(9A) Abstract

Abstract

Gender and Development (GAD) is an essential issue in higher education institutions globally, and universities must ensure gender equality and inclusion in their policies, practices, and activities. However, little research has been done to investigate the level of awareness, knowledge, and implementation of GAD concepts and activities in higher education institutions, particularly in the province of Capiz, Philippines. To address this gap, a study was conducted at the Capiz State University (CAPSU) Sigma campus, with the aim of assessing the level of awareness, knowledge, and implementation of GAD concepts and activities among the faculty, staff, and students. The study used a descriptive research design that incorporated both quantitative and qualitative methods, and a total of 331 respondents were included in the study. The study found that the overall level of awareness of the CAPSU Sigma community on GAD concepts is moderately aware, with the highest mean scores for faculty and staff in Gender Identity and Gender Roles, and for students in Gender Equality and Gender Identity. The CAPSU Sigma community is knowledgeable about GAD mandates, with the highest mean scores in Republic Acts 6949 and 10398. Regarding the extent of implementation of GAD activities, the CAPSU Sigma community perceives it as mostly implemented, with Community Extension Training on Livelihood and Webinars on Violence against Women and Children being the top implemented activities. The study's findings have implications for developing strategies and programs to promote gender equality and inclusion in the university's policies and practices. The study's use of quantitative method and it uses statistical analysis techniques add to the existing literature on research methodology in gender and development studies. Overall, the study provides insights into the level of awareness, knowledge, and implementation of gender and development concepts and activities among the faculty, staff, and students of CAPSU Sigma.

(9B) Keywords: *Gender equality, inclusion, mandates, community extension, livelihood, webinars*

(10) Introduction

Introduction

To address the gap in knowledge regarding the level of awareness, knowledge, and implementation of Gender and Development (GAD) concepts and activities in higher education institutions, particularly in the province of Capiz, this study aims to provide valuable insights. The importance of such studies is highlighted by previous research conducted in the Philippines, which emphasizes the significance of GAD implementation for sustainable development goals (Regalado, 2019). Additionally, studies examining gender sensitivity in teacher education curricula further emphasize the need for gender-responsive approaches in higher education institutions (Gomez, 2018).

Moreover, this study aimed the specific gap within the Office of Gender and Development (OGAD) of CAPSU Sigma. Despite the important role played by the OGAD in promoting gender mainstreaming and integration in policies and programs,

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

there is currently no available information regarding the level of awareness, knowledge, and implementation of GAD concepts and activities within CAPSU Sigma.

In summary, this study is significant because it contributes to the existing body of knowledge on GAD implementation in higher education institutions, particularly in the province of Capiz. It aims to fill the gap in understanding the level of awareness, knowledge, and implementation of GAD concepts and activities within CAPSU Sigma, providing insights that can inform the development of effective policies and programs for gender equality and inclusion.

The objectives of this study are:

1. Determine the demographic profile of the respondents in terms of age and gender.
2. Determine the level of awareness of CAPSU Sigma faculty and staff and students on Gender and Development (GAD) concepts.
3. Determine the level of knowledge of CAPSU Sigma faculty and staff and students on Gender and Development (GAD) mandates.
4. Determine the extent of implementation of Gender and Development Activities of CAPSU Sigma?
5. Determine the significant difference in the level of awareness, knowledge, and extent of implementation in terms of the demographic among the faculty and staff and students.
6. Determine the significant relationship on the level of awareness, knowledge, and extent of implementation among the CAPSU Sigma faculty and staff and students.

(11) Materials and Methods or Methodology

Theoretical Framework

The social learning theory, developed by Albert Bandura (1977), can be a relevant theoretical framework to explore the study on the awareness, knowledge, and implementation of gender and development concepts and activities among CAPSU Sigma faculty, staff, and students. The social learning theory emphasizes how individuals acquire knowledge, attitudes, and behaviors through observation, imitation, and reinforcement within a social context.

Methodology

The study titled "Awareness, Knowledge, and Implementation of Gender and Development Concepts and Activities of CAPSU Sigma" aimed to assess the level of awareness, knowledge, and implementation of gender and development concepts and activities among faculty, staff, and students at Capiz State University (CAPSU) Sigma Satellite College. It employed a descriptive research design, utilizing both quantitative and qualitative methods. The study was conducted from July 2022 to March 2023 and included 331 respondents consisting of 13 faculty members, 3 staff members, and 315 students. A researchers-made survey questionnaire and interview guide were used, which underwent validation by a panel of experts. The sample size was determined using the Cochran formula with a 95% confidence level and 5%

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

margin of error, employing a stratified random sampling technique. Statistical analyses, including t-tests and Pearson correlation, were utilized to examine differences in awareness, knowledge, and implementation across demographic groups and to explore relationships between these variables. Mean and frequency counts were also calculated in the study.

(12) Results and Discussions

Results and Discussions

1. Demographic profile of the respondents in terms of age and gender

Table 1 in the appendix (please refer to Appendix A) displays the demographic profile of the respondents in terms of age and gender for the study titled "Awareness, Knowledge and Implementation of Gender and Development Concepts and Activities of CAPSU Sigma." The data reveals the distribution of participants in terms of age groups and gender. Out of the total 331 participants, 50% were aged 20 years old and below, 47% were between the ages of 21 to 30 years old, and only 3% were above 30 years old.

Regarding gender distribution, 63% of the participants identified as female, 34% as male, and 3% as LGBTQIA+. These findings are pertinent to the study on awareness, knowledge, and implementation of gender and development concepts, suggesting the possibility of age and gender-related variations in the awareness and understanding of these concepts. Previous studies, such as the research conducted by Lent et al. (2016), have indicated that younger individuals may exhibit higher levels of interest and self-efficacy in learning about gender and development concepts. Furthermore, the study by Neff and Weeden (2017) found gender-based differences in the perception of knowledge, with men more likely to overestimate their knowledge and women more likely to underestimate theirs. These gender-based differences in perception could influence engagement in gender and development activities, potentially resulting in a gap in the implementation of gender and development concepts.

This information is significant as it provides an understanding of the participants' demographic characteristics, enabling a more comprehensive analysis of potential disparities in awareness, knowledge, and implementation of gender and development concepts based on age and gender.

2. Level of awareness of CAPSU Sigma faculty and staff and students on Gender and Development (GAD) concepts

The data presented in Table 2 (please refer to Appendix B) provides insights into the level of awareness among CAPSU Sigma faculty, staff, and students regarding Gender and Development (GAD) concepts. The mean scores offer a comprehensive understanding of the average awareness levels across different statements for each group. The grand means indicate a moderately aware level of understanding among both students (2.88) and faculty/staff (3.44).

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

Analyzing the data further, it is notable that the highest mean scores for each group indicate areas where they demonstrate relatively stronger awareness. For students, the statement "Gender Equality" (mean = 3.11) receives the highest mean score, indicating a moderate level of awareness regarding equal rights, obligations, and opportunities for individuals of different genders. Among faculty and staff, the statement "Gender Identity" (mean = 3.63) receives the highest mean score, suggesting a highly aware understanding of the individual's perception of their own gender.

Conversely, the statement with the least mean score reveals the area where both groups have the lowest level of awareness. The statement "Gender Needs" receives the least mean score for both students (mean = 2.73) and faculty/staff (mean = 3.31), indicating room for improvement in understanding the specific requirements for men and women to advance their positions. Recognizing the relatively stronger awareness of gender equality among students and the highly aware understanding of gender identity among faculty and staff, CAPSU Sigma can tailor educational programs and interventions to further enhance understanding in these areas. Additionally, efforts should be focused on increasing awareness and understanding of gender needs to ensure a comprehensive understanding of GAD concepts among the participants. By addressing areas of lower awareness, CAPSU Sigma can work towards fostering a more inclusive and gender-sensitive educational environment.

The findings of this study align with the research conducted by Ali et al. (2019) in Pakistan, which aimed to assess gender mainstreaming in higher education institutions. Their study revealed a lack of gender awareness among faculty, staff, and students, as well as gender disparities in access to education and employment opportunities. Discrimination, unequal treatment, and gender-based violence were identified as major issues. The study highlighted the need for increased efforts to promote gender mainstreaming, gender equality, and women's empowerment in higher education institutions through awareness-raising, training, and policy interventions.

Overall, the results of the study on awareness, knowledge, and implementation of GAD concepts among CAPSU Sigma participants provide valuable insights for addressing gaps in understanding and promoting a more gender-inclusive educational environment.

3. Level of knowledge of CAPSU Sigma faculty and students on Gender and Development (GAD) mandates

The data presented in Table 3 (please refer to Appendix C) focuses on the level of knowledge among CAPSU Sigma faculty, staff, and students regarding Gender and Development (GAD) mandates. The grand means, top two means with their respective statements, and the least mean are analyzed to gain a comprehensive understanding of the data. The grand mean represents the overall average level of knowledge across all statements for each group. Students have a grand mean of 3.41,

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

indicating a knowledgeable level of understanding, while faculty and staff have a grand mean of 3.60, reflecting a very knowledgeable level of knowledge.

Examining the individual statements, the ones with the highest mean scores for each group highlight areas where participants demonstrate a stronger understanding. For students, the statement regarding the declaration of National Women's Day receives the highest mean score, indicating a high level of knowledge about Republic Act (RA) 6949, which designates March 8 as National Women's Day. Among faculty and staff, the statement concerning the declaration of November 25 as the National Consciousness Day for the Elimination of violence against women and children receives the highest mean score, suggesting a very knowledgeable understanding of Republic Act (RA) 10398.

Conversely, the statement with the least mean score indicates an area where both groups have the lowest level of knowledge. The statement addressing limited knowledge of gender-related issues and manifestations of gender inequality reveals an opportunity for improvement. This suggests that participants can benefit from increased knowledge regarding experiences of gender inequality and related issues faced by students, staff, and within their own homes. Overall, CAPSU Sigma demonstrates a good level of knowledge among its faculty, staff, and students regarding GAD mandates, with particular strength in understanding designated days for women and the elimination of violence against women and children. However, efforts should be directed towards enhancing knowledge about gender-related issues and manifestations of gender inequality.

The findings of this study are supported by other authors' research. Amatorio and Bandong (2017) found challenges in promoting gender equality in a state university, highlighting the importance of active participation and involvement of both men and women in promoting GAD in higher education. Garcia and Tan (2018) identified gaps in addressing gender stereotypes and biases in the implementation of the K to 12 curriculum by teachers in the Philippines. Abayan and Bagunu (2016) emphasized the importance of promoting gender equity in STEM education and the inclusion of gender-sensitive perspectives in curriculum and teaching strategies. Tan and Wong (2015) highlighted gaps in policy implementation and the need for stronger accountability mechanisms in promoting GAD in Philippine higher education institutions. Bandong and Castro (2015) emphasized the importance of building a gender-sensitive institutional culture and providing training and resources for gender mainstreaming efforts in teacher education.

These studies collectively suggest that while there are existing policies and programs for promoting gender equality in Philippine higher education, there are still challenges and gaps that need to be addressed. CAPSU Sigma participants show a good level of knowledge on GAD mandates, but there is room for improvement in areas such as increasing knowledge and participation in GAD-related programs and initiatives. This calls for the implementation of IEC activities and training programs to promote gender sensitivity and awareness among CAPSU Sigma students, faculty, and staff.

			Page	Page 1 of 2

4. Extent of implementation of Gender and Development Activities of CAPSU Sigma

The data presented in Table 4 (please refer to Appendix D) focuses on the extent of implementation of Gender and Development (GAD) activities at CAPSU Sigma. By analyzing the grand means, top two means with their corresponding statements, and the least mean for each group, we can gain a comprehensive understanding of the extent of implementation. The grand means represent the average level of implementation across all statements for each group. Students have a grand mean of 3.06, indicating a moderate extent of implementation, while faculty and staff have a grand mean of 3.32, also reflecting a moderate extent of implementation. Examining the individual statements with the highest mean scores for each group helps identify areas where implementation has been more extensive.

Among students, the statement regarding community extension training on livelihood receives the highest mean score, suggesting a moderate extent of implementation in this area. For faculty and staff, the statement about community extension training on livelihood has the highest mean score, indicating a relatively large extent of implementation in this area. Conversely, the statement with the least mean score indicates an area where implementation has been relatively limited, specifically webinars on Teenage Pregnancy, which have a moderate extent of implementation. There is an opportunity to enhance the implementation of webinars addressing teenage pregnancy among both students and faculty/staff.

Overall, CAPSU Sigma has implemented GAD activities to a moderate extent. The institution has made progress in areas such as community extension training on livelihood, virtual training, webinars on gender sensitivity and violence against women and children, and the development of IEC materials on relevant laws. However, there is room for improvement, particularly in implementing webinars on teenage pregnancy. By expanding and enhancing the implementation of GAD activities, CAPSU Sigma can further promote gender sensitivity, address key gender-related issues, and provide a more inclusive and supportive environment for its students, faculty, and staff. Continued investment in training, symposiums, and research related to GAD can help elevate the extent of implementation and create a positive impact within the CAPSU Sigma community.

A related study by Regalado (2019) assessed the integration of GAD in the research and extension programs of a state university in the Philippines. The findings revealed limited integration of GAD in the programs, emphasizing the need to strengthen the implementation of GAD policies and programs in higher education institutions. Bañares et al. (2018) examined gender mainstreaming and women's empowerment programs in Philippine higher education institutions, highlighting the need for comprehensive policies and guidelines to ensure program sustainability and effectiveness. Dimaano and Racho (2015) assessed gender mainstreaming practices in state universities and colleges in Calabarzon, Philippines, emphasizing the importance of resources, leadership support, and commitment to promoting and sustaining GAD programs.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

These studies collectively underscore the importance of comprehensive policies, guidelines, resources, and leadership support for the effective implementation of GAD programs in higher education institutions. They also provide insights for CAPSU Sigma to further improve its GAD activities and develop a more comprehensive and effective GAD program.

5. Significant difference in the level of awareness, knowledge, and extent of implementation in terms of the demographic among the faculty and staff, and students

Table 5.1 in Appendix E presents the significant difference in awareness, knowledge, and implementation levels among different age groups. The study examined participants' awareness, knowledge, and implementation of a program and found a significant difference in awareness across age groups. Older participants demonstrated lower awareness compared to younger participants. However, no significant differences were observed in knowledge and implementation among different age groups. The ANOVA analysis indicated a significant between-groups difference in awareness ($F = 3.34$, $p = 0.04$), while the between-groups differences in knowledge and implementation were not significant ($F = 0.5$, $p = 0.61$ and $F = 0.41$, $p = 0.67$, respectively). These results suggest the importance of improving awareness of the program among older participants while maintaining similar levels of knowledge and implementation across all age groups.

These studies collectively highlight the significance of age-related differences in health literacy, health information-seeking behaviors, and awareness among older adults. The study by Cai and Zhou (2019) focused on health literacy, age, and preventive health behaviors among middle-aged and older adults in China, revealing that older adults had lower health literacy and were less likely to engage in preventive health behaviors compared to younger adults. Similarly, the study by Kim and Kim (2020) explored age differences in health information-seeking behaviors among Korean adults, indicating that older adults were less likely to seek health information, leading to lower levels of health awareness. Additionally, the study by Ross, Frier, and Crighton (2014) investigated factors associated with the uptake of fall prevention interventions among community-dwelling older adults, highlighting that older adults were less likely to participate in such interventions due to lack of awareness and perceived barriers. These findings underscore the importance of targeting older adults with interventions, strategies, and awareness campaigns to improve their health literacy, information-seeking behaviors, and overall health outcomes.

5.2 Significant difference in the level of awareness, knowledge, and extent of implementation in terms of gender

Table 5.2 in Appendix F presents the results of a study investigating the differences in awareness, knowledge, and implementation between genders. The ANOVA analysis reveals a significant difference in awareness between genders ($F(2, 328) = 3.84$, $p = 0.02$), suggesting that awareness levels vary based on gender. However, no significant differences were found in knowledge ($F(2, 328) = 2.26$, $p = 0.11$) or

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

implementation ($F(2, 328) = 1.92, p = 0.15$) between genders. These results imply that interventions aiming to increase awareness should consider gender differences. These findings are supported by related studies. Kim et al. (2015) found that women had higher health knowledge than men, while Shadish and Baldwin (2003) demonstrated that interventions targeting both genders were more effective in improving marital and family relationships. Miller's (2017) analysis indicated that women exhibited higher environmental knowledge, and Gabbidon et al. (2016) observed that women had greater knowledge and concern about cybercrime. Taken together, these studies highlight gender differences across various domains and emphasize the importance of considering these differences in interventions and policies to enhance outcomes. Further research is required to validate these findings and explore the underlying factors contributing to these disparities.

6. Significant relationship on the level of awareness, knowledge, and extent of implementation among the CAPSU Sigma faculty, staff, and students

Table 6 in Appendix G presents the results of a study examining the relationship between awareness, knowledge, and implementation among CAPSU Sigma faculty, staff, and students. The findings reveal significant positive correlations between awareness and knowledge ($r = .556, p < .001$), awareness and implementation ($r = .564, p < .001$), and knowledge and implementation ($r = .627, p < .001$). These results indicate that higher levels of awareness and knowledge are associated with increased implementation. These findings have implications for interventions targeting awareness, knowledge, and implementation, suggesting that interventions focused on increasing awareness should also prioritize knowledge enhancement to facilitate improved implementation. A related study by Moshkelgosha et al. (2019) examining oral health behaviors among Iranian students supports these findings, showing a significant positive correlation between knowledge and practice ($r = .431, p < .001$). This highlights the potential for interventions aimed at improving knowledge to drive better implementation of desired behaviors. However, further research is needed to validate these findings and investigate the underlying mechanisms of these relationships.

(13) Conclusions and Recommendations

Conclusions

Based on the findings of the study, the following conclusions were being drawn;

1. The study highlights the need for targeted interventions to enhance awareness and knowledge of gender and development concepts among different age groups and genders.
2. CAPSU Sigma faculty, staff, and students show moderate awareness of Gender and Development (GAD) concepts, with variations in different areas that require improvement.
3. CAPSU Sigma students, faculty, and staff possess a generally knowledgeable understanding of Gender and Development (GAD) mandates, although some areas of knowledge score higher than others.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

4. The implementation of Gender and Development (GAD) activities in CAPSU Sigma is mostly effective, with certain areas needing attention and improvement.
5. Participants of different age groups and genders demonstrate significant differences in awareness levels, while knowledge and implementation remain consistent across these groups.
6. The study reveals a positive relationship between awareness, knowledge, and implementation, emphasizing the importance of enhancing awareness and knowledge for effective implementation of GAD concepts and activities.

Recommendations

Based on the conclusions of the study, the following recommendations were being drawn:

1. Tailored interventions should be implemented to enhance awareness, knowledge, and implementation of gender and development concepts, considering the specific needs and preferences of different age groups and genders.
2. To improve awareness on GAD concepts, CAPSU Sigma should provide comprehensive information and training programs, integrate GAD concepts into relevant courses, and organize seminars and workshops.
3. CAPSU Sigma should offer additional training and educational opportunities on gender equality and related laws and policies, along with initiatives that promote gender equality and diversity within the campus.
4. CAPSU Sigma should prioritize and effectively implement successful GAD activities, while giving attention to improving the implementation of specific activities. Institutionalization and sustainability of GAD programs should be emphasized.
5. Implement policies and programs that promote gender equity and inclusion, including gender and diversity education, GAD programs and activities, policies protecting LGBTQ+ rights, and a safe and inclusive learning environment.
6. Efforts should be made to improve awareness among older participants and female participants, while maintaining consistent levels of knowledge and implementation across all age groups and genders. Further research is needed to understand the differences in awareness and develop effective strategies.
7. Integrate interventions to enhance awareness, knowledge, and implementation among CAPSU Sigma faculty, staff, and students, and conduct further research to identify effective strategies for promoting these factors.

Appendix D - Extent of implementation of Gender and Development Activities of CAPSU Sigma

Extent of Implementation	Mean	Verbal Interpretation	Mean	Verbal Interpretation
Statements		Student	Faculty and Staff	
1. Webinars on Teenage Pregnancy"	3.00	To Moderate Extent	3.38	To Moderate Extent
2. Virtual training on livelihood	3.02	To Moderate Extent	3.00	To Moderate Extent
3. Community extension training on livelihood	3.04	To Moderate Extent	3.56	To a Large Extent
4. Training and National Disaster Risk Reduction Management	3.13	To Moderate Extent	3.31	To Moderate Extent
5. Webinar to students and personnel on Gender Sensitivity	3.17	To Moderate Extent	3.38	To Moderate Extent
6. Webinars to students on Anti-Sexual Harassment/ Pre-recorded Video Presentations	3.14	To Moderate Extent	3.38	To Moderate Extent
7. Online symposium on RA 11313 (Safe Spaces Act)	3.00	To Moderate Extent	3.19	To Moderate Extent
8. In-house reviews per campus and conduct GAD related researches	3.03	To Moderate Extent	3.31	To Moderate Extent
9. Webinars on Violence against women and children (VAWC)/ film showing	3.07	To Moderate Extent	3.56	To a Large Extent
10. National, International and Local webinars and virtual trainings (GAD related)	3.07	To Moderate Extent	3.50	To a Large Extent
11. Webinar on the different laws and legislations that guide gender mainstreaming initiatives	3.02	To Moderate Extent	3.13	To Moderate Extent
12. Development and reproduction of IEC materials on the following topics: RA 9262 (Anti-Violence Against Women and their Children Act of 2004); RA 8353RA (The Anti-Rape Law of 1997); RA 7877 (Anti-Sexual Harassment Act of 1995); RA 9208 as amended by RA 10364 (Expanded Anti-Trafficking in Persons Act of 2012); RA 9710 (Magna Carta of Women)	3.07	To Moderate Extent	3.31	To Moderate Extent
13. Webinar on Integrating in Gender in Classroom Instruction	3.05	To Moderate Extent	3.06	To Moderate Extent
14. Webinar on Gender Sensitivity	3.08	To Moderate Extent	3.44	To Moderate Extent
15. Webinars, online symposium and meetings to the faculty and staff: Basic Sex and Gender Concepts	3.04	To Moderate Extent	3.25	To Moderate Extent
Grand Mean	3.06	To Moderate Extent	3.32	To Moderate Extent

Appendix E - Significant difference in the level of awareness, knowledge, and extent of implementation in terms of the demographic among the faculty and staff and students in terms of Age.

ANOVA						
		Sum of Squares	df	Mean Square	F	Sig.
Awareness	Between Groups	3.755	2	1.878	3.34	0.04
	Within Groups	184.311	328	0.562		
	Total	188.066	330			
Knowledge	Between Groups	0.748	2	0.374	0.5	0.61
	Within Groups	247.28	328	0.754		
	Total	248.028	330			
Implementation	Between Groups	0.434	2	0.217	0.41	0.67
	Within Groups	175.145	328	0.534		
	Total	175.579	330
