(9A) Abstract

This research was conducted at Capiz State University during the school year 2022-2023, focusing on the implementation and effectiveness of the Quality Management System (QMS) among teaching and non-teaching personnel. The primary objective was to assess the extent of QMS implementation and its effectiveness within the university context. A Quantitative approach was employed, utilizing survey to gather data from a representative sample of university staff.

The findings indicated that the extent of QMS implementation at Capiz State University is very high, as perceived by both teaching and non-teaching personnel. Similarly, the level of effectiveness of the QMS was also rated as very high. Statistical analysis revealed a significant relationship between the extent of QMS implementation and its effectiveness.. These results underscore the importance of rigorous QMS practices in enhancing institutional performance and achieving quality outcomes in educational settings. The study highlights the critical role of comprehensive QMS implementation in fostering a culture of continuous improvement and excellence within the university. Furthermore, the significant correlation between implementation extent and effectiveness suggests that strategic efforts to enhance QMS practices can substantially benefit operational efficiency and educational quality. Overall, this research contributes to the knowledge of quality management in higher education and provides actionable insights for university administrators aiming to optimize QMS practices for improved institutional performance.

(9B) Keywords

implementation, effectiveness, and quality management system

(10) Introduction

The principal motivation for pursuing quality certificate (ISO 9000) was the ability of the certificate to open customers' doors that were previously closed, or would close, if quality certificate were not achieved . . . (Dick, 2000)

The globalization of the world has led to the processes of quality internationalization becoming a crucial element of universities' competitiveness. Processes of quality internationalization are displayed by wider application of uniform methods, principles, and criteria for the formation of a quality policy, creation of international accreditation, notification, and quality certification systems.

The QMS is widely used by the organizations for achieving operational and market benefits, it is an optimized standard to upgrade and promote the companies and projects performance. The studies on the impact of QMS reported that these objectives are not always achieved. However, the successful implementation of the ISO 9001 (QMS) standard depends on how the standard is perceived by the companies. As a results, the previous studies on the impact of QMS revealed that the majority of the scholars found the positive effect of QMS on projects

(Manders, 2015)

The quest for qualities is probably more widespread and intense globally. Organizations have realized that the key to increased productivity and profitability is improving quality and to survive competition from local market and international market, they are forced to return to the basics of better-quality management and cost competitiveness measures for their products and services. Askari and Sohrabi (2017) state that the key benefit of organizations for implementing quality Management is the improvement of the link between the management system and innovation, which enhances processes and customer satisfaction.

Capiz State University (CapSU) being the only state university in the Province of Capiz, envisioned itself to be the center of academic excellence delivering quality service to all. With this, the institution keep itself abreast on improving its services and functions being at par in other universities in the country and also worldwide. Capiz State University as mandated by its Quadro-dimensional functions, namely; instruction, research, extension and production holistically provide services that cater the needs of its clients and partnered agencies. Hence, for its functions to be fully realized, these mechanisms must be measured and monitored so that equal and appropriate services and functions are being carried out on all its campuses and most especially, its satellite colleges.

To ascertain, this was conducted to provide answers the following questions:

1. What is the extent of implementation of the Quality Management System in terms of leadership, planning, support, operation, and performance evaluation?
2. What is the level of effectiveness of the Quality Management System in the university in terms of leadership, planning, support, operation, and performance evaluation?
3. Is there a significant relationship between the extent of implementation and level of effectiveness of the quality management system?

(11) Methodology

This quantitative research utilized the descriptive-correlational design. Descriptive, or exploratory studies are used when little is known about a particular phenomenon. The researcher observes, describes, and documents various aspects of a phenomenon. There is no manipulation of variables or search for cause and effect related to the phenomenon. Descriptive designs describe what actually exists, determine the frequency with which it occurs, and categorizes the information. Researchers pose Level I research questions. The results provide the knowledge base for potential hypotheses that direct subsequent correlational, quasi-experimental, and experimental studies (Sousa, 2007).

The respondents of the study are the teaching and non-teaching personnel of the six

satellite colleges of Capiz State University namely; Dayao Satellite College, Dumarao Satellite College, Mambusao Satellite College, Pilar Satellite College, Sigma Satellite College and Tapaz Satellite College with a total population of four hundred forty-six (446) during the academic year 2021-2022.

A researcher's -made questionnaire was used to gather the necessary data of the study. It underwent validity and reliability testing to measure its appropriateness and usability.

Statistical Tools and Analysis

The data was analyzed using the frequency and percentage, mean and SD, t-test, ANOVA, and Pearson's r interpreted at a 5% level of significance.

(12) Results and Discussions

Extent of Implementation of the Quality Management System in the area of Leadership, Planning, Support, Operation and Performance Evaluation as assessed by the Respondents

Research results revealed that the implementation of the Quality Management System in terms of Leadership, planning, support, operation and performance evaluation showed that it is very high ($m = 4.18 - 4.67$) respectively.

In terms of leadership, this signifies a comprehensive and effective approach to ensuring quality across all processes and operations within an organization. A very high QMS in leadership results in a well-organized, efficient, and customer-focused organization that continuously strives for improvement and excellence. This not only benefits the organization internally but also enhances its reputation and competitiveness in the market.

In terms of planning,

As to planning, it signifies that quality considerations are thoroughly integrated into the planning processes of the organization. A very high implementation of a QMS in planning ensures that quality is a fundamental aspect of the organization's strategic and operational planning. This leads to efficient use of resources, proactive risk management, stakeholder satisfaction, and continuous improvement, ultimately resulting in high-quality outcomes that align with the organization's goals and objectives.

As to support, it signifies that all supporting activities and services within an organization are designed and executed to uphold the highest standards of quality. A very high implementation of a QMS in support functions ensures that all supporting activities are aligned with and contribute to the organization's overall quality.

			Page	Page 5 of 9

objectives. This leads to efficient operations, enhanced employee performance, improved customer satisfaction, and a strong reputation for quality.

As to operation, it signifies that the core activities responsible for producing goods or services are managed with a strong emphasis on quality. A very high implementation of a QMS in operations leads to a highly efficient, effective, and customer-focused production environment. It ensures that quality is an integral part of the operational process, resulting in superior products or services, satisfied customers, and a strong competitive position in the market.

As to performance evaluation, it indicates that the organization has a robust and systematic approach to assessing and improving its performance. A very high implementation of a QMS in performance evaluation leads to a data-driven, systematic, and continuous approach to assessing and improving organizational performance. It ensures alignment with strategic goals, fosters a culture of accountability and improvement, and ultimately drives higher quality and better outcomes across the organization.

Table 1. Extent of Implementation of the Quality Management System in the area of Leadership, Planning, Support, Operation and Performance Evaluation as assessed by the Respondents

Variables	Range of Means	Interpretation
Leadership	4.18 – 4.44	Very High
Planning	4.29 – 4.53	Very High
Support	4.29 – 4.50	Very High
Operation	4.07 – 4.38	Very High
Performance Evaluation	4.38 – 4.67	Very High

Legend: Scale of Mean: 4.21 – 5.00 – Very High (VH), 3.41 – 4.20 - High (H), 2.61 – 3.40 - Satisfactory (S), 1.81 – 2.60 - Low (L), 1.00 – 1.80 – Very Low (VL)

Level of Effectiveness of the Quality Management System in the area of Leadership, Planning, Support, Operation and Performance Evaluation as assessed by the Respondents

In general, the level of effectiveness of the Quality Management System in the area of leadership, planning, support, operation and performance evaluation as assessed by the respondents is very high ($m = 4.18-4.46$) respectively.

In the area of leadership, it indicates that the organization's leadership is exceptionally competent in embedding and championing quality throughout the organization. When the effectiveness of a QMS in leadership is very high, it results in a robust and pervasive quality culture where everyone is aligned with the quality objectives. This leads to consistent high performance, continuous improvement, and strong stakeholder satisfaction. Leaders play a crucial role in setting the tone, providing direction, and ensuring that quality is a top priority across the organization.

			Page	Page 6 of 9

In the area of planning, it manifests that the organization excels in integrating quality considerations into its planning processes. When the effectiveness of a QMS in planning is very high, the organization is well-equipped to achieve its quality objectives through strategic alignment, comprehensive risk management, stakeholder involvement, and continuous improvement. This leads to efficient and effective operations, enhanced customer satisfaction, and a strong competitive position in the market.

In terms of the area in support, it shows that the supporting activities and services within an organization are exceptionally well-managed to maintain and enhance quality. When the effectiveness of a QMS in support functions is very high, it creates a strong foundation for quality across the organization. This results in efficient operations, satisfied employees and customers, and a robust reputation for quality and reliability. The alignment of support functions with the organization's quality goals ensures that every aspect of the organization contributes to achieving and maintaining high standards.

In the area of the effectiveness in operation, it signifies that the core activities responsible for producing goods or services are managed with exceptional precision and dedication to quality. When the effectiveness of a QMS in operations is very high, it results in a highly efficient, effective, and customer-focused production environment. The organization benefits from consistent high-quality outputs, enhanced customer satisfaction, and a strong competitive position in the market. This also ensures that operational risks are minimized and resources are used optimally, contributing to the overall success and sustainability of the organization.

In terms of performance evaluation, it indicates that the organization excels in systematically assessing and improving its performance. When the effectiveness of a QMS in performance evaluation is very high, the organization benefits from a robust and systematic approach to assessing and improving its performance. This leads to continuous improvement, enhanced employee engagement and accountability, and better alignment with strategic goals. The organization can make data-driven decisions, respond effectively to customer needs, and maintain a strong competitive position in the market.

Table 2: Level of Effectiveness of the Quality Management System in the area of Leadership, Planning, Support, Operation and Performance Evaluation as assessed by the Respondents

Variables	Range of Means	Interpretation
Leadership	4.37 – 4.46	Very High
Planning	4.29 – 4.39	Very High
Support	4.16 – 4.43	Very High
Operation	4.26 – 4.43	Very High
Performance Evaluation	4.18 – 4.41	Very High

Legend: Scale of Mean: 4.21 – 5.00 – Very High (VH), 3.41 – 4.20 - High (H), 2.61 – 3.40 - Satisfactory (S), 1.81 – 2.60 - Low

(L), 1.00 – 1.80 – Very Low (VL)

Relationships Among the Extent of Implementation, and Level of Effectiveness in the Quality Management System of the Respondents

There was a significant relationship between the extent of implementation and level of effectiveness of the Quality Management System by the respondents. The Pearson's result is at 0.782 with a p-value of 0.000. The p-value which was less than 0.01 level of significance meant that there was a significant relationship between the extent of implementation and level of effectiveness of the Quality Management System by the respondents. This implied that when the respondents' extent of implementation was high, the level of effectiveness was also high. This further implicated that Capiz State University, standing true to its vision to be the center of academic excellence by delivering quality service to all, never stop on innovating itself by conducting regular curriculum and management reviews to make it sure that it gave the best service and outputs to all its clienteles and contribute to nation-building by providing quality graduates and high-end services. The results denote a substantial or marked relationship.

This significant relationship further indicates that thorough and consistent implementation of quality management practices is crucial for achieving high-quality outcomes. It underscores the importance of embedding QMS principles deeply into the organization's processes and culture to enhance overall performance and effectiveness.

Table 3. Relationships Among the Extent of Implementation, and Level of Effectiveness in the Quality Management System

			Effectiveness

(13) Conclusions and Recommendations

CONCLUSIONS

1. CAPSU achieves a high level of quality excellence in terms of the implementation of the QMS. This comprehensive approach not only ensures superior quality and operational efficiency but also positions the organization for sustained success and competitive advantage.
2. The combined high effectiveness of leadership, planning, support, operation, and performance evaluation within a QMS signifies a mature and well-managed quality system. The organization benefits from superior quality outcomes, operational efficiency, and strategic alignment, positioning itself for long-term success and leadership in its industry. This comprehensive approach to quality management fosters a culture of excellence, continuous improvement, and customer-centricity, driving sustained organizational performance and competitive advantage.
3. The significant relationship between the extent of implementation and the level of effectiveness of a QMS underscores the importance of thorough and consistent deployment of quality management practices. Organizations that invest in comprehensive implementation are likely to experience enhanced effectiveness, achieving superior quality outcomes, operational efficiency, and strategic alignment. This relationship highlights the value of fully integrating QMS principles into all aspects of the organization to drive continuous improvement, optimize resources, and deliver exceptional value to customers and stakeholders.

RECOMMENDATIONS

1. CAPSU must maintain and strengthen its leadership commitment by having ongoing leadership engagements and leadership development. It should enhance strategic planning by having regular review and adaptation of its quality management plans and long-term goals integration. It should optimize support functions that allocate its resources and integrate its support functions (HR, IT, facilities). Further, it should foster a culture of quality wherein employees are involved and promote continuous learning and development to keep employees and management updated on best practices and new developments in quality management.
2. The University should maintain compliance and proactive risk management wherein regular monitoring and risk management framework that constantly update and enhance to identify and mitigate risks proactively. Further, it should encourage the sharing of best practices and; lessons learned across the organization to leverage collective knowledge and drive improvements.
3. The University should develop a detailed implementation plan that outlines all aspects of the QMS, including leadership, planning, support, operation, and performance evaluation. Ensure that each component is thoroughly integrated into the organization's processes. Provide comprehensive training to all employees on QMS principles and practices. Ensure that everyone understands their role in the quality management system and the importance of consistent application.
