(9A) Abstract

This study aimed to identify coaching styles, behaviors, and motivational factors influencing athlete performance. Specifically, it investigated the coaching styles and behaviors exhibited by coaches and the motivational factors they employed to enhance athlete performance. A descriptive research design was utilized to collect quantitative data from 138 athletes in public secondary schools in Capiz, Philippines, who participated in sports competitions ranging from local to national levels. Athletes were selected through convenient sampling, and data were gathered using a researcher-made questionnaire. Findings revealed a predominance of the democratic coaching style and a relatively low incidence of the authoritarian style, suggesting a general tendency toward creating supportive and participatory environments for athletes. Coaches emphasized competitive strategies, demonstrating a commitment to thorough preparation for competitions. Additionally, they prioritized positive coach-athlete relationships, avoiding harmful behaviors such as shouting or intimidation. Based on these findings, it is recommended that coaches focus on goal-setting, technical expertise, interpersonal skills, personal rapport, mental readiness, and competitive strategies. Positive coaching approaches are encouraged over negative ones to foster athlete self-esteem. Athletic associations are advised to provide coaching orientation, conferences, seminars, and workshops to enhance coach development. Organizing annual sporting events can further support professional growth and expertise among coaches.

(9B) Keywords

coaching styles, coaching behaviors, motivational factors, athlete performance, democratic coaching, competitive strategies

(10) Introduction

Coaching, a vital part of human development and performance enhancement, has received interest in sports, business, and education. Understanding coach styles and behaviors is essential to optimizing coaching interventions and improving individual and team outcomes. Per Moen, Hoigaard, and Peters (2014) state that coaching is “rapidly evolving, diverse, and often complex,” requiring a deeper understanding of coaching styles and behaviors for effective practice and advice. Coaches use several methods to inspire, advise, and encourage athletes. These styles and behaviors are crucial to understanding how coaches connect with players, customize their methods to individual requirements, and influence coaching performance. Grant (2019) states that teaching approaches vary based on personal values, beliefs, and situational needs. Customizing coaching tactics and maximizing coach transformation requires understanding these styles and behaviors.

An in-depth understanding of coaching styles and behaviors allows for a more targeted and effective coaching approach that addresses each individual or team's needs and goals. Coaches can improve their guidance and assistance by understanding different coaching styles (Hyun-Duck and Cruz, 2016). A detailed investigation of coaching styles and behaviors, their confluence, and their ramifications across varied coaching situations helps bridge these gaps. Given these gaps and the increased interest in coaching as a development tool, this study aims to extensively understand coaching styles and behaviors and create a holistic framework that not just recognizes and characterizes them. But also explains their background and potential impact on teaching. This study was supposed to advance coaching education, practice, and meaningful outcomes for coaches and athletes.

The main goal of this study was to identify the coaching styles, coaching behaviors, and motivational factors that coaches utilized to affect the performance of athletes.

Specifically, the research questions that guided this paper are as follows:

1. What are the coaching styles and coaching behaviors exhibited by the coaches?
2. What are the motivational factors utilized by coaches to enhance athletes' performance?

(11) Materials and Methods or Methodology

This study used descriptive research design employing quantitative approach and method in collecting the data on the coaching styles and behaviors utilized by the coaches and the motivational factors that the coaches used to impact the athletes' performance. 138 athletes from Public Secondary Schools in the division of Capiz who competed in sports from local (Unit Meet) to national (Palarong Pambansa), were the study's respondents. The athletes were chosen by convenient sampling. The researcher-made questionnaire was used to collect the data.

			Page	Page 3 of 7

The first part of the questionnaire was the Athlete's Profile .Second part, survey on the coaching styles and coaching behaviors, and third part is the Motivational factors of coaches. To ensure the reliability of the pilot questionnaire, thirty (30) students who were not involved in the study completed it. The questionnaire was deemed reliable based on its reliability coefficient result, which showed a computed alpha of 0.959.

All retrieved questionnaires were protected and classified numerically to maintain confidentiality in accordance with study ethics standards. After the completed surveys were retrieved, the information was coded, totaled, and analyzed. frequency count, percentage analysis and mean, were employed.

(12) Results and Discussions

Coaching Styles and Coaching Behaviors exhibited by Coaches

Findings revealed that coaches "Almost Always" employed the democratic coaching method, which had the highest mean. The results suggest that among the three (3) coaching philosophies, coaches primarily used the democratic style, in which they act more as facilitators who support player development and involved the athletes in decision-making and goal-setting rather than dictating them. According to statistics on the coaches' coaching behaviors, competitive strategies had the greatest mean among the seven (7) behaviors, which coaches "Almost Always" highlighted, and poor personal rapport had the lowest mean, which coaches "Sometimes" emphasized.

The results imply that coaches mostly use a democratic coaching approach, place emphasis on competitive techniques, and typically foster positive personal relationships with their players. These activities have the potential to enhance the quality of coaching environment and foster the growth and progress of athletes. Nevertheless, it is essential to acknowledge that there exists potential for enhancement and more investigation within the realm of coaching. Furthermore, instructors heavily stressed competitive techniques while barely emphasizing bad interpersonal relationships. This indicates that coaches concentrated mostly on getting their athletes ready for competition. The outcome shows that coaches employed fewer unfavorable methods of coaching.

The results of the study were related to a synthesis conducted by Michael Marcone (2017), which is "The Impact of Coaching Styles on the Motivation and Performance of Athletes". It reveals that one specific coaching style may not be appropriate or effective for all athletes, but it is evident that the coaching style contributing the most positive impact to athlete motivation and performance is the autonomy supportive coach where a coach exhibits behaviors and tendencies that allow for the psychological needs of athletes to be met in order to feel that they have freedom, the necessary skills to participate, and are connected to the individuals with whom they are associated with when participating in a sport.

Renzo Kerr-Cumbo (2011) found that there is only a small association between coaches and their players' opinion of the coaches' autonomy-supportive behavior in his study "Athletes' and Coaches' Perceptions of the Coach's Behaviour". Regarding controlling behavior, there is simply no association. The extent of the coach's perceived autonomy and supporting behavior, on the other hand, are highly correlated with the athlete's assessment of a favorable relationship with his coach.

Table 1. Coaching Styles and Coaching Behaviors exhibited by Coaches

Variables	Mean	Verbal Interpretation
COACHING STYLES		
Authoritarian	3.75	Oftentimes
Democratic	4.23	Almost Always
Laissez-faire	3.84	Oftentimes
Average Mean	3.94	Oftentimes
COACHING BEHAVIORS		
Physical Training and Planning	4.30	Almost Always
Technical Skills	4.28	Almost Always
Goal Setting	4.28	Almost Always

Mental Preparation	4.21	Almost Always
Competitive Strategies	4.31	Almost Always
Personal Rapport	4.26	Almost Always
Negative Personal Rapport	3.35	Sometimes
Average Mean	4.14	Oftentimes

Motivational Factors utilized by Coaches to enhance Athletes' Performance

Table 2 shows the motivational factors used by coaches to enhance the performance of athletes. Generally, coaches "Almost Always" used motivational factors to influence athlete's performance with the overall mean of 4.42. However, coaches "Almost Always" used both in intrinsic with the mean score of 4.44 and extrinsic with the mean score of 4.41 respectively.

Table 2. Motivational factors utilized by Coaches to Enhance Athletes' Performance

Motivational factors	Mean	Description
Intrinsic	4.44	Almost Always
Extrinsic	4.41	Almost Always
Total	4.42	Almost Always

(13) Conclusions and Recommendations

Conclusions

The prevalence of the democratic coaching technique and the relatively limited popularity of the authoritarian teaching style underscore the universal tendency among coaches to create a supportive and participatory environment for their athletes. The democratic approach frequently involves coaches maintaining decision-making authority while also facilitating player involvement in decision-making processes, problem-solving activities, goal-setting initiatives, and training strategies. The sentence above refers to a coaching approach that places importance on the progress of athletes, promoting their development through a combination of individual and team involvement.

An observed coaching characteristic that stands out is the regular utilization of competitive strategies. This technique emphasizes the coaches' commitment to thoroughly preparing their athletes for competitive events by addressing their requirements and promoting a sense of composure throughout competitions. Conversely, coaches rarely promote the development of negative personal relationships, thus emphasizing their dedication to promoting positive coach-athlete dynamics. Coaches frequently avoid participating in harmful actions, such as shouting or employing intimidation strategies.

Recommendations

Coaches may prioritize goal-setting, technical expertise, interpersonal skills, personal rapport, and mental readiness, alongside competitive strategies. It is advisable for coaches to utilize positive approaches while dealing with athletes, rather than negative ones, even if they may seem to be supportive of the athlete's self-esteem.

Athletic associations can provide sports coaching orientation, conferences, seminars, workshops, and training programs/activities for coaches who are interested. They may engage in discussions regarding

			Page	Page 5 of 7

the challenges and concerns faced by coaches during the coaching process and provide recommendations for effective ideas, methods, and tactics, as well as potential solutions. Athletic managers, sports officials, and sports coordinators organize annual sporting events in educational institutions or athletic associations to enhance the coaches' professional development, personal growth, and coaching expertise.

In addition to competitive approaches, coaches may place additional focus on goal-setting, technical excellence, interpersonal skills, personal chemistry, and mental preparation. Athletic associations can host conferences, seminars, workshops, orientations for sports coaches, and training programs/activities for coaches that are interested.

Through educational institutions or athletic groups, athletic managers, sports officials, and sports coordinators can organize annual sporting events to further the coaching experience and professional and personal development of the coaches.
