(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

The planning and development of the nation's young entrepreneurs are facilitated through enterprise incubation, a learning environment for students that offers a pliable combination of resources, professionals, coaches, and advisors. This research was exploratory and descriptive, which uncovered the difficulties encountered by the students when using the college's business incubation services, which are necessary for the B.S. Entrepreneurship program's smooth operation and the implementation of a business plan. It was noted that the weak framework and procedure of the services made it difficult for students to implement their company plans. To successfully implement the entrepreneurship curriculum, the university administrators set out to create the Agri-Aqua Technology Business Incubator of Capiz State University. This initiative will increase the students' productivity and sustainability in their start-ups and, ultimately, the graduates.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

Keywords: *Enterprise Incubation, Entrepreneurship Program, Business Consultancy, Free Enterprise*

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

This research was in accordance with the relevant provisions of the Higher Education Act of 1994, also known as the Republic Act (R.A. No. 7722), and with the support of the results-based system for quality assurance promoted by CMO No. 46 s. 2012, which was also referenced to CMO No. 46 Implementation Guidelines. Regardless of the institution of higher learning a graduate comes from, it outlines the essential abilities anticipated of B.S. Entrepreneurship graduates as of 2012.

Section 18 of CMO No. 46 s. 2012 discussed the main component of any B.S. Entrepreneurship Program, including its most valued experiential erudition resource, the business incubation.

Business incubation aims to nurture and expand small and start-up enterprises by assisting them through the early phases of development and transition. It is a unique and highly adaptable blend of facilities, people, and business growth techniques (UKBI, 2004). A more recent development in results-based academic achievement is enterprise incubation, which structures the development of the country's prospective entrepreneurs in the academic environment.

The students as well as the student organizations could utilize the facilities in incubation to conduct important meetings, meet with clients, and carry out any other duties required to successfully run their entrepreneurial ventures.

A professor or other expert with extensive business and entrepreneurial expertise who can advise student enterprises and support their development must oversee the company incubation facility.

			Page	Page 3 of 12

The current study filled the gaps in the students' knowledge of the business incubator facility. In this way, the University's business incubator assisted the students in putting their planned businesses into action before they graduated.

Also, it is unique in the body of literature since enterprise incubation was supported in a college environment rather than on the commercial side. Consequently, evaluating how the institution promotes the development of prospective entrepreneurs is important in making the distinction.

This study investigated the difficulties of a sustainable free enterprise platform facing the business incubator services for students. It addressed students' difficulties when using business incubator services like infrastructure, coaching, and networking and the changes that should be made to enterprise incubator services to create a framework for sustainable free entrepreneurship.

Sean and David (2004) asserted that the logic model for enterprise incubation served as the study's foundation. It emphasizes the incubation process's importance in anticipating and comprehending incubation outcomes. Additionally, it stresses that the incubator serves as a tool rather than a goal in and of itself. As an operationalization strategy of a community to assist the survival of fledging enterprises, an incubator is more of a supporting tool than a fundamental or important one.

Hackett et al. (2004) opined that the financial presentation of "incubatee" at the moment of incubator outflow used to gauge an incubator's capacity on business in creating alternatives by selecting underperforming, however, enticing transitional possible enterprises as incubator entries as well as working out viable alternatives by way of counseling and monitoring. Hence, the study of Lee et al. (1999) also considered the objective and operational strategy, facilities (physical and human resources), coaching, and networking for the University's provision of services to Business Incubator.

Also, based on institutional theory, businesses track their rivals and exhibit an isomorphic tendency (Dimaggio and Powell, 1983; Zucker, 1987). Moreover, Kuhns (1999) asserted that the process of institutionalization and how institutions affect organizations, particularly in terms of organizational structure and internal workings. Presseley et al. (1996) posited that the scaffolding theory, which is equally pertinent to this endeavor, affirms that this communicative strategy should focus on providing the learners with conceptually-driven support when they need it, and with an initial high degree that reduces as the learners build proficiencies.

An incubator manager-incubated would be the focus of the scaffolding perspective as a learner. Researchers looking to investigate the educational coaching parts of the incubator-incubation phenomenon are encouraged to use this approach, even though it does not address our process model's selection and resource infusion aspects. The study's focus was the University's unwavering difficulties with the B.S. Entrepreneurship Program's business incubator. The study's main areas of interest were operational strategy, infrastructure, coaching, and networking constructions. The fourth-year B.S. Entrepreneurship students from Capiz State University's College of Management in Roxas City were used in the study.

The Framework of the Study

Figure 1. The analytical framework was developed to address the current gap in the college's provision of incubation services to entrepreneurship students.

(11) Materials and Methods or Methodology (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

This research was exploratory and descriptive, using quantitative and qualitative collection techniques of data to identify the problems with campus business incubator programs. The study's respondents were 83 fourth year B.S. Entrepreneurship students enrolled at Capiz State University in Roxas City. The main informants for the in-depth interview were the deans and professors who teach entrepreneurship courses, as well as the business plan's execution facilitator who served as the consultant and mentor of the company's incubation. To collect data, this research utilized a tool and guide questions for an interview. A reliability coefficient of 0.889 was used to validate and test the researcher-made tool. The interview results were evaluated and interpreted after the information was run through SPSS version 20. Ethical considerations were also done prior to, during, and following the study's conduct.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

Business Plan Executors' Characteristics

As to age, 25 of the respondents aged between 18 to 20 years old; 56 aged between 21 to 23; and two aged between 24 to 26. With regards to sex, 18 men and 65 women were enrolled in the B.S. Entrepreneurship program. As to the nature of the organization, the kind of organization that the tenth business plan implemented was a partnership.

For the initial capitalization, depending on the nature of their products, the capitalization of partners ranged from PhP40,000-PhP65,000. Given that business plan's implementation involved a provider of goods.

Difficulties the Students Used in Services of Business Incubator

The infrastructure, coaching, and networking issues students have with Business Incubator Services are covered in Table 1.

Infrastructure

The infrastructure-related difficulties of B.S. Entrepreneurship students with the business incubator services are shown in Table 1, with an overall mean of 3.626 and "difficult" as the verbal interpretation. It means that the University had issues providing students with facilities and equipment as a government-funded university. But, it was also something that several state schools and universities that offered the Entrepreneurship curriculum encountered.

To provide the students with a high-quality education, the college is addressing the gaps that the students are experiencing. Article VI, Section 18 on the Laboratory of CMO No. 18 Series of 2017 states that business incubation is a requirement for every B.S. program. A program on entrepreneurship is the greatest way to get practical training. The incubator must be a fully functional business hub that offers student services. A faculty or other qualified person who can mentor student enterprises and foster their growth must oversee the start-up center. This person should also have excellent business acumen.

It was noted during the interview, the college professors also informed the administration of the lack of the resources required to assist students in implementing their business proposals. They thought adequate facilities would make it easier for students to execute their ideas successfully.

Coaching

The 3.55 grand mean with a verbal interpretation of "difficult," revealed that the students' coaching session received less attention since the teacher in charge gave it less priority. Studies by Bacon (2003) and Audet et al. (2012) suggested coaching as a development strategy, in which a person who wants to improve their abilities chooses to receive assistance from another person; suppose a mentor-protégé relationship is formally or inadvertently established. In that case, the outcome will differ (Eby and Lockwood, 2005; Audit and Couteret, 2012).

To encourage the kind of learning that is most suited to entrepreneurs, namely learning via action, coaches appear to need to put themselves on an equal footing with the business owners they are advising, according to Deakens et al. (2000), Gibb (2000), Dalley and Hamilton (2000) in Audet et al. (2012).

The effectiveness and success of incubators depend on the supporting services they offer to their clients; as a result, the incubators provide these services, as emphasized by Lalkala (2003), Thetaranoth (2007) in Sunchai Yamockul et al. (2019).

The informant's insights linked with other studies that those business incubators must give incubates the fundamental instruction, coaching, and mentoring they need to succeed in marketing, e-commerce, foreign markets, etiquette in business, and public speaking (Lee and Osteryong, 2004; Gerl, 2004).

			Effective Date	
			Page	Page 6 of 12

Networking

As to networking, the result revealed a 3.76 mean with "difficult" interpretation. It suggests that students majoring in entrepreneurship face difficulties in developing their talents in areas like food and technology for product creation. They also struggle with getting access to funding and business coaching simultaneously.

Conferring to Lin et al. in 2012, as cited in Sunchai Yamockul et al. (2019), incubators of business must encourage relationships between the “incubatees” and higher education institutions and provide an atmosphere to the network with entrepreneurs, firms, and others outside the business community. The incubator’s success depends on obtaining support and assistance from the private and government sectors, as well as business networking, matching, grants, financial institutions’ funding, and project capitalists. Furthermore, Duff (1994) as well as Lewis et al. (2011) in Sunchai Yamockul et al. (2019), incubators of business must supply skilled employees and specialists who can match their technical requirements, offer incubates staffing services, and give support and help to entrepreneurs once the incubation project is complete.

The current results recommended the J-curve model. It depicts each start-up journey in the phase of opportunity progress. Start-ups provide negative returns before rapidly expanding until maturity (Grabenwarter and Weidig, 2005). Several reasons caused poor returns, including resources, technology, and environment, in the early phases of a start-up. According to the study by Amr Kebbi and David Valliere from 2010, incubation can lower a start-expenditure rate throughout its product development phase and boost it during its activity to acquire new markets.

Because of this, a start-up being incubated can reach its breakeven point faster and for less money than if it weren't. It is the end product of it utilizing the infrastructure, coaching, and networking services incubators provide. These services help incubated start-ups save money while increasing their networking-based commercial potential as the informant implied.

The current findings agreed with those of Chandra and Fealey (2009), Munkongsujarit’s (2016), Sunchai Yamockul’s et al. (2010), and other researchers who found that both incubators and incubates suffered from a lack of funding, which pointed to one of the main obstacles to the effectiveness of business incubators.

Table 1. Difficulties the students used the services of the business incubator.

Statements	Mean	Verbal Interpretation
Infrastructure		
1. Equipment and facilities for incubation are adequate.	4.18	Difficult
2. Equipment and facilities for incubation are evident.	3.69	Difficult
3. The business has the ability to enter the location of the business center.	3.76	Difficult
4. The University assists the implementers of the business.	3.55	Difficult
5. The faculty assists the students.	3.39	Somewhat Difficult
6. There is an access to a network	3.21

of entrepreneurs.		Somewhat Difficult
Grand Mean	3.63	Difficult
Coaching		
1. The transfer of technology from the classroom to the business is put into practice.	3.39	Somewhat Difficult
2. Development works on a business incubator .	3.36	Difficult
3. Students have access to business consulting.	3.82	Difficult
4. Students get mentoring on enhancing business operations, including marketing, operations management, financial management, and risk assessment.	4.15	Difficult
5. The faculty assists and counsels students on how to obtain various loans and financial aid for starting a business.	4.09	Difficult
6. Access to faculty coaching and mentorship sessions for business implementers.	3.15	Somewhat Difficult
Grand Mean	3.55	Difficult
Networking		
1. There is an institutional entrepreneurship network for university graduates, other successful businesspeople, and students.	3.97	Difficult
2. There is a connection with a different department to enhance the implementers' skills.	4.00	Difficult
3. There is a restricted financial and commercial opportunities.	3.76	Difficult
4. There is a lack of cooperation and network between the institution, local community support organizations, and government agencies.	3.45	Difficult
5. There is a robust network of faculty and business implementers.	4.06	Difficult
6. There is an absence of connections to other organizations for the development of the product's improvement.	3.36	Somewhat Difficult
Grand Mean	3.76	Difficult

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

The findings demonstrated that because of a deficiency in resources, limited technology access, and a poor strategy, including the college's motivation for business incubation services, the student's business plans are not effectively monitored and prioritized. The college made it difficult for students to get infrastructure, mentors, and networking for their businesses.

It is advised that the Agri-Aqua Technology Business Incubator of the University is the new enterprise platform for B.S. Entrepreneurship students to get support on their start-ups in the implementation of their enterprise proposals to resolve difficulties successfully. It is also emphasized that the platform will also provide access to the BS Entrepreneurship graduates to commercialize and pitch business ideas to potential financiers.

The University business incubator is suggested to be included in the curriculum for B.S. Entrepreneurship students studying technology transfer and innovation. As a result, to help the students, the faculty member in charge of carrying out the planned business may work with the entrepreneurs and act as their mentor and coach; likewise, to create a comprehensive action scheme to assist them with the launch of their businesses. To aid in the success of their start-up enterprises, the college may urge its graduates to join as well as utilize the Agri-Aqua Technology Business Incubator services of CAPSU.

If funds are available, the institution may also build an entrepreneurial hub for those students wishing to develop their enterprising skills to the fullest and promote their inventiveness for potential prospective commercial opportunities.

(14) Output (Indicate the specific products, processes, or services which the project has produced; quantify when possible.)

Business ideas of the students are identified and process for possible intellectual property protection. Also, a project will be implemented for consultation.

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

- Business Registration
- Intellectual Property Protection
- Entrep Corner-possible partnership with various private and public organizations
- Project HELP series of capability, training, and enhancement activities for students and partners (Food Safety and Current Manufacturing Practices, Halal Certification, Branding, Packaging, Accounting for Non-Accountants Activities)

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period)
