(7) Sector/Commodity	(8) Discipline/Field of Specialization Social Science
(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.) The Panay Bukidnon are one of only two indigenous communities in the Visayas, the other being the Iraynun-Bukidnon. Also known as the Tumandok or Suludnon, the Panay Bukidnon communities are scattered across the hinterlands of Panay, particularly in the interiors of Tapaz, Capiz. (DFA, 2022) One of the greatly affected by the pandemic are the Panay Bukidnon tribe of the Visayas. The Panak Bukidnon are the tumandok, the native or Indigenous dwellers of the more interior portions of Panay Island, covering the interior barangays of the four provinces of Aklan, Antique, Iloilo, and Capiz. They speak the same Kinaray-a language with very few semantical differences, and are similar in their farming and hunting practices, in their spiritual beliefs and binabaylan (shamanistic) practices, in their having a binukot (kept maiden) tradition, and in their tradition of epic chanting. Every activity, whether in agriculture, fishing, hunting, and so on, is influenced by the environmental spirits and deified umalagad (souls) of the departed ancestors. Their economic life is largely dependent on ka'ingin agriculture, supplemented with hunting and fishing. They also make bolos with elaborately carved handles, knives, and spears and weave baskets, mats, and headwear - items which they exchange for lowland goods such as cloth, salt, and other household necessities brought into the mountains by Christian traders with whom they carry on seasonal commercial relations. (Haliya, 2017) Visayas is very rich in the Panay Bukidnon culture and in this time of post-pandemic, the researchers wanted to know the cultural preservation practices and socio-economic activities, hence, this ethnographic study was pursued.	
(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned. .)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

The study sought to determine the socio-economic practices of Panay Bukidnon in selected upland communities in Tapaz in the Post-Covid 19 pandemic. More specifically, it sought to answer the following questions:

1. What is the demographic profile of Panay Bukidnon in selected upland communities in Tapaz?
2. What are the socio-economic practices of Panay Bukidnon?
3. What are the cultural preservation of Panay Bukidnon?
4. What are problems encountered related to socio-economic of Panay Bukidnon?
5. What are problems encountered related to cultural preservation of Panay Bukidnon?

(11) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.)

Research Instrument

The researcher will conduct one-on-one interview using a survey questionnaire checklist to gather data on the healing practices and alternative medicine they use. The survey questions will composed of three parts: Part I, includes the demographic profile and personal data of the respondents such as age, sex and family monthly income, Part II, the questionnaire proper comprise the different activities that determine the socio-economic and Cultural practices that they are doing in this time of pandemic, Part III consist the problems encountered by Panay Bukidnon in terms of socio-economic and cultural preservation. The researchers will check the survey questionnaire in accordance to the response of the respondents during the one on one interview.

(12) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of-the-art of current technology / information from which the project proposal will take-off).

REVIEW OF RELATED LITERATURE

Panay Bukidnon and their continuing belief system related to their subsistence activities

The National Museum of the Philippines (2021) stated that as the #NationalMuseumPH continues to celebrate the National Indigenous Peoples Month, our #Museum fromHome features the Panay Bukidnon inhabiting the highlands of Panay Island in Western Visayas and their continuing belief system related to their subsistence activities. The Panay Bukidnon traditionally depended on kaingin or shifting cultivation, supplemented by hunting, fishing, and local trade. In particular, agricultural production is guided by signs and omens, such as phases of the moon which are often anticipated as basis of when and what to plant. It is believed that the ugsad (full moon) and lati (3 days before and after new moon) affect the produce from the planted crops. The third day after new moon is also called himatayon when it is a waning crescent. During lati, they plant root crops such as balinghoy (cassava) and kamote (sweet potato). Called hanulod, this is considered a good time to plant root crops and other tubers as it is believed that they would bear big tubers to harvest. Hamonga or planting of beans like latoy (string beans) and monggo (mung beans) also assures them good yield. The Panay Bukidnon also awaits the ugsad. Bananas are best planted during hambot (day after full moon) since it induces the

			Page	Page 4 of 6

growth of more saha (banana sucker). Paminhi (sowing of rice) must also be done during ugsad. Rice planted with lots of muro-puro or bitoon (stars) at night are believed to yield good harvest. Successful fishing is also guaranteed during lati. Panolo (fishing at night) is best done during this period since fish like sili (eel), urang (shrimp), and kagang (crab) are abundant in the river and are easily caught at night. From 2017 to 2019, the Ethnology and Botany and National Herbarium Divisions, and NM Western Visayas Regional Museum documented the cultural and natural heritage of the communities in Calinog, Iloilo. In October 2020, NM Western Visayas held an online film screening, director's talk, and lectures on the Pátok (The Mountain Carvers), which discussed the rice terracing tradition of the Iraynon Bukidnon of San Remigio, Antique and underscored the importance of their ancestral lands to their way of life.

Related Studies

Ethnic groups are known as minorities in any society. However, the richness of their culture can never be undermined, rather, it serves as defining stuff of history that is worthy of being upheld and preserved. This ethnographic study was specifically designed to investigate how the Panay Bukidnon-Halawodnons in barangay Agcalaga, Calinog, Iloilo, Philippines upheld their cultural society amidst the influence of the mainstream institutions in their community during the 1st quarter of 2019. The informants were chosen through purposive sampling on the basis of the inclusion criteria set before them. Permission from the National Commission on Indigenous Peoples (NCIP) and the cultural community was secured prior to the conduct of fieldwork in the said area. The researchers performed data triangulation and ground truths for the validity of data and observed data saturation for the reliability of the gathered data. NVivo 12 Plus was used for conceptual analysis while the researchers themselves did the analytic analysis. Barangay Agcalaga is generally on its midway progress. Being a cultural community, the Panay Bukidnon-Halawodnons in this place maintain their cultures such as Council of Elders, "binanog" dance, rituals in farming, house construction, circumcision, dagaan, luy-a luy-a, and batak-dungan; bayanihan; babaylan; and love of nature while their lost cultures include binukot; serenade (harana); traditional IP house; burial rites (embalming); dowry system; primitive costumes (bahag and patadyong). The Philippine government is called to ratify the Indigenous and Tribal Peoples Convention No. 169 or Convention 169 to fortify the cultures of the Indigenous Peoples not only in Calinog, Iloilo but also in the entire country. (**Olapane, Ricardo, & Azuelo, 2021**)

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

Research Design

The researchers use a descriptive research study entitled socio-economic practices and problems of Panay Bukidnon in selected upland communities in Tapazin the Post-Covid 19 pandemic namely: Aglapi, Daan Norte, Daan Sur and Tabon.

Respondents of the Study

The respondents of the study were the Panay Bukidnon who are presently living in the three upland barangays in Tapaz.

Data Gathering Procedure

The questionnaire will personally distribute to the respondents. The respondents fill up the information in the demographic profile honestly, then check appropriately the column in the Part II and Part III of the survey questionnaire checklist.

Data Analysis Procedure

All the data gather were tally, computed, analyze and interpret. The findings and the recommendations base on the conclusions.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart. Below is an example. This can be modified base on your desired Work plan.)

Research Objectives	Year 1						Year 2					
	July	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun
1. Field work/observation												
2. Analysis of data gathered from observation												
3. Lay-outing, Editing and Printing of 100 copies of coffee table book												

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(16) Targets Beneficiaries (Who the clienteles are and what are the expected outcome/effects of the use of the projects output)

Name	Role (Program, Project, Study Leader)	Field of Specialization
MAY JOY L. FERNANDEZ	Study Leader	Social Science

Percent time devoted to the Program/ Project/ Study 30%

Program/Project Leader (in hours): 3 hrs

Program/Project Members (in hours): 1hr

(18) Budgetary Requirement

SOURCES OF EXPENSES	Quantity	Amount (PhP)
A. Personnel Services (For studies needed the Research Assistant, informant/s, guide)		2,000.00
B. Maintenance and Other Operating Expenses (MOOE) (modify and include only whichever is applicable)		
- Transportation allowance		3,000.00
- Meal allowance during data gathering		3,000.00
- Professional fees (laboratory analysis and other related fees)		5,000.00
- Miscellaneous (for incidental expenses)		2,000.00
- Printing		5,000.00
C. CAPITAL OUTLAY		
Total		20,000.00

(19) Literature Cited (include only those references published in reputable journals, and at least that from CAPSU Research Journal, <http://researchjournal.capsu.edu.ph/>)

(20) Capsule Curriculum Vitae (One-page brief C.V. only)
