(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

The COVID19 pandemic brought significant in the education sector, and also it brought new academic stress to the academe as one needed to adapt immediately with little to no competency building or orientation being conducted. With sustainable development goals number four which is quality education in mind, this study was conducted to answer the following objective. To determine the level of the academic stress of the first year Bachelor of Elementary Education students of CAPSU Pilar, to determine the level of academic stress of first year Bachelor of Elementary Education students of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self-inflicted stress; to determine if there is a significant difference on the level of academic stress of first year education students of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self-inflicted stress when grouped according to respondents' age, sex, father's occupation, mother's occupation, father's education and mother's education, and to identify the cause of academic stress of first year BEED students of CAPSU Pilar.

This study was conducted among the first year BEED students of CAPSU Pilar using survey questionnaire and in depth interview. The result of this study showed that the students' academic stress was high. The students were moderately stressed on teachers' stress, results stress, peer stress, and self-inflicted stress. They were highly stressed on tests stress, studying in group stress, and time management. There is a significant difference on test stress when respondents are grouped according to father's occupation. The rest of the data showed that there is no significant on stress the respondents' experience. Thus, teachers' stress, result stress, studying in groups stress, peer stress, time management stress, and self-inflicted stress are comparable among respondents when they are grouped according to age, sex, father's occupation, mother's occupation, father's education, and mother's education. Lastly, the cause of academic stress of the first year education students were internet connectivity, cellular load, and time management.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

stressors, academe, education, stress scale

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

The education sector of the Philippines is facing a great challenge on how it would continue to provide quality education to its learners because of the COVID19 Pandemic. The schools were closed abruptly and face to face teaching was cancelled to avoid acquiring the deadly coronavirus. The traditional classroom teaching was replaced with the different forms of distance learning like the modular learning and online learning. With the sudden changes in the mode of learning, both the students and the teachers needed to adjust to the new normal and to reinvent themselves to cope up with the new learning process. However, this change brought new academic stress to the academe as one needed to adapt immediately with little to no competency building or orientation being conducted. The students who have been struggling in the school before is now facing a new challenge in the new normal setting of the curricula.

Excessive levels of academic stress can result in an increased prevalence of psychological and physical problems like depression, anxiety, nervousness and stress related disorders, which in turn can affect their academic results. Anxiety as a disorder is seen in about 8% of adolescents and children worldwide. Anxiety and stress have a substantial negative effect on their social, emotional and academic success. Depression is becoming the most common mental health problem college students suffer these days. It is also a reflection of an individual's academic frustration, academic conflict, academic anxiety and academic pressure. The four components of academic stress usually identifiable in a student are academic frustration, academic conflicts, academic anxieties and academic pressures (Thakkar, A., 2018).

High school students are experiencing rising stress levels and lower engagement with learning since the start of the COVID-19 pandemic. They are more stressed than they were before the pandemic, they have more work, they are less engaged in school, and their relationships with teachers and [other] kids are strained (Stanford University, 2021).

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 3 of 10

This study is built from Academic Stress Theory by Campbell-Phillips, Halder, & Hasib (2020), which states that personal inadequacy, fear of failure, interpersonal difficulties with teachers, teacher-student relationships, and inadequate study facilities were concerns of academic stress. COVID-19 outbreak in terms of psychological outcomes changes students' focus on studies. Indeed, the COVID-19 pandemic has its global impact affecting today's learners academic life (Zurlo, Cattaneo, & Vallone, 2020).

While students' experiences can vary wildly depending on their personal circumstances, chemistry students and others in STEM (science, technology, engineering, and mathematics) tend to share certain difficulties. Some have lost career-building internships or opportunities to participate in research. Some face difficulties in completing their research projects or uncertainty in the job market. The pandemic has also cost some students much-needed income, left them fearing infection, and taken loved ones' lives. Since the pandemic began spreading across the world nearly a year ago, some of the students who have continued with online learning have made the best of the switch, developing strategies, like taking better notes, to compensate. Nevertheless, many students continue to struggle with distance learning (Parry, W., 2021).

The aim of this study was to determine the level of academic stress of the first year Bachelor of Elementary Education students of CAPSU Pilar amidst the COVID19 Pandemic. Identifying the level of the the academic stress of the students of CAPSU Pilar will help determine on the outreach or intervention program that can be conducted by the university to help the students and the results of this study will be used to improve the curricula in the new normal setting which will lead to the achievement of sustainable development goals number four which is quality education. Specifically, this study aimed to 1) to determine the level of the academic stress of the first year Bachelor of Elementary Education students of CAPSU Pilar; 2) to determine the level of academic stress of first year Bachelor of Elementary Education education students of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self inflicted stress; 3) to determine if there is a significant difference on the level of academic stress of first year education students of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self- inflicted stress when grouped according to respondents' age, sex, father's occupation, mother's occupation, father's education and mother's education and 4) to identify the cause of academic stress of first year BEED students of CAPSU Pilar.

(11) Materials and Methods or Methodology (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

METHODOLOGY

METHOD

Since this study was focused on level of academic stress of the first year Bachelor of Elementary Education students of CAPSU Pilar amidst the COVID19 Pandemic, the descriptive method was the most appropriate method to use. The purpose of employing the descriptive method was to describe the nature of a condition, as it took place during the time of the study and to explore the cause or causes of a particular condition. According to Creswell (2014), this design embodied inferential questions that ask for the difference in the characteristics of specific variables of interest between groups of respondents, usually categorized according to their profiles. It is primarily a quantitative research technique in which the researcher administers a survey questionnaire to a sample or an entire population of individuals to describe their attitudes, opinions, behaviors, experiences, or other characteristics of the population. The researcher opted to use this kind of research considering the desire to acquire first hand data from the respondents so as to formulate rational and sound conclusions and recommendations for the study. The survey is appropriate in this study because it enables the researcher in formulation of generalizations.

RESPONDENTS

The respondents in this study were 67 first year BEED students of Capiz State University, Pilar Satellite College, Natividad, Pilar, Capiz and was chosen through universal sampling.

Table 1. Distribution of the respondents according to their profile

Profile	Frequency	Percent
Sex

DATA GATHERING INSTRUMENT

A survey-questionnaire was used as an instrument to collect relevant data required from the participants. The instrument is composed of two parts. The instrument used in this research was a academic stress survey questionnaire by Rao, R. (2022) which was modified and was composed of two parts namely: Part I for the demographic profile and Part II for Academic Stress.

The respondents in this study were 67 first year BEED students of Capiz State University, Pilar Satellite College, Natividad, Pilar, Capiz. The respondents were selected through universal sampling.

The descriptive statistics used in this study were the mean and standard deviation. For the inferential statistics, the parametric tests were used since the data were determined projecting a normal distribution. The analysis of variance (ANOVA) and t-test were used and was set at .05 alpha.

The following scale was used to interpret the mean for the level of stress of students.

Arbitrary Scale	Adjectival Description	Interpretation
4.21 – 5.00	Completely Agree	Very Highly Stressed
3.41 – 4.20	Agree	Highly Stressed
2.61 – 3.40	Somewhat Agree/Disagree	Moderately Stressed
1.81 – 2.60	Disagree	Not Stressed
1.00 – 1.80	Completely Disagree	Very Not Stressed

DATA GATHERING PROCEDURE

Before the conduct of this study, the researchers sought the help from the experts to validate their questionnaire. After the questionnaire was validated, the researchers sought the permission of the satellite college director to conduct the study among the students. After the approval to conduct the study, the researchers sent their questionnaires to the 67 first year BEED students via Google Form. Upon the retrieval of the data, it was tallied, computer- processed, and interpreted using the SPSS software.

DATA ANALYSIS PROCEDURE

The gathered data was subjected to computer-processed using the Statistical Package for Social Science (SPSS) as follows:

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 5 of 10

Mean. This test was used to describe the data on the level of academic stress of first year BEED students of CAPSU Pilar.

Standard deviation. This test was used to describe the homogeneity and heterogeneity of the variables. *t-test* for independent samples. This test was used to compare the outcomes of two groups on the the level of academic stress of of first year BEED students of CAPSU Pilar.

Analysis of Variance (ANOVA). To determine if significant differences exist among means of level of stress, the F-test or analysis of variance, was performed. Tukey post hoc analysis was used further to determine significant differences exists among three or more groups.

Qualitative Data Analysis

For the qualitative part, data were handled using the prescribed activities stipulated in Creswell (2005). The steps involve were: organizing and preparing the data for analysis; Reading through all the data; analyzing the data with a coding process and using this to generate a description of the setting or people as well as categories or themes for analysis; and making interpretation or meaning of the data.

Organizing and preparing the data for analysis involved transcribing interviews and sorting/arranging the data into different types depending on the sources of information. Reading through the data means obtaining a general sense of the information and reflecting on its overall meaning.

The qualitative data in terms of responses of students in the interview was coded and summarized.

Ethical Considerations

In the extent that there were issues and concerns on ethicality of the research, the researchers see to it that the research was a prototype one. The researchers ensured that the identity of the respondents will be held confidential and no personal details will be mentioned in the findings of tge study. If the research required to have secondary data sets or to use other researchers' data collection tool, the researchers will secure written approval from the resources for them to use the materials.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

The following were the results of the study.

1. What is the level of academic stress of first year education students of CAPSU Pilar amidst the pandemic?

Table 2. Level of academic stress of first year education students of CAPSU Pilar

Profile	Mean	Standard Deviation	Interpretation
Teachers' Stress	3.29	0.50	Moderately Stressed
Results Stress	3.35	0.79	Moderately Stressed
Tests Stress	3.42	0.69	Highly Stressed
Studying in group Stress	3.57	0.58	Highly Stressed
Peer Stress	3.26	0.61	Moderately Stressed
Time Management Stress	3.66	0.73	Highly Stressed
Self-Inflicted Stress	3.33	0.64	Moderately Stressed
	3.41	0.65	Highly Stressed

The data in Table 2 showed that the first year student of Bachelor of Elementary Education were highly stressed with the mean of 3.41 and standard deviation of 0.65. The result is consistent with the study of Licayan et al. (2021). Further, the study provides evidence that academic stress is high, which means that the students experienced, in general, the factors caused by their teachers, fear of results and tests, studying in groups, peers, managing their time, and self-imposed stress. Adil and Ghayas (2019) explained that students deeply engaged in their studies may become more vulnerable to academic stress owing to their increased sensitivity towards their academic goals. However, academic stress is not a new phenomenon because many authors mentioned that the Covid-19 is a

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 6 of 10

source of stress. It has become a source of debate whether the shift from traditional learning into blended or flexible elevates stress or just the Covid-19, and its domino effect into mental health or economic difficulties among students will add academic stress.

2. What is the level of academic stress of first year education of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self inflicted stress?

Table 3. Level of academic stress of first year education of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self inflicted stress

Profile	Mean	Standard Deviation	Interpretation
Teachers' Stress	3.29	0.50	Moderately Stressed
Results Stress	3.35	0.79	Moderately Stressed
Tests Stress	3.42	0.69	Highly Stressed
Studying in group Stress	3.57	0.58	Highly Stressed
Peer Stress	3.26	0.61	Moderately Stressed
Time Management Stress	3.66	0.73	Highly Stressed
Self-Inflicted Stress	3.33	0.64	Moderately Stressed
	3.41	0.65	Highly Stressed

The data in Table 3 showed that the students were moderately stressed in teachers' stress, results stress, peer stress, and self- inflicted stress. The table also showed that the students were highly stressed in tems of tests stress, studying in groups stress, and time management stress. The result is in with the study of Barbayannis, G., Bandari, M., Zheng, X., Baquerizo, H., Pecor, K. W., & Ming, X. (2022) which states that academic stress may be the single most dominant stress factor that affects the mental well-being of college students. Some groups of students may experience more stress than others, and the coronavirus disease 19 (COVID-19) pandemic could further complicate the stress response. Furthermore, it can be implied that because of the COVID-19, the academic stress in studying in groups, tests stress, and time management stress became high because these activities need collaboration and group dynamics, however because of the virus one needs to isolate and group activities are discouraged.

3. Is there a significant difference on the level of academic stress of first year education students of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self inflicted stress when grouped according to respondents' age, sex, father's occupation, mother's occupation, father's education and mother's education?

Table 10. Significant difference on the level of academic stress of first year education students of CAPSU Pilar in terms of teachers' stress, result stress, tests stress, studying in groups stress, peer stress, time management stress, and self inflicted stress when grouped according to respondents' age, sex, father's occupation, mother's occupation, father's education and mother's education

Variables	Test	Statistic Value	p-value
Teachers' Stress			
Age	ANOVA	$F=0.903$	0.410
Sex	t-test	$t=0.834$	0.408
Father's Occupation	ANOVA	$F=0.575$	0.633
Mother's Occupation	ANOVA	$F=1.260$	0.296
Father's Education	ANOVA	$F=0.698$	0.652
Mother's Education	ANOVA	$F=0.627$	0.708
Results Stress			
Age	ANOVA	0.522	0.596
Sex	t-test	0.858	0.394
Father's Occupation	ANOVA	1.801	0.156

	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 7 of 10

Mother's Occupation	ANOVA	1.779	0.160
Father's Education	ANOVA	1.110	0.367
Mother's Education	ANOVA	1.005	0.431
Test Results			
Age	ANOVA	0.363	0.697
Sex	t-test	0.203	0.840
Father's Occupation	ANOVA	4.324	0.008*
Mother's Occupation	ANOVA	1.203	0.316
Father's Education	ANOVA	0.465	0.832
Mother's Education	ANOVA	0.294	0.937
Studying in Group Stress			
Age	ANOVA	0.750	0.476
Sex	t-test	0.283	0.778
Father's Occupation	ANOVA	2.090	0.110
Mother's Occupation	ANOVA	1.247	0.300
Father's Education	ANOVA	0.315	0.927
Mother's Education	ANOVA	1.119	0.362
Peer Stress			
Age	ANOVA	0.098	0.907
Sex	t-test	0.843	0.402
Father's Occupation	ANOVA	1.163	1.331
Mother's Occupation	ANOVA	0.285	0.836
Father's Education	ANOVA	0.543	0.773
Mother's Education	ANOVA	1.396	0.231
Time Stress			
Age	ANOVA	1.244	0.295
Sex	t-test	0.048	0.962
Father's Occupation	ANOVA	1.704	0.175
Mother's Occupation	ANOVA	1.067	0.370
Father's Education	ANOVA	0.495	0.809
Mother's Education	ANOVA	0.782	0.587
Self-inflicted			
Age	ANOVA	0.359	0.700
Sex	t-test	1.258	0.213
Father's Occupation	ANOVA	1.366	0.261
Mother's Occupation	ANOVA	1.521	0.218
Father's Education	ANOVA	0.496	0.809
Mother's Education	ANOVA	0.824	0.556

The data in Table 10 showed that there is a significant difference on test stress when respondents are grouped according to father's occupation, $F=4.324$, $p=0.008$. This might because of pressure

The rest, there is no significant on stress the respondents experience. Thus, teachers' stress, result stress, studying in groups stress, peer stress, time management stress, and self inflicted stress are comparable among respondents when they are grouped according to age, sex, father's occupation, mother's occupation, father's education, and mother's education.

4. What is the cause of the academic stress of the first year education students of CAPSU Pilar?

Based on the results of the in- depth interview, the following were the cause of the academic stress if the first year education students of CAPSU Pilar amidst the pandemic.

1. Internet Connectivity

Respondent 1

	Document Type:	Document Code	RES- CR-01
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 8 of 10

The greatest academic stress that I brought are that the internet on our baranggay is not stable we have many activities to answer. Also it is hard that it is a modular learning because some of the subject is not clearly to understand because of the no stable internet.

Respondent 2

Nahihirapan sa pag-aaral dahil sa mahinang internet connection sa aming lugar at kakakulangan ng pera para makapag load, pananakit ng aking mata dahil sa pagbabad sa pagtingin sa cellphone at higit sa lahat ang pagtulog sa di tamang oras na hindi nakakabuti sa aking kalusugan.

Respondent 3

The internet connectivity gave me academic stress this pandemic because our barangay has very weak signal for the internet.

Respondent 4

It is very hard for me to use the internet for my classes because of no signal in our place. Sometime I read the messages of my teachers in the gc very late because of no signal.

Respondent 5

I am very stressed with the internet connection especially that my school works are sent by my professors in the group chat but we have very poor internet connection and I cannot submit my work on time.

2. Cellular Load

Respondent 1

Sometimes I do not have money to buy load for my cellphone to open the messages of my teachers and answer the activities in the Google Classroom.

Respondent 5

I have no money to buy load for wifi to access the activities sent by my teachers and I am shy to ask my parents for load because they do not have money too.

Respondent 7

I need to save money so that I can buy load to load my cellphone or wifi because our money is only enough to buy our food for the family.

Respondent 9

I always worry about the load for internet because I do not have enough money to buy load every week which is 50 pesos.

3. Time Management

Respondent 1

Each subjects has many assigned tasks and I find it hard to do everything at once especially that there is no teacher who can explain to me how to answer the activities. Sometimes one subject has three activities and I find it hard to all those three activities on time.

Respondent 2

Because of COVID we have to stay at home and do our tasks via modular but I find it hard to find the time to work on my activities because there are many of them and I have also many household chores that I need to do.

Respondent 7

I have to work so that I can earn money and support my family and my education but because of my work I sometimes forget my activities because I have very small time do my activities. I have to work and I have also to work at home.

Respondent 10

I find it hard to find a time to do all of my activites because there are many activities, exams, and quizzes in every subject. I have 9 subjects and I need to do all of the activities but sometimes I cannot because of the lack of time and sometimes I am late in passing my activities.

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 9 of 10

means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

CONCLUSION

Based on the results of this study, it can be concluded that the level of academic stress of the first year education students amidst the COVID19 pandemic is highly stressed. Also, the level of academic stress of the first year education students amidst the COVID 19 pandemic is moderately stressed in terms of teachers' stress, moderately stressed in results stress, highly stressed in tests stress, highly stressed in studying in groups stress, moderately stressed in peer stress, highly stressed in time management stress, and moderately stressed in terms of self- inflicted stress. Furthermore, that there is a significant difference on test stress when respondents are grouped according to father's occupation. The rest of the data showed that there is no significant on stress the respondents experience. Thus, teachers' stress, result stress, studying in groups stress, peer stress, time management stress, and self inflicted stress are comparable among respondents when they are grouped according to age, sex, father's occupation, mother's occupation, father's education, and mother's education. Lastly, the cause of academic stress of the first year education students were internet connectivity, cellular load, and time management.

RECOMMENDATIONS

With the result of the study showing that the BEED first year students were highly stressed amidst the pandemic, it is recommended that the university should create an intervention program that would help ease out the stress of the students. It is also high time to intensify, not only the Guidance and Counselling Program of the institution, but as well as teacher facilitator training addressing the students' Mental Health. The study suggests that the institution review the existing guidelines and policies classes in times of Covid-19 Pandemic. The institution should review the volume of lessons and the questions provided in the analysis and application part.

They can also create trainings or workshops were the students were taught on how to handle the academic stress they are experiencing. It is also recommended to encourage the teachers to limit the number of activities given to the students for them to manage their time well in answering the activities and for them to give quality outputs. The university should also strengthen the internet connectivity of the campus by partnership with private companies who can offer strong internet connection, and lastly the university may also provide load assistance to students who belong to the low socio- economic status.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.) Journal

Publication- CAPSU Journal
Patent- Not Applicable
Product- Trainings/ Seminar- Workshops
People Services- Students, Faculty
Partnership- CAPSU, CHED
Policy- Basis for formulation of the enhancement of the BEED curriculum
Social Impact- the students will not be burdened with bulk of academic tasks; less academic stress
Economic Impact- stronger internet connectivity, provision of load assistance

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.

(17) Acknowledgments (Include only important persons and institutions with involvement in funding and conduct of the research. Justify paragraphs with main headings in caps.)

First and foremost, the researchers would like to thank the Almighty God for His guidance and provision in the completion of this study. The researchers would also like to thank to Jennifer P. Benlior, DPA, Satellite College Director, for her support during the onduct of this study. The researchers would also like to thank Philomel Innocent P. Obligar, MAT, Research Chair, for his
