(9) Rationale

Students' academic engagement depends on various factors related to personal learner characteristics, the teacher, the teaching methodology, peers, and other features in the learning environment.

Cognitive, metacognitive, affective, social, task-related, communicative, and foreign language-related factors may influence academic engagement. Rather than existing in isolated spheres, the factors contributing to an individual's academic engagement intertwine and overlap. The relationships students cultivate with others are prominent in several of these areas. Positive interpersonal relationships enhance individuals' enthusiasm for learning (Mercer & Dörnyei, 2020), which benefits sustainable learning success and self-confidence.

Several studies have focused on enhancing academic engagement to enrich education quality and students' educational success (Christenson et al., 2012). The factors predicting students' engagement in foreign language learning contexts are under research and need more work (Philp & Duchesne, 2016; Oga-Baldwin, 2019).

Social-Emotional Learning (SEL), as an integral constituent of basic education, has recently attracted the researchers' and educators' attention (Zhou & Ee, 2012). Several studies have confirmed the effect of SEC on students' academic life; for example, predicting students' grades (Elias & Haynes, 2008; Durlak et al., 2011), students' academic attitudes and emotions (Wang et al., 2016); academic engagement (Zins et al., 2007), interpersonal relationship (Zins et al., 2004; Delay et al., 2016).

According to Duckworth et al. (2007), a gritty person not only try to complete at hand-works but also make an attempt to extend his/her persistence over time. The advantage of these people is their stamina. Duckworth et al. (2007) believe in grit as a two-dimensions construct: *consistency of interest* referring to one's enduring passion regardless of disappointments or failures and challenges, and perseverance of effort which points to the person's inclination toward working strenuously and continuous investment of energy despite confronting challenges. Besides intelligence's crucial contribution to academic achievement, Duckworth et al. (2007) argue the vital role of non-cognitive characteristics like persistence.

Social-emotional competence, grit, and academic engagement likely influence pre-service teachers to succeed. However, there needs to be more empirical evidence linking these concepts to pre-service teachers in a Philippine state university context.

(9-A) Project Description

The study will be conducted in response to the lack of predictors of academic engagement of pre-service teachers as linked to grit and social-emotional competence.

(10) Objectives/Statement of the Problem

This study will aim to determine the relationship between grit and social-emotional competence in the academic engagement of pre-service teachers.

Specifically, this study will seek answers to the following questions:

1. What is the level of social-emotional competence of pre-service teachers?
2. What is the level of the grit of pre-service teachers?
3. What is the level of academic engagement of pre-service teachers?
4. Is there a significant relationship between pre-service teachers' social-emotional competence, grit, and academic engagement?
5. Can social-emotional competence and grit predict academic engagement?

(11) Review of Literature/Prior Art Search

Engagement works as a learner-initiated path to widely admired educational outcomes like an academic achievement. It refers to learners' active involvement in learning (Christenson et al., 2012). It relates to the range of efforts learners make to move from not understanding and unknowing to

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
	Document Title:	RESEARCH PROPOSAL	Revision No.	00
			Effective Date	November 30, 2019
			Page	Page 3 of 11

understanding and knowing and, as a result, achievement. Overall, academic engagement represents "what students do to make academic progress" (Reeve, 2013, p. 580).

Yang et al. (2019) studied the impact of SEC on students' emotions, interpersonal relationships, and academic achievement. They found predictive power for SEC regarding students' ultimate accomplishment. Li (2019) examined the relationship between emotional intelligence and positive emotions of English language students in China. The results indicated a correlation between the SEC and the studied variables like learning achievement and foreign language enjoyment.

Considering the outstanding contribution of persistence and continued effort to the L2 learning process, the construct of grit has received significant attention, particularly in the Chinese context (e.g., Lee, 2020; Wie et al., 2020; Dewaele & Li, 2021). It has been positively associated with L2 performance (Kramer et al., 2018), enjoyment and willingness to communicate (Teimouri et al., 2020), academic outcomes (Akos & Kretchmar, 2017), motivation, and emotions (Changlek & Palanukulwong, 2015).

The study's results by Zhang et al. (2022) confirmed a relationship between social-emotional competence, grit, and academic engagement. Both grit and SEC can predict the engagement of EFL students positively and significantly. There is a positive and direct relationship between Chinese EFL students' grit, social-emotional competence, and academic engagement. Compared to social-emotional competence, EFL students' grit can predict more powerful academic engagement.

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested).

This study will aim to determine the relationship between social-emotional competence and grit on the academic engagement of pre-service teachers, as shown in Figure 1.

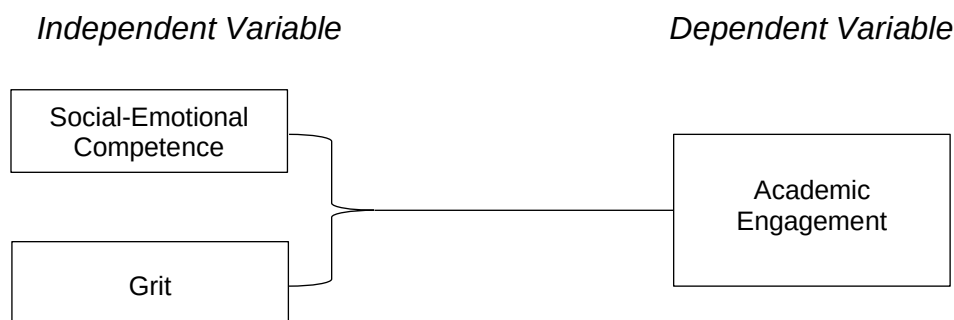

Figure 1. Schematic diagram showing the relationship between the independent and dependent variables.

(13) Methodology

Research Design and Sampling

This descriptive-correlational study will use cluster sampling with proportional allocation to determine the respondents in three campuses of Capiz State University offering a Bachelor of Secondary Education program. Cochran's formula will be used in determining the sample size.

Respondents

The study's respondents will be the pre-service teachers duly enrolled in the three

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
	Document Title:	RESEARCH PROPOSAL	Revision No.	00
			Effective Date	November 30, 2019
			Page	Page 4 of 11

campuses of CAPSU during the second semester of the school year 2022-2023.

Instruments

The data for the study will be collected employing a Likert scale, with four separate sections for demographic information, students' social-emotional competence, grit, and academic engagement. These scales will be adopted from the *Social-Emotional Competence Questionnaire (SECQ)* of Zhou and Ee in 2012, the *Grit Scale* of Duckworth et al. in 2007, and the *Academic Engagement Scale* of Reeve in 2013). The questionnaires will be face validated by a panel of experts comprised of a psychometrician, an educational researcher, and an English language professor. The Social-Emotional Competence Questionnaire and Grit Scale consisted of 25 and eight Likert items, respectively. Finally, the questionnaire on students' academic engagement presented 17 items that measure students' perspectives on their engagement toward academic affairs with five points (1: Strongly disagree to 5: Strongly agree).

Data Gathering Procedure

Permission from the university president and vice-president for academic affairs will be secured to ensure that campus administrators and deans will allow the administration of questionnaires to the respondents. The questionnaires will be in Google Docs format, and the link will be sent to the respondents.

Data Analysis

Mean and standard deviation will be used to analyze descriptive data. In contrast, the Pearson correlation coefficient and multiple regression analysis will be used to determine inferential data on significant relationships and significant predictors, respectively. SPSS will be used in processing the data.

(14) Major Activities/Work plan										
Activities	Year 1				Year 2					
	Jan-Mar	Apr-Jun	Jul-Sep	Oct-Dec	Jan-Mar	Apr-Jun	Jul-Sep	Oct-Dec	Jan-Mar	Apr-Jun
1. Request for approval to conduct the study from the university president										
2. Face validation of the instruments										
3. Administration of the instruments										
4. Analysis, Data Processing, Finalization, Presentation, etc.										

(15) Expected Output

The result of this study will serve as one of the bases in developing a training design intended to further enhance the competence of pre-service teachers in facing the demands of the academic and pre-service teaching aspects.

(15) Technology Transfer Activity Design
