the researchers would like to thank the Almighty God for His guidance and provision in the completion of this study. The researchers would also like to thank to Jennifer P. Benlior, DPA, Satellite College Director, for her support during the conduct of this study. The researchers would also like to thank Philomel Innocent P. Obligar, MAT, Research Chair, for his encouragement in the completion of this study. Heartfelt thanks is also extended to the students of CAPSU Pilar for their cooperation who served as respondents of this study; to the faculty and staff of CASPU Pilar and to the family of the researchers, greatest gratitude is extended.

(18) References (It should include only works mentioned in the text and should be arranged alphabetically. Citations shall not be less than 13 entries. This must follow the APA latest edition format, in hanging indentation with 12-point space in between.)
