| <p><b>(9A) Abstract</b> (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)</p> <p>Entrepreneurial leadership of the Indigenous People does not focus on adapting their organizations, they focus on using predispositions, behaviors, and skills that are used to spot opportunities and exploit them for the existing resources and contexts. The purpose of this study is to determine the entrepreneurial leadership and practices of the Indigenous People, the Ati in Dumarao, Capiz, Philippines, and the Maduranese in Indonesia.</p> <p>This is descriptive research utilizing the qualitative method in gathering the needed data in exploring the entrepreneurial leadership and practices of the Indigenous People towards economic development and social advancement.</p> <p>Findings revealed that Ati has poor indigenous entrepreneurial leadership and the Maduranese have the desire to grow because of their belief. Also, there is no organized IP business enterprise in Dumarao and in Indonesia the Maduranese business enterprises is registered and operated by them.</p> <p>Keywords: Entrepreneurial Leadership, Ati, Maduranese, IP Business Enterprises</p> <p><b>(9B) Keywords</b> (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                             |
| <p><b>(10) Introduction</b> (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)</p> <p>Indigenous People can identify their new direction, build a team, and bring new ideas, methods, or products to realization, but they also must face changing internal and external conditions, which they must adapt from their environment, whether they be opportunities or threats. Entrepreneurial leadership of the Indigenous People does not focus on adapting their organizations, they focus on using predispositions, behaviors, and skills that are used to spot opportunities and exploit them for the existing resources and contexts.</p> <p>The purpose of this study is to determine the entrepreneurial leadership and practices of the Indigenous People, the Ati in Dumarao, Capiz, Philippines, and the Maduranese in Indonesia.</p> <p>Literature is scarce on entrepreneurial leadership in economically developed societies alone in Indigenous communities. It seems that the role and contribution of entrepreneurial leadership in operating a successful business enterprise are taken for granted; hence, not in need of special attention.</p> <p>The <i>Ati</i> are acknowledged as the indigenous people of Panay Island, which is made up of four provinces, Aklan and Capiz to the North, Antique to the west, and Iloilo to the southeast (Baruah, K. 2000).</p> <p>The <i>Ati</i> is a group of indigenous people who live in the far-flung area of Dumarao, Capiz, Philippines. They belong below the poverty line. They prioritize their basic needs of food, water, and shelter rather than their safety, health, and well-being.</p> <p>Leadership, in particular, entrepreneurial leadership Indigenous business and enterprise development is an area that has not been given due attention and focus. In the context of Indigenous economic development and social advancement, this article argues that Indigenous enterprise development is a must and that for such development to be realized</p> |                                                                                             |

entrepreneurial leadership is a critical factor.

While business operation and entrepreneurship are relatively old, well-established disciplines, modern Indigenous business enterprises, and entrepreneurship are relatively new areas by comparison. Its growing prominence in recent times can be explained by the awakening of Indigenous peoples around the world coupled with international shifts toward First Nations rights and self-determination. Indigenous business enterprises and entrepreneurship are potentially powerful tools that can be used to promote economic independence, self-determination, and cultural preservation within Indigenous societies (Buttler and Hinch, 1996). In principle Indigenous enterprise and entrepreneurship in areas such as small to medium size business enterprises (SMEs) are accessible to individuals and groups, it requires limited capital and skills, and appears to easily accommodate values and environmental concerns shared by many Indigenous groups (Hall, 1996). Furthermore, Indigenous entrepreneurship in tourism, for example, is capable of rejuvenating local economies, minimizing the impact of negative tourism through local intervention, and strengthening, supporting, and valuing Indigenous cultural heritage (Brokensha, 1992).

Moh. Syamsuddin (2018) conducted descriptive research about Overseas Maduranese in the Special Region of Yogyakarta. The research found that all Maduranese immigrants in Yogyakarta are Muslims. They are very closely related to Islam; therefore, they use Islam as their identity because Islam gives them a feeling of pride. Changes in values and understanding of religious teachings can be caused by changes in the interactions among Maduranese immigrants themselves or due to external influences. In this case, an attitude of solidarity and pragmatism still underlies most of these Maduranese immigrants, as well as explaining that the culture of remoteness or the fondness for saving traditionally is still found among them amidst the increasing consumption patterns of society. Their appearance is simple and innocent, prioritize family life and cooperation, are hardworking, resilient, and have a high level of survival. In addition, they are easy to adapt to the existing environment, perhaps rooted in pragmatism.

Muhammd Djakfar (2016) conducted also descriptive research on Overseas Maduranese Business Ethos in Malang City on their understanding of religious dialectics with local wisdom. The research found that Maduranese ethnic group had a very high business ethos and they can compete with other ethnic groups with other businessmen. The main consideration for the Maduranese ethnic group in choosing a job is to have an income as a condition to support themselves and their families. Therefore, with this principle, they dare to enter any kind of business, especially in the informal sector which is not or rarely done by other ethnicities. Broadly speaking, the Maduranese ethnic group is divided into two (2) communities, with a background of santri and non-santri. The santri community is motivated to work due to religious factors as part of worship to God, while the non-santri community is due to environmental factors (sociological-custom-tradition), which encourage anyone as a Maduranese to work hard (nyare engon) for themselves and their families. If not, people will stigmatize them as lazy (atonggul to'ot), and incompetent (ta 'brenteng, ta' pettel, ta'bilet). From non-santri circles, it could be understood that they are more motivated because of the tradition of the Maduranese, who have a high work ethic so they finally dare to migrate outside Madura, including to the city of Malang. Work motivation as worship seems to be affected by the milieu factor, which is known to be religious, as is the character of the Maduranese community in general. From the motivation of the two groups of informants above, it could be understood that what drives the ethos of the Overseas Maduranese ethnic in Malang, is not only due to religious factors but also because of various factors that have become the philosophy and tradition of the Maduranese people from generation to generation. It is this philosophy and tradition that can be referred to as local wisdom. The two of them have complemented each other and dialectically gradually in shaping the Maduranese ethnic personality in general, among other things, it can be understood from how they do business.

|                                                                                   |                 | Effective Date                |                   |
|                                                                                   |                 | Page                          | Page 4 of 27      |

The values resulting from the dialectic continue to interact within the Maduranese, wherever they live, and carry out various activities. Without exception in business activities.

Moreover, Khofifatu Rohmah Adi, Idris, and Fatiya Rosyida (2020) also did qualitative research on the Internalization of Madura Ethnic Entrepreneurship Values. The research used observation, interviews, and documentation. The research found that entrepreneurial values that appear in Maduranese ethnic entrepreneurs are tenacity, confidence in work, high work spirit, and work ethic as reflected in their entrepreneurial behavior.

Another study from Zulaihah (2020) was about the Maduranese in Yogyakarta on their history of satay seller Maduranese migrants. This was ethnocratic research conducted for one year, through in-depth interviews and observations. The *Maduranese* are one of the tribes that have high mobility. Historically, they have migrated to other areas since the days of the kingdom. One of the targeted areas is the city of Yogyakarta, a multicultural, tourism, and culinary city. The result indicated that the history of the migration of the Maduranese to Yogyakarta dated back to the 17th century was the reign of Sultan Agung in the Islamic Mataram kingdom. There are three factors in the migration of Maduranese to Yogyakarta, namely historical and political factors, economics, and education. Meanwhile, the work done by Maduranese in Yogyakarta is mostly in the informal sector, one of which is selling satay. The work that has become hereditary has ever existed since the Dutch era. In addition, Madura satay is branded as a delicious traditional food and the success stories of other satay sellers are also the reasons for their choice to become Maduranese satay sellers.

It seems that the Indigenous People need to engage in business to survive with their day-to-day living. Good for those who were already involved; however, they still need entrepreneurial skills, mindset, and leadership for the business to grow.

According to Herron (1990), to operate a successful business, the following are necessary: (1) Product/service design; (2) Business; (3) Industry; (4) Leadership; (5) Networking; (6) Administrative; and (7) Entrepreneurial.

In addition to the list, Baum and Locke (2004) suggest that entrepreneurs need the ability to acquire entrepreneurial resources. However, the focus of this paper is entrepreneurial leadership. This focus is in line with the generally accepted view that training and education can sharpen aptitudes, therefore provide individuals with usable skill sets (Sriram & Mersha, 2006). This is even more critical in developing societies because of limited education and training opportunities. It can be argued that leadership education and training underpin each of the other skills listed above.

The benefits of entrepreneurial leadership training in indigenous and developing societies, in particular, would include the provision of entrepreneurial leadership models; exhibiting high entrepreneurial behavior; entrepreneurship and enterprise mentoring for budding and aspiring entrepreneurs; improved self-efficacy for entrepreneurs; and increased entrepreneurial passion and determination to make a positive influence in people's wellbeing. This last point is significant because unlike the Western economic system, which is abstract, it tends to focus on objects. The indigenous system primarily focuses on people, hence the need for a holistic approach to entrepreneurship.

Entrepreneurial Leadership (EL) exists at the crossroads of leadership and entrepreneurship. Some would define it just as another form of leadership. For example, many suggest that EL is the process of creating an entrepreneurial vision and inspiring a team to enact the vision in a high velocity and uncertain environment (Chen, 2007; Covin & Slevin, 2002; Ireland & Hitt, 1999; Kuratko, 2007; Surie & Ashley, 2008). There are other interpretations. For Sharma and Chrisman (1999:18), EL is seen as the process, whereby an individual or group of individuals create a new organization or instigate renewal or innovation within an existing organization. For Dess et al. (2003), entrepreneurial leaders establish conditions conducive to role performance and social exchange. Gupta et al. (2004) suggest that building commitment by forging the capacity in the organization for innovation, risk-taking,

|                                                                                   |                 |                                                |  |                |                   |

|                                                                                   | Document Title: | <b>COMPLETED RESEARCH</b>                      |  | Revision No.   | <b>00</b>         |
|                                                                                   |                 |                                                |  | Effective Date |                   |
|                                                                                   |                 |                                                |  | Page           | Page 5 of 27      |

and proactiveness are important cultural features. These definitions address the common components of leadership – vision, connecting, influencing, and persuading people – creating the conditions that lead to sustained, not random success.

The second line of thought suggests that EL refers to entrepreneurs who work in ambiguous and uncertain environments within a formalized organizational structure, but use the skills and approaches normally expected of an entrepreneur: identifying opportunities, assuming calculated risks, proactively seeking out and recognizing opportunities, and creatively pursuing innovations, which create value (Tarabishy et al., 2005). For instance, Ireland, Hitt (1999), and Sirmon (2003) suggest that EL (which they call strategic entrepreneurship) is the ability to influence others to manage resources strategically to emphasize both opportunity-seeking and advantage-seeking behaviors, thus indicating that those entrepreneurial leaders must be ambidextrous using both exploitation and exploration as their main strategic tools. This definition would enable entrepreneurs working in structured firms to be strategically entrepreneurial (Covin & Slevin, 2002). However, this line of thought also presents difficulties. While most entrepreneurs work in ambiguous situations, not all work in formalized structures. They may be entrepreneurial but not entrepreneurial leaders.

The third line of thought attempts to come to a grip with the key elements of entrepreneur theory. For Shane and Venkataraman (2000), entrepreneurship involves the nexus of three phenomena: the presence of an opportunity, the presence of enterprising individuals who can “see it,” and who are capable enough to respond to it irrespective of the existing resources. The weight of scholarly opinion (Busenitz & Barney, 1997; Kaish & Gilad, 1991; Rosenberg, 1994; Sarasvathy, Simon & Lave, 1998; Shaver & Scott, 1991; Stevenson, Roberts & Grousbeck, 1989; Venkataraman, 1997) places the entrepreneur, that person who can spot and pursue opportunities without regard to existing resources, at the center of EL. These three attempts to define entrepreneurial leadership indicate different understandings at the heart of entrepreneurial leadership theory as well as general leadership theory. One result has been a research agenda that is missing the mark. For instance, considerable effort has been used to study the entrepreneurial behaviors and attitudes of executives (Cogliser & Brigham, 2004; Covin & Slevin, 2002; Fernald, et al., 2005; Gupta et al., 2004; Ireland, Hitt & Sirmon, 2003; Lumpkin & Dess, 1996); and comparisons of leaders and entrepreneurs (Baumol, 1968; Vecchio, 2003). What is missing is a research agenda focused on the entrepreneur - someone who sees, recognizes, and exploits opportunities as a leader of individuals, teams, and organizations.

According to Gido, 2011, entrepreneurship leadership of Indigenous People (business) development is an area that has not been given due to attention and focus. In the Philippines, less number of Indigenous Enterprises in the Philippines organized.

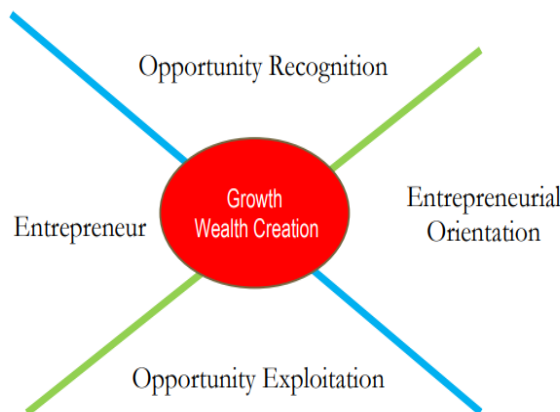

Thus, this study attempts to solve the gaps in exploring the entrepreneurial leadership and practices of the Indigenous People towards economic development and social advancement.

### **The framework of the Study**

The study was anchored on the theory of entrepreneurship by Mishra and Zachary, 2014. Entrepreneurship is defined as a process of value creation and appropriation led by entrepreneurs in an uncertain environment (Mishra and Zachary, 2014). The entrepreneurial process of value creation is driven by the entrepreneur and her entrepreneurial intention (an aspiration for entrepreneurial reward). The entrepreneurial process is not autonomous; the entrepreneur is integral to the entrepreneurial process. Thus, the entrepreneurial intention and resources are intrinsic to the entrepreneurial process. The entrepreneurial process involves the entrepreneur identifying an external opportunity; matching the entrepreneurial resources at hand with the opportunity to effectuate an entrepreneurial competence; acquiring external resources, if necessary; creating sustained value; and appropriating the entrepreneurial reward. The elements at the center of the entrepreneurial theory are growth and wealth creation, and opportunity recognition and exploitation without regard to the

|                                                                                   |                 |                                                | Effective Date |                   |
|                                                                                   |                 |                                                | Page           | Page 6 of 27      |

resources. Given the confusing nature of the entrepreneurial leadership definitions explored in previous paragraphs concerning these central elements, the researchers lean toward Vecchio's (2003) earlier conclusion that leadership theories specific to entrepreneurship have yet to be empirically established; "entrepreneurship is simply a type of leadership that occurs in a specific setting" either inside or outside existing organizations (Kuratko, 2007). Hence, the researchers believe that entrepreneurial leadership as a concept is at a crossroads. One uses the path of leadership and focuses on an indirect approach of vision, process, influence, and conditions to achieve organizational outcomes. The second path refocuses entrepreneurial leadership on its roots: the entrepreneur who makes a direct difference in growth and wealth creation by recognizing and exploiting opportunities without regard to resources available. At the center of this controversy are the words entrepreneur and entrepreneurship. If one defines entrepreneurial leadership in terms of the entrepreneurial firm, then entrepreneurial leadership's tasks are to inculcate organization-wide reliance on entrepreneurial behaviors of risk-taking, innovativeness, and proactiveness that rejuvenates the organization. If, however, one defines entrepreneurial leadership in terms of entrepreneurial people, then the tasks are to employ causal and effectual thinking skills and behavioral characteristics (risk-taking, innovativeness, and proactiveness) to take advantage of opportunities by innovating to create added value, wealth, or social benefits. If one defines entrepreneurship as entrepreneurial people, then they are talking about entrepreneurship and not leadership. In either case, they are talking about identifying and exploiting opportunities.

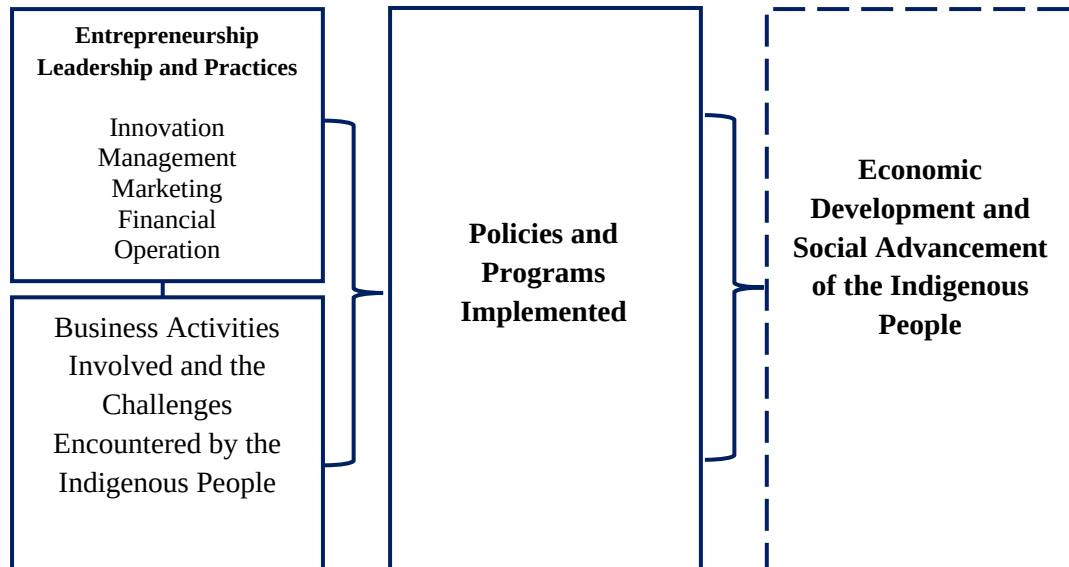

*Figure 1. The entrepreneurial theory*

A central argument for entrepreneurial leadership is that once the future is created, it needs to be sustained. The problem is that the attributes of entrepreneurial leaders - calculated risk-taking, propensity for innovativeness, proactive behaviors - do not lend themselves to sustained innovation. Entrepreneurs are consistently reinventing the future by seizing opportunities and filling previously unknown niches by creating goods and services that add value to current markets. As integral as this role is to navigate the complexity and ambiguity of postmodern society, there remains a need for leadership qualities that allow organizations to adapt to changing environmental demands. Thus, if we take entrepreneurial leadership to mean proactive and risk-taking innovators, it is not substantial enough in and of itself to sustain success in an organization. Once the opportunity is captured and the innovation reframes the market, a truly entrepreneurial leader will be searching for the next opportunity to innovate and bring a new service or product to the market. However, while this opportunity is being sought, the organization still has to sustain itself and adapt, especially as previous innovations become commonplace.

### The Conceptual Framework

The framework of analysis of the study focused on entrepreneurship leadership and practices of Ati and Maduranese; also it will seek the business activities involved and the challenges they encountered.

**(11) Materials and Methods or Methodology** (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

The purpose of this study is to determine the entrepreneurial leadership and practices of the Indigenous People in the Philippines (Ati-Dumarao) and Indonesia (Maduranese). This is descriptive research utilizing the qualitative method in gathering the needed data in exploring the entrepreneurial leadership and practices of the Indigenous People towards economic development and social advancement. The researchers did informal interviews with the Indigenous People about their entrepreneurial leadership, the business activity involved and the challenges encountered, thus, observation and documentation from August 2020 to January 2021 on the practices of their entrepreneurial activities. A content analysis was employed for the policies and programs given to them by the regulatory agencies. After knowing the entrepreneurial leadership and practices of the Indigenous People (IPs) in the Philippines and Indonesia and providing solutions to the present problems, the development of projects and policies for both countries in the economic development and social advancement of the IPs was figured out.

There was inclusion and exclusion of the entrepreneurial activities of these IPs, the Ati in Dumarao, Capiz, Philippines, and the Maduranese in Indonesia.

### Results and Discussions

Table 1 shows the entrepreneurial leadership skills possessed by the Indigenous People (IPs), the Ati, and the Maduranese, their practices in different entrepreneurial activities engaged with (innovation, management, marketing, financial and operation), their business activities involved with, challenges encountered in their business, and the policies and programs implemented in assisting and developing their business venture.

The results revealed that in terms of entrepreneurial leadership skills, the Ati are adept in trading, and selling as some have sari-sari stores, farming, and weaving. The *Maduranese*

|                                                                                   |                 |                                                |                |                   |

|                                                                                   |                 |                                                | Effective Date |                   |
|                                                                                   |                 |                                                | Page           | Page 8 of 27      |

are skilled in trading (chicken satay), selling, leather/krecek processing, cutting hair (hairdresser), as a parking attendant, cooking green bean porridge typical of Madura learned from parents, and culinary (coffee)-through training and education. This implies that the Maduranese had more leadership skills compared to the Ati and it needs to be sustained. However, there are some NGOs that provide training and education to Ati but the progress is stagnating due to some factors. But in other areas in the Philippines, IPs are provided by various agencies with entrepreneurial opportunities. Likewise, Maduranese are risk-takers, they have the propensity for innovativeness and proactive behaviors. Ati and Maduranese have different entrepreneurial skills because according to Gupta et al. (2004) it suggests that building commitment is to forge the capacity of the groups for innovation, risk-taking, and proactiveness which is important for their cultural features. The results are not the same because, in the study of Morales, D., 2020, Ati are tenants on lands owned by Christians, they are wage-earning during September and October, and others gather forest products for sale and personal use. And in the study of Djakfar, M.,(2014) Maduranese who belongs to santri community are motivated to work due to religious factors as part of worship to God in order not to be stigmatized as a lazy and incompetent individual that conformed to Chen, 2007; Covin & Slevin, 2002; Ireland & Hitt, 1999; Kuratko, 2007; Surie & Ashley, 2008 that entrepreneurial leadership is the process of creating an entrepreneurial vision and inspiring a person to enact the vision in high velocity and uncertain environment. Also, Dess et al. (2003) confirmed that entrepreneurial leaders establish conditions conducive to role performance and social exchange.

In terms of practices in different entrepreneurial activities engaged such as innovation, management, marketing, financial, and operation, data revealed that the Ati practiced or used traditional skills. They engaged in underground business organized with tribe heads to facilitate the programs and partnerships with various NGOs, academe, and LGUs. For the Maduranese, they have no training done, training is informal and just learned from parents, other entrepreneurs, and the hometown, experience on previous work, availed before migration, and assistance from other parties (students). That is why proper training and education are a must. For financial aspects, they used loans or personal money. For innovation, they used the traditional way but adopted modern ways. This implies that Ati continues to reflect on its traditional practices even though government and non-governmental agencies introduce innovations related to entrepreneurial activities. The activities of trading and selling are already inculcated into their everyday activities but it is not emphasized organized and legalized. While Maduranese, are open to education and training because most of the participants are engaged in business with innovation, marketing, finance, and operation. According to Tarabishy et al. (2005) for those Ati and Maduranese who work in ambiguous and uncertain environments within a formalized organizational structure, but use the skills and approaches normally expected to identify opportunities, assumed calculated risks, proactively seek out and recognize opportunities, and creatively pursuing innovations, which create value that Ati took for granted. Moreover, Khofifatu Rohmah Adi, Idris, and Fatiya Rosyida (2020) also did qualitative research on the Internalization of Madura Ethnic Entrepreneurship Values. The research used observation, interviews, and documentation. The research found that entrepreneurial values that appear in Maduranese ethnic entrepreneurs are tenacity, confidence in work, high work spirit, and work ethic as reflected in their entrepreneurial behavior.

In terms of business activities involved, the business activities of the Ati were unregistered. They get involved in farming, crafting, and selling native products, and still engaged in traditional medicine like using herbs for healing and others alike. The Maduranese on the other hand has established, operated, and managed businesses. They get involved in trading and selling like chicken satay, leather/krecek processing, cutting hair (hairdresser), as a parking attendant, cooking, and culinary (coffee). This manifests that Ati in Dumarao Capiz

|                                                                                   |                 |                                                |  |                |                   |

has no organized organization registered in the Department of Trade and Industry, Local Government Agencies, and Securities and Exchange Commission. However, Maduranese is organized and their business is registered.

In principle Indigenous enterprise and entrepreneurship in areas such as small to medium size business enterprises (SMEs) are accessible to individuals and groups, it requires limited capital and skills, and appears to easily accommodate values and environmental concerns shared by many Indigenous groups (Hall, 1996). Furthermore, Indigenous entrepreneurship in tourism, for example, is capable of rejuvenating local economies, minimizing the impact of negative tourism through local intervention, and strengthening, supporting, and valuing Indigenous cultural heritage (Brokensha, 1992).

Despite potential benefits, the growth of Indigenous business enterprises is not immune from controversy. In the case of tourism, for example, critics see Indigenous tourism as a 'double-edged sword' that promises prosperity on the one hand while potentially exploiting Indigenous people and their cultural heritage on the other. Commercial contact almost inevitably gives rise to the threat of abuse, the risk that external business interests will dominate local needs and that through commercialization, Indigenous culture will be irreversibly contaminated (Butler and Hinch, 1996), even compromised. The solution lies in Indigenous business enterprises owned and operated by Indigenous entrepreneurs not only in tourism but in other areas.

In terms of challenges encountered/experienced, the still Ati adheres to their behavior. They had no innovation, no drive for entrepreneurship as they lack information about dealing with business, and no access to technology, and lack capital, thus, they have an unorganized business. For the Maduranese, the location of the business is accessible (road accessibility). As new entrants to the business, there were limited customers, the taste of customers (old people and young people), and competitors. The resources of the business, forecasting of the number/volume of products to be produced, inventory level (perishable goods), price fluctuation, Segmentation, Targeting, and Positioning (STP) (market share) were also considered. This depicts that Ati has limited access to innovation since they are still nomads but others already acquired proper education, especially their children. Also, they strongly bond with the traditional and cultural practices they have. On the side of Maduranese, they experienced problems with their location, change in consumer taste, new competitors, and how to handle business operations.

For many Indigenous Peoples and developing societies, the problem concerning entrepreneurial skills and behavior is common. In Africa, for example, low literacy rates (estimated to be 38% in Ethiopia in 2000) and low levels of secondary and tertiary school enrolment, coupled with insufficient government spending on education and training, meaning that would-be African entrepreneurs face serious challenges (Sriram and Mersha, 2006). The poor state of the labor and human capital in most of Sub-Sahara Africa (e.g. Malawi, Mali, Zambia) is a major reason why they are ranked near the bottom by the United Nations Economic Commission for Africa (UNECA) in regards to their Trade Competitive Index (TCI). Consequently, the higher skill levels needed by entrepreneurs are a low priority for African governments because of the basic education and training challenges these governments face. The situation is further compounded by brain drain.

The Philippines, like other ASEAN countries, is dominated by micro small, and medium enterprises (MSMEs) that comprise 99.6% of total firms in the Philippines as of 2009 (Department of Trade and Industry (DTI), 2012. MSMEs play a major role in the economic development of the Philippines, particularly in the rural development and decentralization of industries, creation of employment opportunities, equitable income distribution, use of indigenous resources, creation of backward and forward linkages with existing industries, and development of entrepreneurship in the country and the present pool of Filipino entrepreneurs are driven by previous work experience (37%), exposure to the family business (29%), and

|                                                                                   |                 |                               |  | Page           | Page <b>10</b> of 27 |

education and formal training (17%). Filipinos entering entrepreneurial activity as a means to support the financial needs of the family accounts for 54% of entrepreneurial motivation. Only 37% take advantage of a business opportunity (Velasco, A., 2013). And entrepreneurship in the Philippines is a necessity entrepreneurship. People become entrepreneurs to provide for their families (Velasco, A., 2013). With the above data, there is a scarcity of numbers of successful and organized IP businesses.

Currently, the number of entrepreneurs in Indonesia is still very limited. It can be seen from three facts. First, the population of entrepreneurs as mentioned by David McClelland has not reached the ideal number, which is two percent of the total population. According to research by the Global Entrepreneurship Monitor (GEM) in 2013, it shows that Indonesia has about 1.65 percent of entrepreneurs from a total population of 250 million people. The data also shows that the number of entrepreneurs in Indonesia is way behind compared of three countries in Southeast Asia such as Singapore, Malaysia, and Thailand (Hermanto, B., & Suryanto, S.E., 2017).

The entrepreneurship ecosystem condition according to the Global Entrepreneurship and Development Index 2014, Indonesia was ranked 68 out of 121 countries in the world. Lastly, according to the EY G20 Entrepreneurship Barometer 2013, Indonesia, among G20 countries, is classified in the fourth quartile, which is the group of countries with the lowest ranking in the entrepreneurship ecosystem (Hermanto, B., & Suryanto, S.E., 2017).

In terms of the policies and programs implemented in assisting and developing the IP business ventures, there were Acts and government agencies concerned such as Republic Act 6977 Magna Carta for SME, Republic Act 8371, Department of Trade and Industry, Canada International.gc.ca, NGOs, etc. but the Ati, unlike the Panay Bukidnon, had no initiatives and just dependent of what they have and others would give them so they there was no availment and low engagement on the programs. Ati also provided various training by the Department of Trade and Industry, State Universities, and the Local Government Unit of Dumarao, Capiz. This implies that they need to be trained and oriented on the entrepreneurial aspect for economic development and social advancement. The entrepreneurial environment of the community is not much given priority since they are dependent on easy income so that they can provide for their family. The Madurese did not avail of loan programs from the government but applied for a KUR loan and applied for loans to friends with minimal interest. This implies that Maduranese has deep knowledge and initiative on how to sustain their business. They maximize the available resources to support the business operation. Also, they have engaged in the business they have.

In the Philippines, there is a law that promotes entrepreneurship and financial education among Filipino Youth. A policy that sustained the development of young Filipinos whose aptitude and skill in the field of finance and entrepreneurship through education and specialized programs. If the government will support and provide adequate resources and integrate the system of education and training will lead to the growth of young entrepreneurs nationwide (Republic Act No. 10679). Likewise, the Republic Act No. 6977 also promotes, develops, and assists Small and Medium Scale Enterprises through the creation of a Small and Medium Enterprise Development (SMED) Council, and rationalization of government assistance programs and agencies concerned with the development. Above all, recognizing that small and medium-scale enterprises have the potential for more employment generation and economic growth and therefore can help provide a self-sufficient industrial foundation for the country, it is a policy of the State to promote, support, strengthen and encourage the growth and development of small and medium enterprises in all productive sectors of the economy particularly rural/agri-based enterprises. This is the ideal act for all Filipinos including the Ati, but the problem itself there is limited data on organized and successful Ati entrepreneurs because the program itself did not address inclusivity and sustainability. Hence, it does not focus on the holistic approach to Ati welfare and development.

On the other hand, In Indonesia, the government support for entrepreneurship development is very high. It can be seen from the government's action since 2011 that has launched the entrepreneurship movement nationwide. No fewer than 13 ministries and government agencies have their respective entrepreneurship program with an overall budget that could reach up to 20 trillion IDR. Ministries and agencies had been carrying out their program to help entrepreneurs to increase their competitiveness and overcome business problems. Among those programs are the provision of credit (KUR), enhanced technologies capabilities through the machine restructuration program, improvement of the human resource capacity through training, facilitation, and mentoring of quality assurance systems and food security, and several other things about enhancement of market access (Hermanto, B., & Suryanto, S.E., 2017). However, the implementation of the programs was done for the sake of using the budget. In practice, the programs that were run by each ministry, agency, and office within the provincial and district merely focus on entrepreneurial coaching programs that are relatively easy to implement, such as entrepreneurship training programs or funds stimuli. Whereas the entrepreneurs still cannot thrive because the help they received is not fundamentally required.

**Table 1. Thematic analysis of the Entrepreneurial Leadership and Practices of Indigenous People towards Economic Development and Social Advancement in the Philippine and Indonesian Context.**

| Considerations                                                                | <i>Ati</i>                                                                                                                                                                                                                         | <i>Maduranese</i>                                                                                                                                                                                                                                                                                                                                                                                       |

### The Ati Business Players

The researchers did content analysis and interviews with the head (Elias Valencia) of Ati of Dumarao, Capiz. Presently, the *Ati* resides in Sitio Tag-aw Tumulalod, Dumarao, Capiz, Philippines. Primarily they are engaged in farming, raising animals, and selling their arts and crafts as a source of their livelihood. According to the head of the group, *Ati* is still nomad and their present living condition is affected by their behavior.

Likewise, the *Ati* process of selling their products is to go to the neighboring town and they go to all houses and others are looking for an area near the town market. The challenges they encountered in selling their products buyers get them at low prices. Some of them also experience rejection and even did not given importance because of their situation and race.

Based on the *Ati* experiences they maximize their time to sell the products produced to sustain the needs of the family. But sometimes, they go home without any sale of their goods.

### ***Unnamed Ati***

One of their entrepreneurial activities of *Ati* is to sell backyard orchids and flowers. And based on their experience they sell it at minimum cost without thinking about the added cost like transportation and others.

### **Training provided to *Ati***

According to the head of *Ati* People, some NGOs and public organizations provide training to the community. One of these is the training conducted by Capiz State University on Organic Farming. It is participated by the community. And the head of the community also mentioned that other groups also provide training only but in terms of financial support there is none.

### The Maduranese Business Player

The researchers did informal interviews with IPs: the Ati of Dumarao, Capiz, Philippines; and the Maduranese of Indonesia.

Figure 3 shows Mr. Ilyes and Angger Indra Jaya during the interview. Mr. Ilyes is 53 years old, selling satay, trading for 18 years in Nitripayan, Yogyakarta, Indonesia. There was no training that has ever been followed, relying only on the ability to process satay learned from his hometown. Currently, his business is only selling satay. The challenge faced was the location of the business, which must indeed be located on an alternative road so that many potential customers are passing by, but the location can be said to be that is still very quiet because it is around the rice fields and only a few residents are on the side of the road, so it seems dark. Besides, it is difficult to create a market because it is not an area that is crowded with people trading. The risk he took was that he opened a business in a place where not many people opened a business, so the place was still relatively quiet, but this was also one of the opportunities he saw because there were no satay sellers on this alternative road and the road was true quite a lot to pass people because it is an alternative route. An innovation that he has not yet done, but is currently working on is registering the business on the online platform so that it can cover a wider market.

*Figure 3. A photo of Mr. Ilyes with Angger Indra Jaya during the interview.*

Mr. Wahyu, as shown in Figure 4, is 24 years old. He has been trading in angkringan business for 1 year. The business is located in Patangpuluhan, Indonesia. The training that had been carried out was informal. He previously worked in the business of making leather bags and wallets, after he started to open his own business in the same field, but because the market was difficult to find, finally switched to trading angkringan. His current business activities are trading angkringan and only occasionally receiving orders to make leather bags or wallets, but his main business focuses more on the angkringan business. The challenge he faced was that he had to be able to make dishes with the appropriate taste for the people of Jogja, besides that the target consumer was limited to residents because the business location was in a residential area not on the side of the main road. By selling angkringan, he considered it a big risk, seeing angkringan business is not a new thing in the area. However, this is also an opportunity that can be exploited, because he has a sufficient yard and the ability to cook as well as the support of several residents to open the business. The innovations that have been made include renovating the business premises and providing orders in bulk.

*Figure 4. A photo of Mr. Wahyu with Angger Indra Jaya*

Mr. Rudi (see Figure 5) is 40 years old. He engaged in Madura haircut in Bugisan, Indonesia for 7 years. Before he migrated to Jogja, he learned to cut hair from his colleague in Madura, after that in Yogyakarta, he helped his friend for a year until finally opened his own business with his capital. The current business activity is limited only to cutting hair. The challenge faced was the number of new competitors that are mushrooming like the barbershop business actors, so that consumers, who came from all walks of life are currently limited to parents (fathers), for young people it is very rare. The Maduranese haircut, which was originally one of the most popular haircutters in Yogyakarta, is one of the reasons why he ventured to open a business. However, with the changing times with the same number of business actors with more modern tools and atmosphere, currently they are experiencing a significant decrease in income and made loans to enlarge or renovate the business premises. He was not quite sure, however, because of the mindset of people that at this time they would prefer to do haircuts in "not" Madura haircuts, especially for young children.

*Figure 5. Mr. Rudi with Angger Indra Jaya*

Mr. Chaerul, as shown in Figure 6, is 31 years old. He has been in “krecek” processing in Patangpuluhan, Indonesia for 3 years. He started working with someone who had a krecek-making business. His current business activities are processing cowhide into krecek then selling it to several customers and offering its products in the market. He was challenged to compete with business actors in the same field because many business actors were able to produce krecek with a large enough quantity scale. And he must be able to find his market. In a market that is difficult to form due to competition with larger producers, he must be able to press prices again to be able to compete with his competitors. Making krecek is a pretty brave decision because not many people do this business. There were no innovations made to date because his current focus is to able to maintain quality and determine prices that can attract the market but still generate profits for him.

*Figure 6. Mr. Chaerul with Angger Indra Jaya*

Mr. Rahmat, shown in Figure 7, is 50 years old. He has been in parkir (parking) business in Shopping Toko Buku in Indonesia for 5 years. Initially, he worked as a hawker selling cigarettes in the Malioboro area, but due to the unstable and relatively small profits, he finally decided to change his profession to become a parking attendant. He was not at the edge of people who want to take risks, even though a hawker is a quite profitable business opportunity seeing Malionoro is a very busy tourist spot. He never attended the training. The challenges he faced were not felt. It was just that at the beginning he had to be able to get land first because the parking attendants were usually taken by the natives. However, because he had been selling in the Malioboro area for a long time, it made it easier for him to get a parking lot.

*Figure 7. Mr. Rahmat with Angger Indra Jaya*

|                                                                                   |                 |                                                |                |                   |

|                                                                                   | Document Title: | <b>COMPLETED RESEARCH</b>                      | Revision No.   | <b>00</b>         |
|                                                                                   |                 |                                                | Effective Date |                   |
|                                                                                   |                 |                                                | Page           | Page 20 of 27     |

Mr. Udin, in Figure 8, is 35 years old. He has been in Warung Burjo Madura business, in Sorosutan, Umbulharjo, Indonesia for 3 years. He can cook green bean porridge typical of Madura. The training that he attended was an informal one, that is, he learned from his parents. Meanwhile, for trading, he learned from a fellow seller of Madura green bean porridge. He is currently engaged in selling Madura green bean porridge. The challenge that he currently feels is not about competitors, but how he can estimate the stock he has to cook every day so that they do not leave any merchandise because the quality of green bean porridge is one of their focuses. The risk faced at this time is that the business location is not yet strategic, they open a business using tents in the village area. However, this is also one of the business opportunities because there are not many competitors in the region. To start a business, he made a loan from the bank, and until now he is still paying in installments to the bank.

*Figure 8. Mr. Udin with Angger Indra Jaya*

Mr. Kholil, as shown in Figure 9, is 54 years old. He has been a grocery stall owner in Selokan Mataram, Indonesia for 10 years. He started by selling poultry (pigeons) at Ngasem Market, then after, he became a parking attendant at Ngasem Market. In 2011, he decided to open a grocery stall located at his house and is still a parking attendant at the market. The challenge faced was that, when selling poultry, he had a flexible time, now when selling groceries, he must be able to adjust what items are needed by the surrounding community and as much as possible not let any merchandise expire. He did not propose a program that could help the business he is doing now. The way he calculated the risks he must face is how he must be able to minimize the expired goods in his shop. He is also someone who dares to take risks by opening a grocery shop even though there are not many grocery stalls in his area. He was not afraid also of items that might expire if they do not run out quickly. The way to recognize this opportunity is due to the restlessness of the surrounding community (neighbors) who complain about the lack of grocery stalls in the area of Mr. Kholil's house. The way to take advantage of the opportunities that exist is by opening a grocery store because there are only a few who open this kind of business. His innovation was to increase his merchandise. He did not participate in any training but learned from his experience from the first time selling poultry until now.

*Figure 9. Mr. Kholil with Angger Indra Jaya*

Mr. Hafid, as shown in Figure 10, is 44 years old. He has been in selling and trading chicken satay in Seturan, Indonesia for 10 years. He had never participated in any formal training, but had been assisted by practical students on how to market chicken satay through a food delivery service. The challenge faced was the number of chicken satay rivals on the market. In terms of food, there was an unstable (fluctuating) price of meat and this made the profits unstable too (varies). He applied for a KUR loan. The advantage he got was that he had to go around selling his satay. Now he can rent his kiosk and so far has always been on time in paying his loans. He shared his initial experience selling satay by joining a brother who traded chicken satay for 10 years and only after 10 years did Mr. Hafid open his satay shop. The way he calculated the risks he is taking is to try as much as possible not to take much profit from the results of the chicken satay he sells. What he did was "the important thing is that customers keep coming". He has been taking risks since he decided to migrate to Yogyakarta City. He is looking for a location where there are not many satay sellers. An innovation made was selling his chicken satay using online media (food delivery service). He wants to maintain the quality of his chicken satay as well as possible.

*Figure 10. Mr. Hafid MD with Angger Indra Jaya*

Mr. Mahmud, as shown in Figure 11, is 36 years old. He has been in Arrasah coffee shop business in Patangpuluhan, Indonesia for only 6 months. After seven years of pursuing the culinary world, especially coffee, he has now the courage to open his coffee shop. The challenge faced was a market share that has not been formed and how to create the right market share because, in the Patangpuluhan environment, there are no many people "hanging out" and there is no university so no students are attending. He did not apply for a loan from the government but applied for a nominal but sufficient loan from his friend so that he would not have trouble repaying it. At first, he came to Yogyakarta City in 2013 for just a vacation, but due to the comfortable atmosphere of the city of Yogyakarta, he did not want to go home, so his friend invited him to work at the "Mato" coffee shop. After working at the "Mato" coffee shop, Mr. Mahmud worked at the "Basa-Basi" coffee shop as the head of the kitchen. After seven years, Mr. Mahmud took a risk and ventured to open his coffee shop. The calculation taken before opening his "Arrasah" coffee shop was whether or not many people are passing by in the area. He wants innovation for his coffee shop, but currently, it is still difficult due to limited space. The innovation made was live music, but due to the pandemic, live music was abolished first.

*Figure 11. Mr. Mahmud with Angger Indra Jaya*

The Maduranese of Indonesia has an entrepreneurial mindset given that some of them are very responsive to their society. They do not see poverty as a hindrance to growth and development. They made ways to sustain their standard of living and even uplift it if there is an opportunity.

**(13) Conclusions and Recommendations** (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

After addressing the research questions on the entrepreneurial leadership and practices of *Ati* and Maduranese towards development and social advancement in the Philippines and Indonesia these indigenous people have various challenges experienced when it comes to entrepreneurship and it is all related to their culture and tradition.

In the *Ati* community, entrepreneurial leadership is poor. The study covered various aspects of the entrepreneurial process; these IP group is taken for granted. The support from the government is not sustained, no financial support is provided to augment the started business, not organized and legalized, as well as no available community-run Indigenous business enterprises as well as individually-run (privately owned and operated) enterprises. Likewise, the activities related to entrepreneurship are based on their traditional practices. Others are low-wage earners and limited access to proper education. The entrepreneurial activities of *Ati* are just for the needs of the family.

In the Maduranese community, this IP group in Indonesia is trained and innovative and practices their acquired skills by organizing and managing their owned business. The drive of the Maduranese to pursue their business is just because of their belief and culture that they need to work hard to give honor to their gods. Also, the Indonesian government provides various programs, especially for financial support but the Maduranese opt to use their resources and even look for a low-interest loan for their relatives and friends.

And both countries passed policies related to entrepreneurship but the implementation is not sustained and monitored. The projects and programs are only implemented for the sake

|                                                                                   |                 |                                                |                |                   |
|-----------------------------------------------------------------------------------|-----------------|------------------------------------------------|----------------|-------------------|
|  | Document Type:  | <b>DOCUMENTED INFORMATION</b><br>ISO 9001:2015 | Document Code  | <b>RES- CR-01</b> |
|                                                                                   | Document Title: | <b>COMPLETED RESEARCH</b>                      | Revision No.   | <b>00</b>         |
|                                                                                   |                 |                                                | Effective Date |                   |
|                                                                                   |                 |                                                | Page           | Page 24 of 27     |

of budget utilization.

Based on the findings and conclusions, the researchers may recommend to the Philippine and Indonesian Governments and to their local executives to prioritize inclusivity in the development of the IP groups in the community, especially to *Ati* and *Maduranese*. The development and social advancement of these IP groups may be given priority. The entrepreneurial leadership may be contextualized based on their tradition and culture. First, the entrepreneurship leadership skills of *Ati* and *Maduranese* may be developed by providing contextualized culture-based training based on their capabilities and resources. Second, in their entrepreneurial activities related to innovation, management, marketing, financial, and operation the *Ati* and *Maduranese* may be provided easy access to sustainable programs and projects that will enhance their innovation and creativity, provide proper education on management, marketing and operation to prepare these groups to address the challenges of the business and achieve its competitiveness and sustainability. In terms of financial support, the government may provide low-interest loans and financial management and literacy program for sound financial decisions for the organized business.

Third, on the implemented policies and programs, the government and local government units of each country may look into a micro perspective on the actual problem and environment of *Ati* and *Maduranese*. It may focus on the risk-based and problem-based approach before developing any policies and sustainable programs provided to the IP community. Also, they may consider the culture, beliefs, and traditions of the community before implementing any programs.

Fourth, access to proper education on entrepreneurship for the *Ati* and *Maduranese*. This approach may be highlighted to prepare these groups for any entrepreneurial activities.

Lastly, the insights on the development and social advancement of *Ati* and *Maduranese* are the equal provision of culture-based training and programs focused on innovation and creativity, marketing and management; financial management with a provision of financial support, creation of economically and sustainable IP business enterprises. For social advancement, the government may focus on education, entrepreneurship; IP protection of welfare and rights; and assistance to IP business enterprises to achieve profitability and sustainability.

**(14) Output** (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

The output of this research is to come up a sustainable entrepreneurial advancement both indigenous groups. For the Philippines and Indonesia, it will focus on the implementation of the Project Connect: The Mobile School for Management and Governance. The Mobile School of Management and Governance will link to the stakeholders by providing efficient and effective delivery of services and consultancy by answering their needs through its clear directions. Hence, the framework of the project directs to its stakeholders and beneficiaries, also it will partner to various agencies both public and private. Likewise, the mobile school will frame an inclusive, holistic and sustainable approaches and strategies. Above all, the mobile school will strive to achieve glocalization, timely innovation and development.

THE MOBILE SCHOOL OF MANAGEMENT AND GOVERNANCE DIRECTIONS
