(1) Extension Program/Project/Study Title:	
<i>HIRAGYAN: Development of Ati Indegenous Community</i>	
Proponent Name:	Peter John D. Fantinalgo, MSAr
Academic Rank:	Asst. Prof. IV
Co-Authors (with academic rank):	Marvin D. Bartolo Merry Dawn O. Cuagon Joan Marie F. Cullo Jireh P. Fabella Caren Joy Santillan
Campus/Satellite College/Address:	Roxas City, Main Campus
Telephone/Cell Phone/Fax Number:	09088857155
E-mail Address:	pdfantinalgo@capsu.edu.ph

(2) Category (please check) ☐ Education and Skill Empowerment ☒ Healthcare and Environmental Stewardship ☐ Innovation in Sustainable Agri-fishery and Livelihood ☒ Video Presentation ☐ Poster	SDG Alignment ☐ No to poverty ☐ Zero hunger ☐ Good health and well-being ☐ Quality Education ☒ Gender Equality ☐ Clean water and sanitation ☐ Affordable and Clean Energy ☐ Decent work and economic growth ☒ Industry, Innovation and Infrastructure ☒ Reduced inequality ☒ Sustainable cities and communities ☐ Responsible consumption and production ☐ Climate action ☐ Life below water ☐ Life on land ☐ Peace, justice, and strong institutions ☐ Partnerships for the goals
---	---

(4) Site of implementation	
Municipality/City:	Dumarao
Province:	Capiz
Region:	6

(5) Mode of Implementation ☐ Single Authorship/Proponent ☐ Collaborative Extension (within campus) ☐ Collaborative Extension (intercampus) ☒ Collaborative extension (external agency)
--

(6) Sector/Commodity Secondary Sector (Design, Building and Infrastructure)	(7) Discipline/Field of Specialization Architecture (Green Design, Sustainable Architecture and Landscape Architecture)
---	---

	Document Type:	Document Code	
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED EXTENSION	Page	Page 2 of 14

(8) Rationale (include the situation before intervention)

Capiz is home to indigenous people and communities. Away from the city life, there exists indigenous community called Ati Tribe, living in mountainous regions of Dumarao, Capiz, Philippines, specifically in Mt. Tag-ao, Brgy. Tamulalod. The Ati Community are inheritors and practitioners of philosophy, values, traditions, rituals, language, games, foods, architecture, literature, music dance, and embroidery that express a unique way of life of respect and love to interconnections of the Divine, fellowman and environment (Capiz Tourism, 2018). According to National Research Center of the Philippines (2020), Ati is a Hiligaynon term for indigenous people of the Panay Island belonging to the Negritos whose communities are distributed across the provinces of Capiz, Aklan, Antique, and Iloilo.

Today, the Ati Indigenous community of Mt. Tag-ao in Dumarao has already ventured into modern living. However, they still suffer from poor space planning, lack of clean water, and poor cultural preservation. According to International Labor Organization (2022), despite the rich culture and abundance of natural resources around them, the indigenous peoples in the Philippines, are ranked among the most disadvantaged sectors. They suffer disproportionately in areas like shelter, health, education, safety, and livelihood resources. Therefore, these circumstances threatened the use of traditional knowledge that preserves heritage, history, arts, and crafts of the Ati indigenous community, therefore there is a need to develop the Ati Indigenous community in order to protect and uphold their cultural heritage and traditional knowledge.

(9) Project Description, Implementation date/duration, and Objectives

This project is a Physical Development Plan of the Ati Indigenous Community. This Development Plan was started on August 2022 and finished on June 2023. It was made through the collaboration of Capiz State University main campus BS Architecture Department with the collaboration of Municipality of Dumarao, Capiz Tourism Department.

Developing the Ati Indigenous Community has a number of advantages in terms of job prospects, well-being, and enhancement in indigenous people's sense of identity in their culture and heritage. Therefore, this study aims to design the development of the Ati Indigenous Community by integrating sustainable design through rainwater harvesting system, passive cooling, natural lighting, and vernacular architecture, for them to demonstrate their heritage, history, arts, and crafts, while considering important aspects in developing shelter, health, education, safety, and livelihood resources. The community will be developed into home that they can proudly call as their own Hiragyan or home of hope, where they can share their vibrant and diverse culture.

This study aimed to design community spaces for the Ati Indigenous Community in Mt. Tag-ao, Brgy. Tamulalod, Dumarao, Capiz.

Specifically, this study aimed to:

1. Determine the needs of the Ati Indigenous Community to develop community spaces with respect to their culture and beliefs;
2. Investigate the existing condition of the site inhabited by the Ati Indigenous Community based on: Location, Existing Structures, Vegetation, Environmental Hazards and Accessibility;
3. Design a community space for the Ati Indigenous Community by integrating sustainable architecture through vernacular design, rainwater harvesting system, passive cooling, and passive daylighting.

(10) Strategies employed (this may include activities to attain the objectives)

This study employed a qualitative research design in order to design and develop the Ati Indigenous Community located in Mt. Tag-ao, Dumarao, Capiz, Philippines. According to Tenny, et al., (2021), qualitative research is a type of research that explores and provides deeper insights into real-world problems that aims to gather experiences, perceptions, and behaviour of the participants.

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	
	Document Title:	COMPLETED EXTENSION	Revision No.	00
			Effective Date	
			Page	Page 3 of 14

Furthermore, Thematic Analysis was the qualitative method utilized to analysed the data in this study. According to Braun V. (2014), thematic Analysis is a flexible data analysis plan that qualitative researchers use to generate themes from interview data. In addition, observation, focus group discussion, simulation method, archival documents, and electronic references were used to gather qualitative data that are necessary for the development of the Ati Indigenous Community.

Simulation method used to create architectural solutions for the research, included floor plans, elevations, and digital models. It is a procedure of imitative presentation in which a visualization of the structures was created to assess how it would operate in real-world circumstances. The researchers have employ computer-aided technology to create a complete floor plan, elevations, sections, a digital 3D model, and a tour film (walkthrough) that will provide a sample of user experience on the intended building's model.

Research instruments used in this study included the interview guide and observation guide. Computer 3D and 2D software were utilized to make plans and simulations for the required translations. The 2D illustrations made using 'AutoCAD' that create scaled drawings to draw the exact dimensions and identify the adjacency of different spaces within the given measurements of the lot. Sketch-Up is a tool that is used to create 2D and 3D design models that allow us to visualize plans in a 3-dimensional view. Enscape has used to render and create a simulation to incorporate entourage, textures, materials, lighting, and sunlight into the building to analyze its effects and how it can be seen in the actual environment considering the site characteristics and its orientations. The final software as a post-production tool is 'Photoshop' to enhance the image quality and add additional elements to the rendered pictures.

(11) **Results** (extent of the accomplishment of the objectives) include unintended outcomes whenever available

Results of the Focus Group Discussion

From the result of the data collected, it was determined that (1) the existing problems affecting the daily activities of the Ati residents are the lack of cultural and non-cultural facilities and community security; (2) cultural promotion, cultural preservation, and social impact in tourism are the opportunities for the Ati Community; (3) the community needed additional and developed cultural and non-cultural facilities in collaboration with the community; (4) The Ati Community prefers the traditional materials and designs to be used in the construction of the traditional indigenous Ati houses and other structures are indigenous building materials, traditional construction techniques, and traditional Ati house spaces; (5) the Ati indigenous people agreed to integrate modern technology to their contemporary houses while practicing a cultural heritage and tourism development; and (6) the Ati people seek protection and improvement of community security.

Results of the Site Observation

The site investigation revealed that the site is located in Mt. Tag-ao, Brgy. Tamulalod, Dumarao Capiz, bounded in the North by the Municipality of Cuartero, Capiz; on the East by the Municipality of Lemer, Iloilo; on the South by the Municipalities of San Rafael and the City of Passi, Iloilo; on the East by the Municipality of Dumalag, Capiz. The area claimed is bounded on the North by Barangay Malonoy, on the South by Brgy. Agsirab, on the East by Barangay Lawaan, and on the West by Barangay Jangsulob.

The existing structures in the site are classified as residential, mixed-use (residential-commercial), and institutional buildings. Furthermore, most of them were built with contemporary design using both concrete and light materials. Specifically, the existing structures in the site are Ati Houses, Comfort Rooms, Sari-sari Stores, Multi-purpose hall, Chapel, Old Day Care Center, and Carabao/Cow Shed.

The site consists mostly of sugarcane and peanut as it is their primary source of income. Other vegetation present on site are peanut, pigeon pea (kadyos), river tamarind (ipil-ipil), madre de cacao,

Existing Structure (Ati House)

Existing Structure (Comfort Room)

Existing Structure (Multi-Purpose Hall)

Existing Structure (Chapel)

Existing Structure (Cay Care Center)

Existing Structure (Carabao/Cow Shed)

The site consists mostly of sugarcane and peanut as it is their primary source of income. Other vegetation present on site are peanut, pigeon pea (kadyos), river tamarind (ipil-ipil), madre de cacao, guava tree, eggplant, pomelo tree, cogon grass, bamboo, banana tree, coconut tree, gmelina tree, and mango tree.

The site is approximately 6 kilometers away from the town proper. From town, it takes around 10 - 15 minutes by vehicle, and approximately 1 to 2 hours of walk to reach the Ati community. The Ati community is accessible through a concrete access road that can accommodate 4-wheeled vehicles.

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	
	Document Title:	COMPLETED EXTENSION	Revision No.	00
			Effective Date	
			Page	Page 6 of 14

The pathway from the access road to their neighbourhood and farm is unpaved, thus accessibility is difficult during rainy season.

Concrete Access Road

Unpaved Access Road going to Ati Community

SWOT Analysis

Soil Type. The site has small portions that are prone to soil degradation and erosion. Some slopes with lesser trees are slowly eroding, during heavy rainfall.

Water Bodies. The Badbaran River cutting through Mt. Tag-ao and Mt. Agsubay does not cause flooding and hazardous effect in the Ati Indigenous Community.

Climate and Weather Pattern. Season varies from wet to dry, and occasional typhoons and tropical depressions are passing through the site that brought damages to the area.

SOLAR ENERGY

Solar energy is the sunlight converted into electrical energy through solar technologies such as photovoltaic (PV) panels.

RAINWATER HARVESTING

Rainwater harvesting is a sustainable way to capture, divert, and store rainwater from rooftops for later use.

Sustainable Architecture Design Approaches (Solar Energy and Rainwater Harvesting)

VERNACULAR DESIGN

Vernacular design is based on local needs, availability of construction materials and reflection of the Ati Community traditions. This design approach is relatively energy efficient and sustainable, providing a vital connection between the Ati people and the environment.

PASSIVE DESIGN TECHNIQUES

Passive cooling and daylighting is especially useful in hot and humid or hot and dry climates like what is present in the Ati Indigenous Community, which requires some form of cooling at some time of the year to be comfortable.

Sustainable Architecture Design Approaches (Vernacular Design and Passive Design Techniques)

(12) Lessons Learned/Insights Gained

The study reveals that in planning and designing significant facilities within the Ati Indigenous community, it is significant to determine their needs with respect to their culture and beliefs.

The site investigation shows that the site conditions based on location, existing structures, vegetation, environmental hazards, and accessibility, which indicates the challenges and opportunities in developing the Ati Indigenous Community.

It was found that the Ati Indigenous Community needs and desire the integration of vernacular architecture and sustainable architecture through rainwater harvesting system, passive cooling, and natural lighting.

The radial organization was found to be applicable in efficiently arranging the spaces within the community, which allowed the researchers develop the Ati Indigenous

Community through creating clear focal space that expand in all direction where social interaction can take place with visual harmony and balance.

(13) Recommendation/s

To the Ati Indigenous Tribe. The residents should continue to practice their culture, beliefs, and rituals continuously in order to preserve and propagate them in the future as a means of preserving and promoting them as the development continues.

To the Local Government Unit (LGU). The LGU should continuously support, promote, and provide the necessary resources and facilities that will contribute to the development and enhancement of the Ati indigenous community and the advancement of its culture to the maximum extent possible

To Barangay Tamulalod. To ensure safety and security, the residents of Brgy. Tamulalod should keep the community safe from disturbance and property encroachment. The residents must be open to new development, gradually adapting while retaining their cultural identity.

To Future Researchers. This study is highly recommended to future researchers. This can be used as a reference or as a guide for those seeking to conduct the same study on the Ati Indigenous community. Those who have related studies may add pertinent information that will enhance the study of the Development of the Ati Indigenous community.

(14) Acknowledgments (Include only important persons and institutions involved in funding and conducting the extension activities. Justify paragraphs with main headings in caps.)

The heartfelt gratitude of the researchers goes to the Ati Indigenous Community of Mt. Tag-ao, Dumarao, Capiz, for opening their warm houses for the researchers and serving as significant participants for the Focus Group Discussion. The Ati Indigenous People also allowed the researchers to stay in the community and conduct a site observation.

Sincere gratitude also goes to the Local Government Unit of Dumarao, for the approval and assistance they have given to the researchers in gathering data for their study.

Special thanks to National Commission on Indigenous People (NCIP), especially to Mrs. Rubie Capada, who took time and effort to assist the researchers in requesting to gather data from the NCIP Regional Office in Iloilo. And researchers would also like to thank NCIP Regional Office for allowing them to gather confidential data from their respectful office.

Most of all, the researchers offer their deepest gratitude and praise to God Almighty, for giving them wisdom and knowledge all throughout their journey. His unconditional love is always present whenever and wherever the researchers are. The researchers are not afraid to face challenges and have the determination to pursue and accomplish this study, for they believe God declares in Jeremiah 29:11, He has plans for them, plans to prosper them and not to harm them, plans to give them hope and a future. With God, the researchers have victory
