(1) Research Program/Project/Study Title:

TRADITIONAL FARMING KNOWLEDGE, BELIEFS, AND PRACTICES OF THE LOCAL FARMERS IN CAPIZ

Proponent Name:	Ronilo G. Berondo
Academic Rank:	Instructor I
Co-Authors (with academic rank):	
Campus/Satellite College/Address:	Tapaz Satellite College
Telephone/Cell Phone/Fax Number:	09979788107
	rberondo94@gmail.com

Program or Project has component (if no proceed to 2)? ☐ Yes ☐ No

Component Title:	
Component Leader/s:	N/A
Academic Rank:	N/A

(2) Category (please check)

- ☒ Social Science/Education /Humanities & other related fields
☐ Natural/Biological Sciences
☐ Food Research
☐ Developmental/ Computer/Engineering/ Architecture
☐ Extension

(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

Traditional knowledge can be broadly defined as the knowledge that an local community accumulates over generations of living in a particular environment (Ryser 2011). Traditional farming knowledge systems largely encompass local technologies, innovations, know-how, skills, practices and beliefs uniting local people to conserve resources and their cultural values. These have developed over thousands of years of direct human contact with the environment (Armstrong et al. 2006). Traditional knowledge often refers to a more generalized expression of knowledge associating a people or peoples with ‘time-honored’ ideas and practices associated with an individual or family (Ryser 2011). This knowledge is not limited to know-how, skills, innovations, practices, processes, learning and teaching, but also includes knowledge that is associated with biodiversity, traditional lifestyles and natural resources (WIPO 2012).

Local farmers have many beliefs, interesting because of their simplicity, connected with the planting of rice and crops. Bungad is a ritual or “panibu-tibo” perform by the local rice farmers through planting bunlaw, turmeric and lemongrass in the corner of the rice field facing east where the sun rises every morning. In planting rice and crops, farmers use Almanac to see the head and tail movement of the Bakunawa. They assure that their stomach is full or most often carry the healthy child at their neck and back, the sea is in high tide, and the moon is in progress to full moon. Another is burning sliced dried coconut meat while walking around the ripe grains for three consecutive mornings to drive away evil spirits. After harvesting, farmers perform tagurabong or thanksgiving by offering a portion of their best yield to someone they believe mystic. Local farmers utilize lagpit (mouse traps), human puppet, and clapping bamboo and banderitas to get rid of rat, mole cricket, rice bugs, and birds respectively. Traditional farming knowledge, beliefs, and practices of the local farmers were based from their forefathers and from their personal observations and experiences.

At this point in time there few literature documenting farmers’ traditional farming knowledge, beliefs and practices at Tapaz, Capiz Philippines. It is the hope of the researchers to preserve the unique tradition of the local farmers to portray the practices for the benefit of the local farmers and the succeeding generations.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- PROP-01

	Document Title:	RESEARCH PROPOSAL	Effective Date	November 25, 2019
			Page	Page 4 of 8

The study generally aims to determine the traditional farming knowledge, beliefs, and practices of the local farmers in Tapaz, Capiz Philippines. Specifically, the study aims to attain the following objectives:

1. What are the traditional farming knowledge, beliefs, and practices of the local farmers?
2. How the local farmers preserve and conserve the farming beliefs, and practices as part of the traditional knowledge system?

(11) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.

(12) Review of Literature (Related researchers/activities that have been conducted. State-of –the-art of current technology / information from which the project proposal will take-off).

In the Philippines, about 14–17 million of the total population are indigenous peoples belonging to 110 ethno-linguistic groups mainly concentrated in Northern Luzon (33%) and Mindanao (61%), with few groups in the Visayas area (UNDP, 2010). Molintas (2004) underlined that many of these indigenous peoples can be found in remote forested and hilly uplands. Some have also stood their ground successfully and maintained a close link with their ancestral past.

Many indigenous peoples in the Philippines such as the Ifugaos in Cordillera Mountains continued to thrive in their relatively remote and yet self-sufficient communities. They were able to uphold their traditions as reflected in their music, dances, rituals, folklore, wood carving, agriculture and forestry practices. For instance, they believe that many endemic trees such as *Ficus* spp. are associated with spirits (anito), so they conserved them (Lim et al. 2012). The indigenous peoples also observe customary laws that lay the foundation for justice, unity and peace within their tribes.

However, the advent of colonial rules from the early 1700s to the late 1940s has led to the unabated influx of migrants into ancestral domains (Molintas 2004). This contributed to gradual changes in many local practices and beliefs. For instance, are the ingress of Christian missionaries introducing new faith, agricultural technologies to address food security, logging, construction of roads and other infrastructures for better mobility, and formal educational systems.

The different indigenous knowledge systems for natural resource management such as *muyong* and *ala-a*-systems¹ as practiced by the indigenous communities in the Cordillera, Philippines (i.e. Ifugaos, Isneg, Tingguians and Ikalahans) have been described in some studies (Dolinen 1995; Camacho et al. 2012). Notwithstanding the transformations of many indigenous knowledge systems in the Philippines, there remain intact traditional forestry practices that help promote sustainable

			Page	Page 5 of 8

forest management. However, there are limited studies on the relevance of these indigenous knowledge and practices in the sustainable management of the indigenous forests. This study was therefore conducted in order to identify and describe these indigenous knowledge and practices as in the case of the Ifugao communities. In particular, it described key indigenous practices in woodlot or watersheds or collectively known as muyong for the sustainable management of the Ifugao forests.

(11) Materials and Methods or Methodology (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

Research Design

The study will use the qualitative research design. Qualitative research stress the socially constructed nature of reality (Denzin & Lincoln, 2011). This design is naturalistic, emergent, and purpose fit focuses on real-world situations as they unfold naturally. There is acceptance of adapting inquiry as understanding deepens. Cases for study such as individuals or communities are selected because they are information rich and illuminative (Berg, 2012).

Participants

Purposive sampling was used to identify the five (5) informants through the three-generation test (Manuel, 1955). The four wellknown local farmers will be determined in coordination with municipal agriculture office at Tapaz, Capiz Philippines. The local rice and crop in the local community will be identified as participants of this study.

Locale of the Study

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart. Below is an example. This can be modified base on your desired Work plan.)

Research Objectives	Year 1										Year 2	
	Oct	Nov	Dec	Jan	Feb	Mar	Apr	June	July	Aug		

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- PROP-01
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	November 25, 2019
			Page	Page 6 of 8

1. Preparation and presentation of research proposal													
2. Data collection of existing local rice and crops farmers in Capiz													
3. Preparation of checklist/questionnaires for intended data to be gathered													
4. Hiring of data entry staff/enumerators													
5. Distribution, gathering of data and collection of checklist/survey questionnaires on identified areas													
6. Recording, analysis and interpretation of the data gathered													

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(16) Targets Beneficiaries (Who the clienteles are and what are the expected outcome/effects of the use of the projects output)

- Future researchers
- Extension providers
