Name of Program	BASTANTE (Bulig-Alalay sa Seguridad sang Tawo: Agri-Fisheries, Non-formal Training, kag Extension) Program
Name of Project	Native Pig Production II: Native Pork Processing-From Pork-to-Fork
Proponent	Prof. Emely J. Escala
Co-Proponents	Mr. Junarey B. Doletin Mr. Darel Dapulaza Mr. Jimboy Asoy Dr. Honey Lee E. Casa Prof. Leah B. Yakit
Implementing Agency	Agriculture Department College of Agriculture and Fisheries and College of Management Capiz State University-Pontevedra

1. Background

Native Pig Production Phase II: Native Pork Processing-*From Pork to Fork* is an offshoot of CapSU Pontevedra's ongoing project on Native Pigs Production Phase I: Pig Dispersal which started last November 2020, currently has a total of 23 sows across barangays in the municipality of Pontevedra, Capiz. While Phase I is ongoing, an increase in the population of native pigs is expected in the next months. This is very timely while the price of pork from synthetic breeds remains high. In this context, native pork production in subsistence farms is advantageous. Although native pig has higher FCR than synthetic breeds, they are tolerant to adverse climatic conditions, more resistant to common parasites, pests, and diseases and can be fed with vegetable scraps and other edible plant leaves, and crop by-products making its production system less expensive. The most highlight of the native pig is the unique texture and taste of its meat (PCAARRD, 2017). However, aside from the famous native lechon, which only serves during special occasions, there is a lack of technology to maximize the market value of native pork. This is where the second Phase of the project concentrates. Native Pork Processing-*From Pork-to-Fork* is focus on providing trainings on native pork processing and value adding including developing of niche to showcase native pork products of the partner farmers or the native pig raisers in Capiz. The output of this project includes but not limited to processed

native pork, native Lechon recipes, and packaging and marketing strategies.

This project will be conducted through institutional and inter-agencies support to training, product development, and marketing such as the CapSU Pontevedra, LGU Pontevedra, DTI, DOST, and other agencies.

2. RATIONALE

Native animals are considered an important component of most agricultural production systems in rural areas. They augment food supplies, provide high quality protein food and source of livelihood. One of these animals, which is common in the Philippines, is the native pig. A native pig is a product of indiscriminate crossbreeding between domesticated wild pigs and introduced breeds of pigs. After a long process of natural selection, it has evolved into a group that is able to survive and reproduce under natural environments even with minimal human interventions. Through a process of natural selection, the native pig has developed unique patterns of behavior that enhance its fitness to local conditions and resilience to extremes of climatic occurrences. Its meat has also developed a unique taste and texture that is preferred and paid a premium price by consumers. Native pig provides much importance in terms of additional income, high-quality protein food, and socio-cultural and economic services, particularly during cultural celebrations and ceremonies. Other important characteristics of the native pig are its adaptability to local environmental conditions; apparent resistance to diseases; and the unique texture and taste of its meat (PCAARRD, 2017).

With the concerted effort of government agencies including state universities like CapSU Pontevedra, an increasing number of native pig farmers form part of the backyard pig industry in the country. But despite their pronounced taste and texture, native pigs are only famous during special occasions like birthdays, weddings, and religious rituals and celebrations. Its value could be translated into income by capacitating them with skills in product development and value-adding while developing the niche for its products. As part of CapSU Pontevedra's commitment to its mandate, partner farmers will be given basic and advanced training on meat processing and preservation, product packaging, marketing, and business partner identification hence, this project.

3. Goals and Objectives

This project aims to capacitate native pigs farmer with the skills needed to engage in native meat processing business enterprise, particularly:

- a. Complete a series of skills training in meat processing and preservation;
- b. Develop native pork goods;

Republic of the Philippines

CAPIZ STATE UNIVERSITY

PONTEVEDRA CAMPUS

Bailan, Pontevedra, Capiz

website: www.capsu.edu.ph email address: pontevedra@capsu.edu.ph

- c. Participate in seminars and training on basic accounting and business plan preparations;
- d. Involvement in trade fairs and product pitching.

4. Project Description

As the lead agency, CapSU will provide a series of training to capacitate native pig farmers with the skills needed for them to engage in the native pork processing business. The primary recipient of this training will be the beneficiaries of the hog dispersal in Barangays Linampongan and Yatingan since they were raising native fatteners. This project will start in the first quarter of 2023 and will run continuously until 100% of the beneficiaries will be equipped with the skills in meat processing. This training will be a collaboration between the livestock farmers association, CapSU and LGU in Pontevedra

Below is the sample activities to be conducted in succession per barangay.

Order of Seminar/Training	Title	Beneficiaries	Responsible Person	Materials Needed	Expected Output	Location	Duration	Schedule
1 st	Characteristics of native pork and factors affecting its attributes	Native pig farmers	COAF	Powerpoint presentation Projector Native pork and hi-bred pork	Passed the post test evaluation	Brgy. Linampongan	1 day	2 nd Saturday of the month
2 nd	Introduction to meat processing and preservation and Meat Processing Demonstration	Native pig farmers	COAF-CM-DTI	Powerpoint presentation Projector	Passed the post test evaluation;	Brgy. Linampongan	2 days	3 rd Friday-Saturday

5. Project Implementation and M&E System-

The project will be implemented following an MOA participated by CapSU, LGU, and the Farmers Association. Consultative meetings and evaluation of products will be done within and between institutions to ensure quality delivery of the seminars and training including identification of potential problems and possible solutions.

For this training, CapSU will provide the native pig to be processed and used for demonstration. The product will be subjected to an organoleptic evaluation by the panelist identified by CapSU. Farmers with remarkable outputs will be selected to proceed to the next training for further improvement of the product until identified as marketable. The remaining farmers will be assisted until their product will become marketable as well.

Success indicators will be the number of farmers with products ready for marketing as identified by CapSU and its partner agencies.

Since this is a successive training, monitoring and evaluation will be done regularly bi-monthly or as the need arises.

Expected Outputs

- a.** Skills training in meat processing and preservation ---70% of the native pig farmers complete the series of training
- b.** Develop native pork goods--Atleast 2 native pork products applied with IP and pitch
- c.** Participate in seminars and training on basic accounting and business plan preparations--70% of the native pig farmers complete the basic accounting training; 20% of the participants have the concrete business plan
- d.** Involvement in trade fairs and product pitching--Attended at least 2 trade fairs and at least 1 product pitch during the duration of the project

6. Sustainability Plan

CapSU will be facilitating the preparation of business proposals for those farmers who can make remarkable native pork products. These proposals will be submitted to external funding agencies and CapSU will help to polish the proposal until it meets the agency's requirement and funds will be given to start up their business. Since, nowadays, having an association is an advantage for funding, CapSU will be facilitating their application to become an association of native meat processors.

7. Resource Requirements

Order of Seminar/ Training	Title	Materials Needed	Estimated cost
1 st	Characteristics of native pork and factors affecting its attributes	Powerpoint presentation Projector Native pork and hi-bred pork	Php 10,000
2 nd	Introduction to meat processing and preservation and Meat Processing Demonstration	Powerpoint presentation Projector Native pork and hi-bred pork, ingredient, processing tools and equipment	*counterpart DOST/DTI Php 35,000
3 rd	Native pork packaging and labeling	To be identified	*counterpart DOST: Php 15,000
4 th	Attendance to trade fairs	Record notebooks, cameras, registration fee	Php 5,000
5 th	Product improvement/Sensory evaluation	Native pork and hi-bred pork, ingredient, processing tools and equipment	*counterpart DOST/DTI Php 10,000
		Total Cost	75,000 for a complete set of training

			and seminars per barangay
		2 Selected Barangays	$=75,000 \times 2$ $=150,000$ in 2 years (budget requirement)

VII. BUDGETARY REQUIREMENTS
