(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

Just like its flavor, Philippine coffee has a rich history. The first coffee tree was introduced in Lipa, Batangas in 1740 by a Spanish Franciscan monk. From there, coffee growing spread to other parts of Batangas, allowing the province to grow in wealth over the decades. Lipa eventually became the coffee capital of the Philippines. In the 1860s, Batangas was already selling coffee to America, through San Francisco, and subsequently, with the opening of the Suez Canal, the Europe market opened. By 1880, the Philippines had become the fourth largest exporter of coffee beans, and when the coffee rust hit Brazil, Africa, and Java, it became the only source of coffee beans worldwide. Unfortunately, by the end of the decade, the coffee rust eventually reached the Philippine shores, destroying all the coffee trees in Batangas. The Philippine coffee industry experienced ups and downs thereafter and never recovered its glory days (Philippine Coffee Board Inc., www.philcoffeeboard.com).

While Philippine coffee production remains relatively low and is unable to even meet local consumption demand (coffee production was at 62,062 metric tons of green coffee beans in 2019 but Filipinos consume 100,000 metric tons of coffee a year and drink almost as much coffee as the people of the United States, Brazil, Japan and the European Union), the Philippines is looking to be one of the leading producers of top-grade coffee around the world.

In the Province of Capiz, a total of 1,200 robusta coffee seedlings were planted in the 1.5-hectare demo farm of TESDA that will serve as the learning site for robusta coffee production in the province. Training on proper production management technology, competitive advantage of robusta variety and groundworks for massive coffee planting in Capiz beginning 2021 were prioritized including the expansion of techno-demo site in Tapaz town. It is envisioned that a successful robusta coffee project that will have geared towards helping the local coffee farmers through providing additional coffee seedlings for the project (PIA-6/PN, 2020).

This present study on profiling of the coffee production in Capiz aims to collect data and information on coffee production that is cost-competitive, aligned with global quality standards, reliable and environment-friendly, which will provide sustainable benefits to farmers, processors, traders, and exporters, and the Philippine food security and poverty alleviation.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

The study generally aims to determine the profile of coffee production in the province of Capiz. Specifically, the study aims to attain the following objectives:

1. What is the current status of the coffee production in terms of type of coffee planters/growers (local processors, and micro small and medium enterprises and distributors), type of geographical locations, engagement in product consumption and/or commercialization?
2. What are the issues, challenges, and concerns of coffee farmers/growers?
3. What is the extent of involvement of the coffee growers/farmers in production planning, implementation, and extension activities of the LGU?
4. What is the extent of the production capacity, product quality, and market competitiveness of the coffee farmer/growers?

(11) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.)

(12) Review of Literature (Related researchers/activities that have been conducted. State-of –the-art of current technology / information from which the project proposal will take-off).

In the 1860s, Batangas was already selling coffee to America, through San Francisco, and subsequently, with the opening of the Suez Canal, the Europe market opened. By 1880, the Philippines had become the fourth largest exporter of coffee beans, and when the coffee rust hit Brazil, Africa, and Java, it became the only source of coffee beans worldwide. Unfortunately, by the end of the decade, the coffee rust eventually reached the Philippine shores, destroying all the coffee trees in Batangas. The Philippine coffee industry experienced ups and downs thereafter and never recovered its glory days (Philippine Coffee Board Inc., www.philcoffeeboard.com).

However, all is not lost for the Philippine coffee industry. Coffee is grown in 50 countries along the equatorial zone called, “The Bean Belt”. Interestingly, the Philippines lies within the Bean Belt. Blessed with favorable climate and soil conditions, from the lowland to the mountain regions, the Philippines is also one of the few countries that produces the four varieties of commercially-viable coffee - Liberica, Excelsa, Robusta and Arabica. In 1980, the Philippines became a member of the

International Coffee Organization, a group of importing and exporting coffee nations. According to the Agricultural Cooperative Development International and Volunteers in Overseas Cooperative Assistance (ACDI-VOCA), an American nongovernment organization providing technical support to the Philippine coffee farmers, there are positive trends for the Philippine coffee industry – coffee consumption is on the uptick and there are now more skilled farmers. The ACDI/VOCA notes that Philippine coffee has already penetrated the markets in Canada, Japan, and New Zealand and that the domestic market continues to be strong, particularly for specialized coffee- the Arabica coffee with a cup score of at least 80 points (American NGO says PH coffee industry in ‘good trend’", by Lilian Mellejor, published on 6 February 2019, Philippines News Agency. Accessed on 29 August 2020).

There are several local small and medium coffee processors of roasted beans and ground coffee in the Philippines. Nestle Philippines, Inc., located in Cagayan de Oro, is the largest local processor of soluble coffee, which accounts for 80% of the instant coffee market. It is followed by Universal Robina Corporation and Commonwealth Foods Corp (Department of Agriculture and Department of Trade and Industry, 2017-2022 Philippine Coffee Industry Roadmap).

The Philippine Coffee Manufacturer’s Brand/S Manufacturers are: Cafe Puro Commonwealth Foods, Inc. Great Taste, Blend 45 Universal Robina Corp. Jimm's Goldshine Pharmaceuticals, Inc. Kaffe de Oro Century Pacific Group (Snow Mountain Dairy Corp) Koffie Regent Foods Corp. Nescafe Nestle Philippines, Inc. Aside from the aforementioned Philippine manufacturers’ brands, there are also locally-made ground coffee brands available in the market, such as Aguinaldo Blend, Altura Coffee, Café Amadeo, Café de Lipa, Café Chico, Coffee Alamid (civet coffee), Davao coffee (variants Robusta, Arabica and Excelsa), Gourmet Café, Kalinga blend, Kalinga Robusta premium coffee, Kalinga brew, Kalinga Musang coffee, Kape Isa, Magallaya brew premium coffee (Excelsa), Monk's Blend, Mt. Apo Civet Coffee, Inc., Musang coffee roasted bean, Negros Rainforest, Rocky Mountain (variants of Mountain Blend and Classic Blend), and Sagada coffee. These products are manufactured by entrepreneurs, mostly operating on a small scale, and are primarily named after the place where they are produced.⁵ With the rise of the third coffee wave and growing focus on the origin, whether ethically-sourced and directly traded, and quality of the coffee beans, more new local coffee players are emerging, such as Primal Brew, Kalsada Coffee, Figures of Beans, Kape Maria, SGD Coffee, Gourmet Farms, Basilio Coffee, Cafe-Te-Ria, BrewsCo, Daybreak Coffee, Dipbrew Coffee Co., Great Basket Third Wave Coffee, Sinag Coffee Roastery, Everyday Coffee Roasters, Original Grounds Coffee Co., Fresh Batch, Commune PH, Comfy Beans, Henry & Sons, Stout Coffee PH, Mr. Beans Coffee,

Beanhi, Coffee for Peace and Coffeellera, among others (Filipino Coffee brands I've been loving (Part 1), The Tummy Train. Posted on 27 April 2019, www.thetummytrain.com).

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

1. Identification and Stratification of Coffee Production in the Province of Capiz

A letter from the Office of the University President, Vice President of Research Development and Extension and Director of Research requesting to visit the Department of Agriculture Office of the Province of Capiz will be secured to gather substantial information about the Coffee in the whole province. All data and information to be obtained from the office will be purposely utilized only for research grounds. After successful gathering of relative and relevant information needed from the office, the selected areas for conducting the research will be stratified from the identified municipalities with the greatest number of existing coffee planter/growers/farmers and farms down to its respective barangays.

2. Sampling Technique and Procedure

The descriptive method of research will be used because; it describes and interprets what is. It concerns with conditions of relationships that exist; practices that prevail; beliefs, processes that are going on; effects that are being felt, or trends that are developing (Calderon and Gonzales, 1993).

All coffee planters/growers/farmers, farms, local processors, micro small and medium enterprises and distributors in the province of Capiz will be the target respondents of the study to obtain reliable and viable research data on profiling of Coffee industry in the territory.

3. Data to be Gathered

Study 1: Socio-Demographic Profile of Coffee Growers in the Province of Capiz

Study 2. Stories in a Cup: The Native Coffee Farmers in Capiz Chronicle

Study 3. Tabang sa KAPEgaduhon: The Coffee Growers Success Stories

4. Data Gathering Procedure, Area of Study and Duration

The main instrument in gathering data will be the questionnaires. The instruments will be distributed to the respondents to answer the questions followed by unstructured interview using guide questions. Retrieval of questionnaire will be done immediately to minimize the loss of data. the questionnaire from the respondents the data to be gathered are the personal and work-related characteristics. The study will be conducted at the identified with the most number of existing planters, growers, farmers, local processors, micro small and medium enterprises and distributors in the province estimated to be conducted within three months.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart. Below is an example. This can be modified base on your desired Work plan.)

Research Objectives	Year 1						Year 2			
	Oct	Nov	Dec	Jan	Feb	Mar	Apr	June	July	Aug
1. Preparation and presentation of research proposal										
2. Data collection of existing of coffee production in Capiz										
3. Preparation of checklist/questionnaires for intended data to be gathered										
4. Hiring of data entry staff/enumerators										
5. Distribution, gathering of data and collection of checklist/survey questionnaires on identified areas										
6. Recording, analysis and interpretation of the data gathered										

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

- Cacao Processed Products

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(16) Targets Beneficiaries (Who the clienteles are and what are the expected outcome/effects of the use of the projects output)

- Future researchers
- Extension providers
