(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

This study examined the degree of role authenticity among 120 women, leaders, and members of the Capiz Alliance Community Center, a Christian religious organization, in relation to transformational leadership behaviors and role authenticity. Each of the respondents held a position of leadership at the community center. The validity of four leadership positions that are known to be connected to transformational actions was examined in this study. Inspirational motivation demonstrates idealistic influence, inspiring motivation, cognitive stimulation, personal concern for women and their position. Authenticity, such as that of a visionary, good role model, change advocate, coach, and mentor, also serves as an example of transformative leadership. The results showed that, depending on their role authenticity, leaders either exhibit transformational leadership characteristics to a high or moderate degree.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

Keywords: *Capiz Alliance Community Center, Faith Community, Role authenticity, Transformational leadership, Empowerment and Engagement*

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

In today's world, both public and private organizations face numerous challenges. One of these qualities is leadership, which poses a global threat to the organization's survival. Due to an upsurge in clergy and other church authorities abusing church members, religious community leaders are under investigation due to rising instances (Sosik, 2006). Corruption, illicit connections, unresolved grievances between leaders and members, conflict among members, and a slew of other issues are among the many reasons why the religious organization's legitimacy is being called into question. According to the Bible, the church is made up of individuals whose actions have varying effects on the institution. Jeremiah 51:46 says that even the leaders of nations will battle against one another. Some desire to be served, but they have little interest in helping other people. The members are obligated to put the word of God into effect and to interpret it. Yet, it will be different among you, as it is said in Matthew 20:26. Anyone among you who aspires to have leadership must first be willing to serve as your servant. In Hebrew chapter 13 verse 17, the following instruction is given: "Obey your spiritual leaders and obey what they say." Their job is to keep an eye out for your spiritual well-being, and they are accountable to God. Please find a way to make today an occasion for celebration rather than lamenting for them. It would most definitely not be to your advantage. Yet, there is no such thing. The modern church is struggling with a problem that has an impact on relationships, leadership, and even the members' ability to put their faith to the test. Authentic leadership has received a growing amount of attention from both leading scholars and practitioners in recent years (Sosik, 2006), in direct proportion to the growing number of public demands for ethical behavior and openness in religious groups. Authentic transformational leadership is an example of a genuine kind of leadership that is particularly applicable to religious societies (Bass & Steidlmeir, 1999). According to Callahans' (1997) research on the leaders of religious communities, transformational leadership is the model that most effectively supports the competencies necessary for successful church leadership. In addition, the seminary education of ministers and laypeople at several faith-based colleges has begun to incorporate

	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 3 of 15

parts of transformational leadership in recent years (Bethel University, 2010). Transformational leaders shape their followers' morality and leadership skills in an ethical and growth-oriented manner. Being a visionary, role model, change agent, coach or mentor is difficult. Leaders cannot always be themselves when juggling multiple responsibilities (Bass, 2008; Sosik, 2006; Sosik & Cameron).

Faith community leaders at the Capiz Alliance Community Center wonder if women's roles are true expressions of themselves and if they can behave authentically. The Capiz Alliance Community Center is affiliated with the Christian and Missionary Alliance Churches of the Philippines, which was founded in 1947. (CAMACOP). In 1902, the United States Christian and Missionary Alliance arrived in the Philippines. Zamboanga-Sulu Archipelago and Cotabato-Davao on Mindanao were allotted to C&MA. Tetuan in Zamboanga City became the first Alliance Church in 1902. Mindanao's first Protestant church, which is mostly Muslim, is still in operation. C&MA Missionaries' small churches became national churches after WWII. The first thirteen local churches established the Christian and Missionary Alliance Churches of the Philippines in 1947. CAMACOP became a legitimate organization after registering with the SEC in 1949.

The Capiz Alliance Community Center was established not long after the catastrophic effects of Super Typhoon Yolanda were felt in the region. A hub in which one's trust in the one and only Saviour, Healer, Sanctifier, and Coming King, Jesus Christ, serves as the foundation for one's hope and faith. The mission of the center is to work toward the transformation of the community for the glory of God. At the moment, a total of one hundred people are associated with the center. This figure accounts for males, females, young adults, and even younger children. The center continues to expand by the grace of God, with the assistance and direction of the Almighty, as well as the fervor that comes from the people who are a part of it. This study examines women's transformational leadership characteristics and role authenticity. This technique measures role authenticity and transformative leadership among community center women, hence, the researcher also learns how role authenticity affects transformative leaders.

Statement of the Problem

The relationship between role authenticity and transformational leadership behavior of women at the Capiz Alliance Community Center was investigated in this study. 1. Determine the level of women role authenticity as to leaders' visions, role models, change champions, coaches, and mentors? 2. Do women have idealistic influence, inspiring motivation, cognitive stimulation, and individual concern as transformational leaders? 3. Does the authenticity of women's roles influence the behavior of transformational leaders? 4. What effect does authentic and transformative leadership have on women?

The hypothesis of the study

HO1: There is no substantial correlation between a woman's role authenticity and her ability to exercise transformative leadership in her organization.

The theoretical framework of the study

This study used genuine leadership development and transformational theories (Gardner et al., 2005; Bass & Steidlmeir, 1999). Visionaries, role models, change advocates, coaches, and mentors are seen as less real than original versus inauthentic (Gardner et al., 2005). Role

	Document Type:	DOCUMENTED INFORMATION		Document Code	RES- CR-01
		ISO 9001:2015		Revision No.	00
	Document Title:	COMPLETED RESEARCH		Effective Date	
				Page	Page 4 of 15

authenticity may be ongoing. Idealistic influence, inspiring motivation, cognitive stimulation, and personalized concern are all characteristics of transformational leadership (Bass, 2008).

The conceptual framework of the study

The framework illustrated the link between transformative leadership behavior and role authenticity.

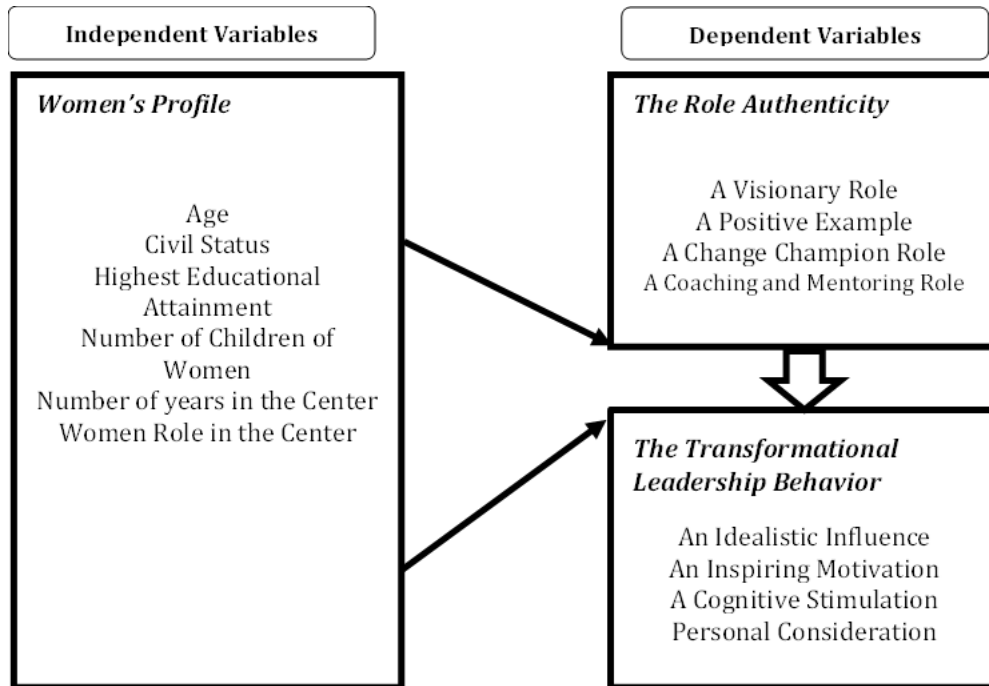

Figure 1: Displaying the study's structure.

(11) Materials and Methods or Methodology (This includes the materials, methods,duration & location of the study.

Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

This is a quantitative research method, utilizing a research approach that is both descriptive and correlational. The respondents in this study were 120 different women who were members and volunteers of the Capiz Alliance Community Center. The researcher asked questions about transformational leadership behavior using an adapted version of Bass's (2008) Multifactor Leadership Questionnaire (MLQ) Form 6. An expert panel composed of directors, pastors, and deacons are assembled to review the attestation of role authenticity that the researcher had created. After having in-depth discussions with the respondents about the instrument's contents, the researcher handed out the translated Hiligaynon versions of the instrument. The respondents, average age is 42; eighty percent of the population is married; forty percent is a high school student; the typical family size is six to ten children; the average time spent at the center is four years and; sixty percent of women are ministry core leaders and volunteers.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

Table 1 shows information about how well the women of the Capiz Alliance Community Center played their roles. This information is broken down into the following categories: visionary, a good role model, a change agent, a coach, and a mentor. There are three questions for each function, and the answers can be anything from "often" to "never." The findings of the research displayed an overall mean score of 3.14, which considered "good" level of quality. It gives the impression that the self-concept and conduct of the women who go to the Capiz Alliance Community Center, in terms of their experiences, ideas, feelings, preferences, and beliefs, are congruent with the authenticity of the roles that they play. According to Kernis (2002), being authentic results in having a heightened self-awareness as well as being real, truthful, steady, and persistent. Genuine leaders have high self-awareness, which include understanding its moral compass as well as a high level of balanced information processing and attributions, according to Gardner et al (2005) theory. So, leaders who have a higher level of role authenticity have a greater awareness of themselves and can develop a profound commitment to values, identities, and goals that they have internalized (Sheldon et al., 1997). However, leaders who lack a balanced capacity for information processing should not hold positions of authority within the church if they find it difficult to admit their flaws, such is a lack of skill, bad attributes, or unpleasant feelings against church members and followers (Sosik, J., and Weichun, Z., 2011).

Table 1: The Level of role authenticity of women at Capiz Alliance Community Center.

Role Authenticity	S.D.	Mean	Verbal Interpretation
Visionary	0.48696	3.0500	High
Positive Role Model	0.59702	3.1500	High
Champion of Change	0.39699	3.1833	High
Coach and Mentor	0.42543	3.1833	High
Grand Mean	0.4766	3.1416	High

Level of Transformational Leadership Behavior of Women

The average amount of transformational leadership behavior shown by women was 3.19, which is considered "high." This information is presented in Table 2. It gives the impression that the conduct of women in transformational leadership connects to their function as church leaders and members based on the leadership styles adopted by their pastors. Stronger transformational leaders have shown the capacity to lead their followers to higher levels of member satisfaction. The relationship that exists between leaders and followers as well as the development of organizations are both heavily stressed by Bass (1985). Leaders who transform organizations' environments convey people's future vision (Bass, 1998; Burns, 1978; Judge and Bono, 2000; Lowe et al., 1996)(Lewis, 1996; Abbott, 1999; Wofford, 1999) and can contribute to the development of an effective leadership model for the leaders and the next generation of the local church. If the church practices a high level of transformational leadership, it is effective and biblically sound leadership (Lewis, 1996; Abbott, 1999; Wofford, 1999), and it can contribute to the development of an effective leadership model (Son, 2003).

Individual Consideration	0.76777	3.2000	High
Grand Mean	0.6700	3.1916	High

The Relationship Existing Between Role Authenticity and Transformational Leadership Behavior

Table 3 shows the link between being honest at work and showing transformational leadership behaviors. Idealized Influence. When it comes to being visionary, the statistical data showed a Gamma value of.740, which corresponds to a significant value of.002. The conclusion indicates that there is a highly relevant but weak association between positive role models, champions of change, and coaching and mentoring positions; hence, the null hypothesis (Ho1) was not supported. This shows that women directly developed into visionaries while also exhibiting an idealized influence behavior in which they behave charismatically and morally while imparting revelations, prognoses, and expectations to their fellow churchgoers. A leader's personality, her character traits, the environment or role she is in, or some combination of these factors may all play a role in how much of any of these behaviors she displays. Executives who work in technology or problem-solving, for example, are more likely to value showcasing their intellectual prowess (Bass, 2008). However, because caring for others, imparting knowledge, and playing a constructive role are highly valued in faith communities, those in positions of leadership may frequently exhibit idealized influence and personal consideration (Yount, 2008). Being a good role model and exhibiting behaviors that are idealized representations of influence may be of great significance in the setting of leadership in a religious community; however, this may vary from religion to religion. An Evangelical Christian congregation leader, for example, might be more of a community role model than a Catholic priest. Jesus Christ taught by serving as an example for others to imitate and by "simply living what he preached," according to Yount (2008). For the Christian faith community to be a champion of change, its leaders must be open to novel ideas and risk-taking, creative in their teaching, and able to plan for and facilitate learning experiences (Schaefer, 2003). (Yount, 2008). So, we thought change-advocates would provide intellectual stimulation. Because these leaders must face the assumptions that influence their followers' behavior (Matthew 7:1-3), build a clear strategy for effecting good life changes (2 Timothy 2:15), and apply cutting-edge Bible study methods like observation, reflection, and interpretation.

Inspiring Motivation. The results showed that the relationship between emotional motivation, proactive role, coach and mentor roles, and the Gamma value was between.762 and.600, with a significant value between.000 and.015. According to research, inspirational careers like visionary, coach, and mentor have a strong correlation with inspirational motivation. As a result, no effect hypothesis (Ho1) was found to be false. It suggests that women have the ability to evangelize and preach to both believers and atheists. The results of recent research and the self-concordance hypothesis put forth by Sheldon (2002) suggest that roles that give community leaders a sense of role authenticity may encourage them to act in ways that are representative of the characteristics of a particular function. To be more precise, evangelism, dynamism, preaching, and consensus-building comprise the proactive roles of Christian faith community leaders (Schaefer, 2003). We anticipated that the motivational display would be connected to these specific responsibilities. This is due to the fact that they must enthusiastically and fervently cast and express the notion of "making disciples of all countries" (Matthew 28:19), "preaching the word," and growing the religious body in order to motivate such leaders (1 Corinthians 12:12-13).

Intellectual Stimulation. The results of the statistical study revealed a gamma value of.676 and a significant value of.003 between intellectual stimulation and the role of coach and mentor. According to research, a woman's need for intellectual stimulation and the presence of a coach or mentor in her life are strongly related. It implies that women examine their vices and personal failings, by repenting and reforming, and improving their lives

			Effective Date	
			Page	Page 7 of 15

through adopting new, religiously-based ways. Women in the church also have a sense of self-identity that is focused on encouraging other Christians to become the best versions of themselves possible.

Individual Consideration. The results of the statistical study show that there is no connection between the authenticity of women in church leadership roles and their transformational leadership behavior. On the other side, coaching and mentoring Christian leaders involves a solid experience in pastoral care and healing, community service, and empowering laypeople like deacons and church members (Schaefer, 2003). Having realized this task would involve evaluating each individual. These leaders need spiritual and material resources to do the church's mission, as well as counseling through "teaching" them (Matthew 28:29; 2 Timothy 4:2). Because such leaders require customized coaching and mentoring, not just "taught" (Schaefer, 2003).

The Influence of Role Authenticity and Transformational Leadership Behavior of Women's

Multicollinearity occurs when many predictor variables are correlated. The multicollinearity method was utilized since the resolve of the study was to discover the influence that authenticity and transformational leadership behavior play in influencing women. On the other hand, if two or more predictors are correlated, then it is inherently difficult to tease apart their effects. The multicollinearity overall regression model is (Gamma, R, F-

	Document Type:	DOCUMENTED INFORMATION	
		ISO 9001:2015	
	Document Title:	COMPLETED RESEARCH	
		Document Code	RES- CR-01
		Revision No.	00
		Effective Date	
		Page	Page 8 of 15

value, and the significant value, or p-value); on the other hand, the multicollinearity overall regression model is (R-values). As a result, the effect of multicollinearity is to decrease the effective sample size and, as a consequence of this, the statistical power for estimates of individual predictors. β , also known as standardized slope, is a parameter that is used to estimate unbiasedness, but when multicollinearity is present, it is estimated at a lower level of accuracy (Ho, 2006).

The results of a multicollinearity analysis on the influence of role authenticity and transformational leadership behaviors of women at the Capiz Alliance Community Center are presented in Table 4. The table shows both the significant value and the r-value. According to the data on authenticity and transformational leadership behavior, the change champion role, proactive role, coach and mentor role, idealized influence, and inspirational motivation were all marginally significant at the p.001 level. It indicates the potency of numerous different variables. This result is consistent with self-constructs and social-contextual perspectives (Hogg, 2003) as well as personality (Sheldon et al., 1997), which hold that people should feel at ease in social roles that accurately reflect their character and personality.

Sheldon et al. (1997) and Hogg (2003) contributed. Gardner et al. (2005) and Sosik (2006) examined authentic transformational leadership behaviors and identity and interpersonal accounts. Examining the leaders' genuine behavior choices did this. The leadership behavior of Christian faith community leaders is associated with role authenticity across positions, supporting a theoretical explanation of genuine transformational leadership. Positive role models for women come from proactive people who champion change, which is moderately significant (p .001). It demonstrates that the impact's force was not particularly strong. According to Kernis, authentic behavior leads to genuineness, truthfulness, stability, consistency, and a greater sense of self-awareness (2002). The average r-value for the visionary role and positive role model was .676 and that for the role of champion of change was .643. These values were marginally significant at .001 and .002, respectively. It shows that the impact's strength is not particularly high. The average r-value for the champion of change role and intellectual stimulation was .448 and it was moderately significant at .048. It denotes a moderate degree of influence. Thus, transformational leaders may intellectually stimulate. Community leaders must "put on the new self, which is being renewed in knowledge in the image of its Creator" (Colossians 3:10) and "the mind of Christ" (Yount 2008)(1 Corinthians 2:16).

Proactive role models who champion change are moderately essential to supplying women with positive role models (p.001), hence, the impact is weak. Kernis proposed that genuineness, truthfulness, stability, consistency, and self-awareness are all results of authentic behavior (2002). The average r-value for the visionary and positive role model was .676 and that for the role of champion of change was .643. These values were marginally significant at .001 and .002, respectively. It shows that the impact's strength is not particularly high. The roles of visionary, coach, and mentor, as well as motivating inspiration, have a moderate amount of significance when it comes to idealized influence because of their R-values. It suggests that the selected variables have some degree of interaction with one another. The roles of visionary, coach, and mentor, along with intellectual stimulation and individual concern, all have a modest level of significance when it comes to motivating others because of their R-values. This suggests a moderate relationship between the variables of transformational leadership behavior and role authenticity.

According to Tajfel's (1972) social identity theory, an individual's concept is influenced by their knowledge of specific social groups to which they belong, as well as the emotion and value relevance of group members amassing life experiences in various roles.

Therefore, a person's social identity is made up of the groups they are a part of, whereas a person's identity is made up of the things that make them distinctive. Intellectual stimulation, acting as a change agent, serving as a coach or mentor, and being inspired all have a moderate level of importance due to their R-values. This suggests a moderate relationship between the variables of transformational leadership behavior and role authenticity. But because the r-value is so high (.917), the individual factor under consideration is very important. This demonstrates the beneficial interaction between intellectual stimulation and specific reference. Additionally, it was discovered that religious leaders were the least likely to engage in intellectual stimulation in any role, with the exception of coaching and mentoring. The results are in direct opposition to those found by Powell (2009), who claimed that church leaders did not see it as their primary duty to challenge the followers' beliefs or to make significant structural or theological changes within the congregation.

These results go against leadership research reviews (Antonakis et al., 2003; Bass, 2008) that stress the importance of context in determining the frequency of transformational leadership behavior.

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

Current research provides intriguing insights into the authenticity and transformational leadership styles of women in religious communities like the Capiz Alliance Community Center. If good role models are valued, role authenticity can be used to identify pastors, screen church leaders, and choose new faith community leaders. In

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01

			Effective Date	
			Page	Page 10 of 15

denominations where church authority chooses pastors, this inference may not apply. The diocese assigns Catholic priests to each church. National headquarters oversaw the Capiz Alliance Community Center, but local church leadership made decisions. Role authenticity measures can be used in transformational leadership roles by trainers and consultants in leadership development who work with ministers and pastors on self-awareness. These are actions taken by transformational leaders. Transformational community leaders can be true to themselves and others by practicing self-awareness and identity. Self-reflection can help faith leaders be authentic. Understanding the responsibilities, talents, and behaviors a person values might help them determine if they are a suitable match for faith community leadership. Transformational leadership experts want to study how environments affect leaders and followers because leadership studies have been criticized for ignoring these factors.

This study found that transformational leadership roles, whether high or moderate, are dynamic and may depend on the leader's environment. Leadership behavior may vary depending on role authenticity. The results also suggest that authenticity analysis may reveal information about more than just a person's authenticity. Transformational leaders may need to find their true role and act accordingly. Transformational leaders must act authentically.

The researcher advises Capiz Alliance Community Center church leaders to understand members' personalities and roles. They can evaluate members' leadership potential in any situation. Current leaders may be able to help younger members develop sincere relationships with God and communicate with the Holy Spirit, proving their sincerity. Transformational leadership behavior can be supported by self-awareness, inspiring vision that reflects their true purpose and beliefs, their actual idealized impact, and emotional motivation toward others.

And lastly, in order to empower and engage others outside the center, the women leaders and volunteers may act a transformational leader and show authenticity in every motives and actions done to the community.

(14) Output (Indicate the specific products, processes, or services which the project has produced; quantify when possible.)

Consultancy services and capability enhancement activities. Also, there is a series of project management activities provided to the center.

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

- Consultancy
- Capability and Project Management Activities
- Project HELP
- Project RAISE

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period)

Sample Economic Analysis

REVENUE

Sales

DIRECT COST

Direct Charges- Wages & Labor

Direct Charges - Materials & Supplies

Direct Charges - Depreciation

Direct Charges - Repair/Maintenance & Fuel/Oil
