(9) Rationale

In a rapidly changing world, a nation always root for the success and progress of its citizen through the support and services it provides. As a matter of fact one of its focus is to help the nation's most impoverished families with education and healthcare assistance.

For many, every day is a joust against factors that hinder them to reach full potential or self-actualization. One of these factors that have challenged a myriad of past and present generations is poverty. As defined by Crossman (2017), poverty is a social condition characterized by the lack of resources necessary for basic survival or necessary to meet a certain minimum level of living standards expected for the place where one lives. This definition is supported by the Asian Development Bank (2013) which revealed that the causes of poverty are low employment opportunities, substandard to moderate economic growth for several decades, income inequality, and external shocks such as natural calamities, economic crises, and political issues.

In order to resolve this issue, an intervention was done by the state in order to protect life and combat poverty through the enactment of Pantawid Pamilyang Pilipino Program. Pantawid Pamilyang Pilipino Program (Pantawid Pamilya) or the Philippine Conditional Cash Transfer Program (CCT) is a flagship social protection and poverty reduction program of the Department of Social Welfare and Development (DSWD). Its three-fold objectives are to build human capital; break the intergenerational cycle of poverty; and to rebuild and strengthen the family bonds and values of its poor household beneficiaries (Cabrera III, 2014).

Conditional cash transfer programs have been regarded as an effective way to reconcile safety nets—or more generally social assistance policies—with investments in human development benefiting the poor. Since 2008, the 4Ps program has served more than 5 million impoverished household and in 2022, the 4Ps program assists more than 800,000 families classified as poor and near-poor based on the Standardized Targeting System and the poverty threshold issued by the Philippines Statistics Authority (Borgen Project, 2022).

Moreover, the program is also designed to contribute to the country's commitment of meeting the Millenium Developnt Goals (MGDs) These MDGs include: (1) eradicating extreme poverty; (2) achieving universal primary education; (3) promoting gender equality and empowering women; (4) reducing child mortality; and (5) improving maternal health. According to government estimates, in 2009, about 26.5 percent of Filipinos were living below the poverty line, significantly lower than the 33.1 percent recorded in 1991, the baseline data.and in close partnership with the Department of Education (DepEd) and Health (DOH), among others (Cabrera III, 2014).

The 4Ps beneficiaries desires for a comfortable life and abundant resources. According to the Social Policy brief (2020), the 4Ps has consistently showed encouraging results in keeping children healthy and in school. Both outcomes are important indicators of human capital accumulation leading towards increased productivity in adulthood and eventually, breaking the inter-generational transmission of poverty. Moreover, it has proven to have impact in education, either directly, by means of the educational and health grants of the program, or indirectly, by uplifting the total human condition of its recipients.

As observed by the researcher, some children of the 4Ps beneficiaries earned a degree and was able to find job. Other household would claim that it had augmented to their income allowing them to provide needs for the family. Moreover, the researcher would often hear the clamor about the reduction of labor force, for instance in the agricultural sector, where farm owners struggle to look for people who will help during harvest season.

With its years of implementation, we now look at the outcome and effects of the said program. Do these households able to enjoy the benefits and services offered by the program? What are the challenges encountered by the beneficiaries and what do they aspire in life? How did it affect the labor force in the agricultural sector?

Understanding the benefits, challenges and aspirations of the 4Ps beneficiaries and its impact on the labor force in agricultural sector will provide a glimpse of the impact of the government's 4Ps program. Moreover, there is a need to listen to beneficiaries' experience in order to review and strengthen the services offered by the program.

The researcher would like to know the benefits, challenges and aspirations dealt by the 4Ps beneficiaries and its effect on the labor force participation in the agricultural sectors in the province of Capiz.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be

mentioned. .)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

The main concern of this study is to describe the lived experiences of the 4Ps beneficiaries and its impact on the labor force participation in the agricultural sector in the province of Capiz.

Specifically, it seeks to provide answers to the following questions:

1. What are the lived experiences of the 4Ps beneficiaries?
2. What are the benefits of 4Ps beneficiaries?
3. What are the challenges encountered of 4Ps beneficiaries?
4. What are the coping mechanism of 4Ps beneficiaries?
5. What are the aspirations of the 4Ps beneficiaries?
6. How can you describe the service delivery of the 4Ps programs
7. What are the effects of the 4Ps to the labor force participation in the agricultural sector?

(10) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of – the-art of current technology / information from which the project proposal will take-off).

Local

In the Philippines, it cannot be denied that their citizens are under the circumstance of poverty. Most of the time, making a living for their families and especially for their children is really a hard task. Since basic needs, especially food are impossible for many, it can be deemed that education is an even harder privilege to have. Even though the country recognizes the importance of education in promoting progress and development, still, poverty left no space for education, it consumed everything. Data gathered by the National Statistical Coordination Board (2014) show that more than one-quarter of the population fell below the poverty line in the first semester of 2014, an approximate 78 percent increase since 2013. Poverty as a social problem brought great impact on the lives of the people especially on families who are exposed to this situation.

Pantawid Pamilyang Pilipino Program (Pantawid Pamilya) or the Philippine Conditional Cash Transfer Program (CCT) is a flagship social protection and poverty reduction program of the Department of Social Welfare and Development (DSWD). Its three-fold objectives are to build human capital; break the intergenerational cycle of poverty; and to rebuild and strengthen the family bonds and values of its poor household beneficiaries (Cabrera III, 2014).

The Department of Social Welfare and Development (DSWD welcomes the results of the third impact evaluation (IE3) on the Pantawid Pamilyang Pilipino Program (4Ps) conducted by the Philippine Institute for Development Studies (PIDS). The IE3, which was conducted from 2017 to 2018, indicated that, “the program has desirable impacts on education and health of children and pregnant women.” It also gathered positive results on household welfare such as income and food security, community participation, and awareness of basic means to mitigate vulnerabilities such as disaster preparedness among adults; and, strong determination of children to complete and succeed in school, despite of the challenges.” Among the specific gains of the program include: the 1) positive impact on enrolment of children aged 12 to 17 yrs. old; 2) Decrease of hunger incidence among 4Ps 3) increased awareness and modern use of family planning methods among program beneficiaries; 4) increased prenatal care services and skilled birth attendance among women beneficiaries; 5) increased access to child care services such as deworming, vitamin A supplementation, and visitation of health facilities for weight monitoring; 6) improved household welfare; and 7) increased participation in community and community development activities among beneficiaries (Social Marketing Division, 2022).

Moreover, the study also showed that 4Ps does not encourage dependency. Beneficiaries do not have higher spending on vice goods such as alcohol, tobacco, and gambling compared to non-4Ps beneficiaries. The result of the IE3 also validates the earlier findings of the program being on track in keeping children healthy and in school, as well as positive change in behaviors (Social Marketing Division, 2022).

On the other hand, in an article released by the Senate of the Philippines (2022), Senator Win Gatchalian opined that 4Ps has yet to achieve its objective of alleviating poverty among indigent households.

Also in the study of Pescador (2019), revealed that 4Ps has an adverse effect on rural productivity because of the refusal of the 4Ps beneficiaries to undertake hard farm work because they have monthly financial support from

		Page	Page 4 of 9

government. It is an indication of the emancipation of the farm workers and fisherfolks from the hard farm work which offers oppressive wages. It showed a danger sign of a growing mentality of mendicancy on the part of poor families who receive monthly allowances and now an additional amount for their rice allowance. The program has also offered an avenue for corruption especially in many poor areas where the beneficiaries' ATM cards are controlled by local officials or loan sharks who offer "cash advances" to the families and later would get a "cut" of the poor families' money. Lastly, families who line up in front of the Land Bank of the Philippines to withdraw their cash dole-outs from the ATM would later be seen in Jollibee and the department stores buying cellphone loads.

International

In an effort to reduce poverty in both the short and long term, conditional cash transfer programs (CCTs) provide cash entitlements to eligible beneficiaries who meet a set of predetermined conditionalities (Krishnan et al., Reference Krishnan, Amarchand, Byass, Pandav and Ng2014; Millán et al., Reference Millán, Barham, Macours, Maluccio and Stampini2019). Although smaller-scale CCTs exist, many programs operate at a national scale, such as Brazil's Bolsa Familia and Mexico's Progres-Oportunidades-Prospera programs. Such CCTs have been lauded for their ability to reduce poverty and promote human development (Krishnan et al., Reference Krishnan, Amarchand, Byass, Pandav and Ng2014; Bastagli et al., Reference Bastagli, Hagen-Zanker, Harman, Barca, Sturge and Schmidt2019). Despite these potential benefits, CCTs have been criticised for the additional burdens that conditionalities impose on beneficiaries, the unequal distribution of entitlements, the relatively small size of cash grants, challenges with service provision, disruptions to existing social relationships, and limitations to beneficiaries' sense of agency (Vadapalli, Reference Vadapalli2009; Benderly, Reference Benderly2011; Oduro, Reference Oduro2015; Fragoso, Reference Fragoso2021).

In the study of Fiszbein et., al (2009), showed that there is good evidence that conditional cash transfers (CCTs) have improved the lives of poor people. Transfers generally have been well targeted to poor households, have raised consumption levels, and have reduced poverty, by a substantial amount in some countries. Offsetting adjustments that could have blunted the impact of transfers, such as reductions in the labor market participation of beneficiaries, have been relatively modest. Moreover, CCT programs often have provided an entry point to reforming badly targeted subsidies and upgrading the quality of safety nets. The report thus argues that CCTs have been an effective way to redistribute income to the poor, while recognizing that even the best-designed and best-managed program cannot fulfill all of the needs of a comprehensive social protection system. CCTs therefore need to be complemented with other interventions, such as workfare or employment programs and social pensions. The report also considers the rationale for conditioning the transfers on the use of specific health and education services by program beneficiaries.

Conditional cash transfer (CCT) programs are increasingly perceived as an effective tool for poverty alleviation. CCT programs have been highly successful in Latin American countries, and are increasingly perceived as a magic bullet for poverty reduction. Wellknown programs that follow this approach include the Progres (now called Oportunidades) in Mexico, Bolsa Escola and Bolsa Familia in Brazil, Red de Proteccion Social in Nicaragua, Programa de Asistencia Familiar in Honduras, Program of Advancement through Health and Education in Jamaica, Food-for-Education (FFE) in Bangladesh, and Subsidio Unico Familiar in Chile (de Janvry and Sadoulet 2006).

The impact of government transfers to families or individuals has long been a field of theoretical and empirical research for both the labor and development economics literatures (Moffitt, 2002). The focus of the labor economics literature is on the effect of welfare programs and negative taxes on both labor force participation and hours worked, along with their impact on business cycle. In the development economics literature the disincentive to work is related to the possibility of generating program dependence for beneficiaries of social transfer (Ribas & Soares, 2011).

While there is no guarantee that the success of CCT programs in some countries can be replicated in others, they provide an important example that can yield an array of good practices from which other countries can learn (Ali, 2007).

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.

This research is anchored on Self-Efficacy Theory of Albert Bandura, Self-Determination Theory of Edward Deci and Richard Ryan, Organizational Effectiveness by Michael T. Hannan and John Freeman

Self-Efficacy Theory

Self-Efficacy Theory was first introduced by Albert Bandura on 1977. Bandura states that self-efficacy is a person's set of beliefs, and it determine how successfully they can carry out a plan of action in future scenarios (Garrido, 2020).

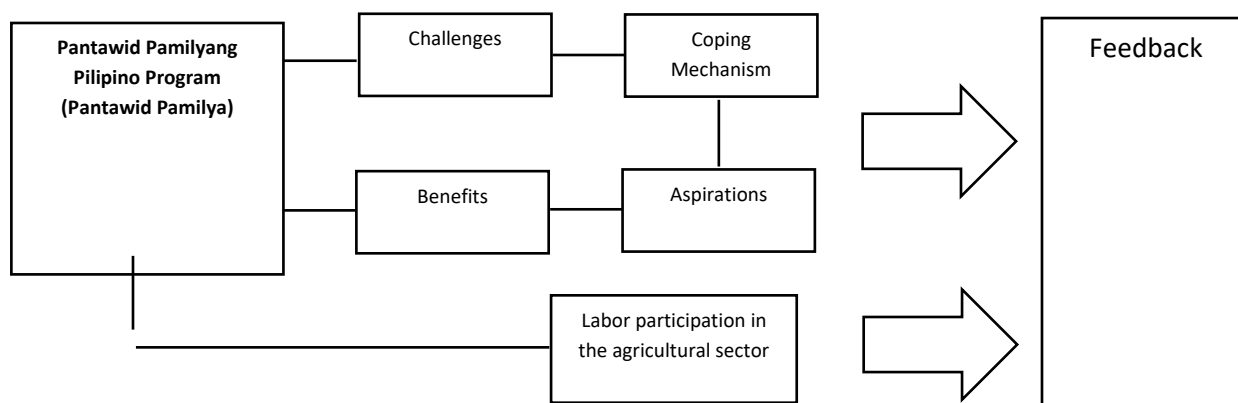

Self-Determination Theory

	Document Type: DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
		Revision No.	00
	Document Title: RESEARCH PROPOSAL	Effective Date	November 30, 2019
		Page	Page 5 of 9

The Self-Determination Theory focuses on the behavioral concept of self-motivation and finds that peoples' experiences of independence are positively correlated with their perceptions of choice, self-efficacy, and relationship to experiences. There is an important connection between a student's self-determination, the internal source of causes, and their will as affected by their perceived choice (Ryan & Deci, 2012).

Organizational Effectiveness Theory

Organizational effectiveness refers to the efficiency and capability of an organization to realize its vision and goals, and it is one of the indicators to evaluate the development and vitality of the organization (Drucker, 2022).

(13) **Methodology** (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

This study will employ mixed methods research design is a procedure that strategically integrates or combines rigorous quantitative and qualitative research methods to draw on the strengths of each.

Getting 30% percent from the total population and utilizing multi-stage sampling, drawing a sample from a population using smaller and smaller groups at each stage. Moreover, key informant interviews and content analysis will be employed and focus group discussion with the agriculture sector is also a part of gathering procedure.

Furthermore, it will employ the inductive analysis, the data is coded without trying to fit the themes into a pre-existing coding frame or the researcher's preconceptions about the research (Brown & Clark, 2006). So, themes emerge through the data itself without paying attention to the themes included in other studies.

Locale

4Ps beneficiaries in the province of Capiz for year 2022 - 2023.

	Document Type: DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
		Revision No.	00
	Document Title: RESEARCH PROPOSAL	Effective Date	November 30, 2019
		Page	Page 6 of 9

Informants

According to Salkind (2010), in order to identify subjects who will be included in a research study, a set of predefined characteristics known as the inclusion criteria was followed. Inclusion criteria, along with exclusion criteria, make up the selection or eligibility criteria used to rule in or out the target subjects for a research study.

Inclusion Criteria	Exclusion Criteria
1. A resident of Mambusao, Capi	1. A non-resident of Mambusao, Capi
2. Beneficiary of the Pantawid Pamilyang Pilipino Program	2. Non-beneficiary of the Pantawid Pamilyang Pilipino Program
3. Stakeholders from the agricultural sector	4. Non-stakeholders from the agricultural sector
5. Not suffering from mental illness or speech defect	4. Suffering from mental illness and speech defect

Instrument

The data will be obtained through the use of audio-recorder and note taking. The researchers will have a one on one interview with the informants about their teaching experience as CapSU faculty in the era of pandemic.

Researcher-made questionnaire:

1. What is your name?
2. What is Pantawid Pamilyang Pilipino Program (Pantawid Pamilya)?
3. What can you say about being a 4Ps beneficiary?
4. What are the benefits of 4Ps beneficiaries?
5. What are the challenges of encountered by 4Ps beneficiaries?
6. What are the aspirations of 4Ps beneficiaries?
7. How can you describe your experience as a 4Ps beneficiary?
8. How can you describe the service delivery of the 4Ps?
9. What are the effects of program to the labor participation in agricultural sector?

Research Tools

The research tools that will be employed in this study are interview and direct observation. A self-made interview guide will be used to gather the stories and experiences of the informants. The interview questions help elicit responses from them and understand the data evolving from the teaching experience of the informants.

Data Gathering Procedure

The researcher will obtain the data through one on one interview. The informants will share their experiences as 4Ps beneficiaries and the stakeholders from the agricultural sector, thereby creating a significant result for this study.

Furthermore, the researcher will ensure to set the mood and schedule a time to conduct the interview and focus group discussion in order to help the informants express experiences related to the topic.

The interview for this study will be conducted in Hiligaynon, Filipino or English and will last approximately one hour. It will be conversational style of interview allowing the informants to be comfortable and honestly and freely answers the questions. The informants will voluntarily share their stories and experiences during the interview which will be recorded using a cell phone.
