(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

Youth plays a vital role in the community as a state by Dr. Jose Rizal that “the youth is the hope of our future”. Hence, the youth must be aware, empowered, and educated about their role in nation-building. Lack of awareness, empowerment, and education of the youth may lead to delinquency.

Moreover, the foundation of a nation begins with the education of the children since they are considered one of the most important assets of the nation. Every effort should be made to promote their welfare and enhance their opportunities for a useful and happy life. The molding of the child’s character starts at the home. Consequently, every member of the family should strive to make the home a wholesome and harmonious place as its atmosphere and conditions will greatly influence the child’s development (Villanueva, 2006)

Cruz (2007) mentioned that education affects the development of a child as well as that of a country in several ways. The most obvious is the relationship between education and employment. A lack of accessible and proper education contributes to the emergence of different crime-enhancing factors, such as school drop-out, a lack of opportunities for professional training, and gang members at school. These factors, in turn, increase the likelihood of juvenile offending and decrease future opportunities in the labor market.

Crime happens anywhere in this world and it excuses no one, whether rich or poor, adults to youths and juveniles. The general public sees criminals as gruesome adults. But an increasing number of youth getting involved in criminal activities alarms the society as a whole (“Juvenile Delinquency”, 2009). Common felonious activities like riots, theft, robbery, carjacking, murder, homicide, rape, and others are committed by young adults and even mature persons, but through these days the youth are involved in most of these crimes (“Juvenile Delinquency”, 2009). This issue is not as big as the economic crisis the society is experiencing right now; however, this has always been a perennial issue to the community and the country as a whole.

According to Villanueva (2006), juvenile delinquency refers to an anti-social act or a child/minor/youth’s behavior that deviates from the normal pattern of rules and regulations, custom, and culture which the society does not accept. The prevention of juvenile delinquency is an essential part of crime prevention in society. Guevara and Bautista (2008) quoted that, “An ounce of prevention is better than a pound of cure”, this manifests the importance of misbehavior deterrence among the youth.

Youth intervention programs and policies will only succeed when youth are empowered to become active partners and not mere spectators in the program formulation stage (Hope & Kempe, 2012). While several youth policies tend to have a very seductive theoretical conception of youth empowerment, yet, in reality, their involvement in the policy-making processes is very dormant. However, their involvement across the board can be a ground set to influence their long-term empowerment as active citizens (Okojie, 2003).

Therefore, the purpose of this study is to ascertain the prevalence of juvenile offenders in the Province of Capiz in order to link the findings to the implementation of comprehensive empowerment and delinquency prevention programs. This is the rationale behind the study's pursuit: to keep the nation from having to deal with the "Pag-asa ng Bayan" in the future when they are drawn into illegal activities. Additionally, the researcher hopes to draw the attention of the local government, whose duties include more than just maintaining order and supervision over the city—they also have an obligation to provide young people in legal trouble with assistance rather than punishment.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned. .)

This study will focus on determining the status of juveniles offenses and the contributing factors of juveniles offenses in the Province of Capiz. Moreover, the results of this study will serve as an input of Project JEPPs Juvenile Empowering & Prevention Program Strategies to prevent the occurrence of juvenile offenses.

This project is expected to maintain a good relationship with the youth by increasing their knowledge and awareness through empowerment and prevention programs strategy in the prevention of juvenile offenses in the community responding to the call of nation-building. It will change the perspective of the youth in engaging in delinquent acts. The youth and the community will benefit from this project wherein the mindset of the youth will focus on this program instead of delinquency and this program is expected to alleviate the level of delinquency in the community. Lastly, this project is expected for the partner community to adopt and collaborate for the full implementation of this project.

(10) Objectives/Statement of the Problem

Generally , this study will determine the status of juvenile offenses in the Province of Capiz.

Specifically , this will seek to answer the following;

1. To determine the status of juvenile offenses of from 2021-2023 in the Province of Capiz under the following
 - a. Property Offenses
 - b. Violence
 - c. Narcotics
 - d. Status Offense
2. To determine the contributing factors of juvenile offenses.
3. To formulate programs on juvenile empowerment and prevention strategies to prevent the occurrence juvenile offenses in the Province of Capiz.

(11) Review of Literature/Prior Art Search

In the previous studies of delinquency in the Philippines which are based upon official data gathered, indicates the typical delinquent to be 15- 16 years of age (Shoemaker, 1992). Comparative studies were conducted on male-female patterns of delinquency identification (Shoemaker, 1994). The data gathered indicates that the Philippine youth population aged 15-19 years old composed 11% of the total number of more than 68 million Filipinos (Raymundo & Xenos, 1999). A decade after this study was conducted, the Juvenile Justice and Welfare Council, a total of 1,297 of Child in Conflict with Law (CICL) were served by the City and Municipal Social Welfare and Development Offices (MSWDO) in 15 regions in the country in the first quarter of 2016.

Delinquency encompasses a range of norm-breaking behaviors for which adolescents are criminally responsible: drug use, violent offenses against other persons and carrying weapons are just some instances of delinquency (Marte, 2008). The negative psychosocial and economic consequences of delinquency along with its developing expansion have caused experts' concerns (Alboukordi, 2012). Many adolescents today, are at risk-stemming from their behavior. To organize preventive programs, recognizing factors and the crime and crime-liability of the juveniles is very important ((DiClemente et al., 2001). In developing country, like the Philippines, adolescents form remarkable portion of society; it demands to pay attention to the adolescents (Changizi, 2007). Children are the future of a nation, the builders and pillar for a great nation. If crimes are to continue to penetrate their youth and their young minds, the dream for a great nation will not prosper

Juvenile delinquency is a major problem in many societies as it causes major distress and damage to victims, perpetrators, and society at large (Nas et al., 2005). A delinquent youth refers to any male child who is in the age of 17 years or any female child who, while under the age of 18 years, violates any law of the state or is incorrigible or knowingly associates with thieves, vicious or immoral persons; or knowingly frequents a house of ill-repute; or knowingly frequents any policy shop or dram shop where intoxicating liquors are sold; or uses vile, obscene, vulgar, profane or indecent language in any public place or about any school house; or is guilty of indecent or lascivious conduct (Teitelbaum, 2002).

In comparison, delinquency has traditionally been viewed as a male phenomenon, often defined in androcentric terms, and neglecting females in studies regarding delinquent behavior. However, females are the fastest growing subpopulation of the correction population, which amplifies the importance of understanding the nature and etiology of their offending. Recent research has suggested that predictors of male juvenile delinquency do not

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01

			Effective Date	November 30, 2019
			Page	Page 4 of 7

adequately explain delinquency in females, because the androcentric research ignores the damaging impact of sexual childhood abuse and other prominent family factors on female juvenile delinquents. This study aimed to examine the impact of childhood parental sexual abuse on female juvenile delinquency from a social developmental perspective by testing a sub-model of the SDM using a longitudinal database of child abuse and neglect (Nagle, 2019).

Juvenile delinquency is a global phenomenon, and interest in comparative studies of juvenile offending and society's reaction to it has been steadily growing, despite the inherent difficulties of comparing juvenile justice processes across different regions. Both adolescence and the concept of juvenile delinquency are social constructs that vary by time and place. To know what constitutes a juvenile, or a delinquent act, requires detailed knowledge of a jurisdiction's social, political, cultural, and legal history. International data in the form of officially recorded contact of juveniles with formal institutions are scarce, and they are often limited in their use for direct comparisons, due to divergent definitions and recording practices, or coverage of geographical regions. The United Nations Surveys on Crime Trends and the Operations of Criminal Justice Systems (UN-CTS) have the widest geographical reach, but lack transparency of definitions or verification (Neissl and Singer, 2020).

Based on the result of data and documentary evidence gathered by Gahar (2020) the researcher arrived from the following conclusion: Data from WCPD Investigators shows that there are three (3) common roots for high rates of youth gangs and delinquency in Metro Manila, these are: Drug and alcohol addiction; Association with deviant peers for protection and company; and Having alcoholic and drug addict parents, City Social Workers established that youth join gangs and delinquency because of Antisocial behavior; Inadequate Moral Development; Inconsistent Parenting; Lack of Communication with Parents; School Adjustment Problems; Low IQ; and Low Self-Esteem, Data from DSWD-NCR revealed the profile of youth gang members in Metro Manila which includes male ranging from 14-17 years old; drop-out with elementary school level; from a family of 4-6 children; parents are low earning workers or unemployed; lack of education or low educational attainment; those that are maltreated, abused and neglected; committed the crime of theft or robbery; committed crimes with peers; used drugs or drunk alcohol and in handling youth gang and juvenile, the following stages in the Juvenile Justice Process are being observed and implemented: Law Enforcement Initial Contact; Assessment of Discernment; Intervention and Diversion Programs; Inquest Proceedings; Preliminary Investigation and Filing of Case; Detention of the Child Pending Trial; Court Proceedings; and Service of Sentence or Release on Probation and the protocols of juvenile justice process, treatment and rehabilitation of youthful offenders is in accordance with the provisions of R.A. No. 9344, as amended and the Family Courts Law.

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.

This study is anchored on the different delinquencies being committed by the youth (Gutierrez & Shoemaker, 2007). Juvenile delinquency refers to a wide range of acts from minor misbehaviour or status offenses such as skipping school and cheating on exams to violent personal offenses and other serious crimes.

A. Property offenses. These are further classified as overt, covert property, swindling, and vandalism. An overt property offense is committed through the use of overt, forceful methods, committed with a heightened sense of daring (lakas ng loob) and in public view or with the risk of being in public view. A covert property offense involves stealing in the absence, or without the knowledge, of the victim and in which the act is hidden from public view. Swindling is acquiring property by means of trickery, often through verbal machinations and false pretences. Vandalism involves the destruction of property but not acquisition and is an expression of aggressive behaviour.

B. Violence. Acts are considered to be violent when they involved physical or verbal aggression and preparation for or anticipation of physical confrontation. These acts are often committed with lakas ng loob. Violent offenses include robbery, hitting someone, involvement in a group fight, throwing objects at houses or people, carrying a hidden weapon, and shouting profanities at parents and teachers. The last offense, though not a physical act that typifies commonly known violent behaviour is qualified as violence because it is confrontational, is aggressive, seeks to damage emotionally, expresses open defiance, and provokes a physical encounter.

C. Drug, cigarette, and alcohol use. Consumption of cigarettes, alcohol, and drugs may normally be grouped under substance abuse. The more serious nature of drug abuse, compared to cigarette and alcohol use, is considered. The use of the latter two substances, in fact, is often regarded as a status offense. However, in this study, alcohol and cigarette use is a separate category from drug abuse and from status offenses.

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

In recent years, integrating qualitative and quantitative methods becomes common in research (Bryman, 2006) because mixed method design can provide detailed and comprehensive data in order to achieve the research objectives and answer the research questions. This study most appropriately employed the explanatory model, which contains first quantitative data collection followed by qualitative data collection. This method was used in order to obtain a clearer picture from the quantitative data, and then to use the qualitative data to provide better understanding and explanation of the study in question. Creswell and Clark (2007) stated that the explanatory design (also called sequential design) is a two-stage mixed method design. This design first begins with the collection and analysis of quantitative data and followed by the collection and analysis of qualitative data. In the explanatory design, the researcher recognizes particular quantitative findings that need further explanation.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart.

[illegible]

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

- Proposed juvenile empowerment & prevention program strategys to prevent the occurrence of juveniles offenses in the Province of Capiz.

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

- Conduct information drive, trainings and seminars.**

(16) Targets Beneficiaries (Who the clienteles are and what are the expected outcome/effects of the use of the projects output)

Target Beneficiaries:

- Youth
- Parents
- Local Government Unit
- Philippine National Police
- Department of Social Welfare and Development
- Barangay Officials
- SK Officials
- Institution
- Students
- Faculty

(17) Personnel Requirement
