(7) Sector/Commodity

(8) Discipline/Field of Specialization

Human Resource Management

(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

This study would like to determine the correlates of job performance of faculty members of CapSU Pontevedra.

Performance is one important area that needs to be taken into consideration when it comes to the internal marketing of a company. However, reaching a high-performance level has proven to be more of a challenge as companies become more competitive and as market standards continue to increase. This assumes not only on companies being able to provide quality services and products but on high performing workforce as well. The more employees exceed the expectations, the greater the company's competitive advantage will be (Vosloban, 2012a). This is more reason enough for the company's need to have continuous improvement.

Continuous Improvement is a management philosophy for continuously improving the quality of products or services and processes to achieve customer satisfaction (Singh & Singh, 2015). Continuous improvement can be applied to all industries including that of the service industry where the education sector belongs.

For the education sector, the key drivers are the faculty members who play a pivotal role in building up an educational institute as they provide knowledge and skills necessary to the students (Khan et al., 2021). The performance of faculty members affect how satisfied the clientele would be in the service delivery. This in turn becomes the image of the institution where the faculty member belong, thus creating a domino effect that better job performance would yield better organizational performance which could translate to profitability.

Because of this, there is a need to identify what factors are associated with job performance of faculty members to determine areas where improvements can be made. With the foregoing, it is worth knowing what factors associated to job performance that can be viewed not negatively but an area to which improvements can be made for improved organizational performance.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

This study would like to determine the correlates of job performance of faculty members of CapSU Pontevedra.

Specifically, this study would like to answer the following questions:

1. What profile can be drawn from the faculty members in terms of sex, age, highest educational attainment, civil status, college/department affiliation, and length of service?
2. What are the job demands of faculty members in terms of physical, cognitive, and affective demands of employees?
3. What are the job resources of faculty members in terms of competence, leadership, and organizational citizenship behavior?
4. What is the level of job performance of faculty members?
5. Are there significant relationships between:
 - a. faculty profile and job demand?

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01

- b. faculty profile and job resources?
- c. faculty profile and job performance?
- d. job demands and job resources?
- e. job demands and job performance?
- f. job resources and job performance?
- 6. What factors are correlated with job performance?

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of-the-art of current technology / information from which the project proposal will take-off).

Job performance is a widely researched topic with focus on the factors affecting them. These has been done to understand what affects job performance as it has been proven that a company's performance is affected by employee's performance (Vosluban, 2012b), enabling companies to apply strategies which would improve performance and retain performing employees. The factors can be summed up into job demands, job resources, and stressors (Pandey, 2019).

Job demands decrease job performance (Demerouti et al., 2001; Pandey, 2019) but a possibility of job demand enhancing performance when managed by job security is also seen (Lu et al., 2017, p. 28). Job demands can either be a physical demand (Uppal, 2014), cognitive demand (Demerouti et al., 2001; Demerouti & Bakker, 2011) or affective demand (Goodwin et al., 2011; Greenidge et al., 2014).

Job resources aid in the performance of employees and are important predictors of job performance (Kroon et al., 2015). Although a possibility of certain demands reducing job resources and then subsequently affect job performance is also a likelihood where certain variables may act as moderators (Pandey, 2019). Job resources can be classified into either individual resources, job resources, organizational resources or social resources.

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested).

The proposed conceptual model in this study is based on the JD-R (Job Demand-Resources) Model. The main assumption of the JDR Model is that every occupation has its own specific work characteristics associated with well-being which can be classified in two broad categories – the job demands and job resources – that may be applied to various occupational settings, irrespective of the particular demands and resources involved (Bakker & Demerouti, 2007a; Demerouti & Bakker, 2011a; Jackson & Rothmann, 2005).

It was 2006 that the model was developed by researchers Arnold Bakker and Evangelia Demerouti as an alternative to existing models of employee well-being which they believed only addresses a limited number of variables and for which do not apply to all people or sectors (Mind Tools Content Team, n.d.).

This theory will be applied in this study as the theory explains how working conditions influence employees which could be used to improve employee well-being and effective organizational functioning (Bakker & Demerouti, 2018).

Another theory that will be used in this study is the Job Demand-Resources-Stressors (JD-R-S) Model developed by Jatin Pandey in 2019 as an augmentation to the JD-R Model where, in addition to the existing job demands and resources, it identifies stressors that are conceptually different from demands as well as resources but impede job performance (Pandey, 2019). The JD-R-S model presents a linear and sequential relationship where demands, including stressors, are seen to impede performance whereas resources aid in job performance. This model will be used in this study to explain possible relationships between job demand and job resources, and job performance.

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

This study will utilize descriptive-cross-sectional survey-correlational research design to analyze the factors associated with job performance of permanent and contractual faculty members of CapSU Pontevedra. The target population in this study are permanent and contractual faculty members.

Research instrument composed of three (3) parts will be used to gather data. Part I deals with demographic information and work-related information of the participants. Part II contains 20 items statements that determine the job demands of participants in terms of physical demand, cognitive demand, and affective demand. The items are measured using the scale of 1-5, where 1 means Never/Hardly ever and 5 Always. Part III contains 22 items on job resources, particularly on competence, quality of leadership and organizational citizenship behavior for both the individual and the organization. Competence and quality of leadership are measured using the scale of 1-5, where 1 means Never/Hardly ever and 5 – Always while organizational citizenship behavior is measured on a scale of 1-5, where 1 means poor citizenship behavior and 5 excellent citizenship behavior.

The questionnaire to be distributed is an adopted questionnaire. Responses will be reviewed for completeness and consistency, and will be subjected to data coding and encoding using Statistical Package for Social Science (SPSS) version 20 program.

In the analysis of data, to describe the personal and work-related information of the respondents, descriptive statistics will be used. To test the hypotheses on the relationships between profile and job demand, and profile and job resources, Chi-square and Spearman's rank order correlation (Spearman Rho) for nonparametric tests, and Pearson-r for parametric test will be used. Also, to test the hypothesis on the relationship between profile and job performance, Chi-square and Spearman Rho (non-parametric) or Pearson-r (parametric) will be used. Spearman Rho (non-parametric) or Pearson-r (parametric) will also be used to test hypothesis on the relationship between job demands and job resources as well as on the relationships between job demands and job performance, and job resources and job performance. Multiple regression analysis will be used to determine the factors correlated with job performance.

Commented [1]: First test the assumptions for parametric tests, before using the non-parametric ones.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart.

Research Objectives	Nov	Dec	Jan	Feb	Mar	Apr
1. Presentation of Proposal to In-house Review						
2. Data Gathering						
3. Analysis of Data Gathered						

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
	Document Title:	RESEARCH PROPOSAL	Revision No.	00
			Effective Date	October 31, 2019
			Page	Page 5 of 7

4. Writing of Final Manuscript						
5. Submission and presentation of final result						

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

A Training and Development Plan may be developed as an output of this study.

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

The Training and Development Plan may be adopted by faculty members of other public schools and may be delivered as part of the extension activities of the College of Management. Specific trainings may also be given and may be delivered by the college as well.

(16) Targets Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output)

The output of this research would benefit the HR department in a way that the training and development plan would serve as a guide to get effective outcome of work. The programs that can be derived from the plan would help in enhancing employee performance, boost employee productivity, and may even improve company culture.

(17) Personnel Requirement

Name	Role (Program, Project, Study Leader)	Field of Specialization
Krizzaline D. Barua	Study Leader	Management
Personnel 1	Enumerator	
Personnel 2	Encoder	
Personnel 3	Statistician	Statistics

Percent time devoted to the Program/ Project/ Study

Program/Project Leader (in hours):
