(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

College education is considered as the make-or-break point in a person's life, especially here in the Philippines as education is valued highly and that it is easier to land a job when you have a bachelor's degree. However, college can be tough, especially in education students as they will serve as future teachers and role models of the youth. They must uphold the highest morale, be mentally alert, must have excellent scholastic standing, and be emotionally stable as they are trained to be strong and ready before facing the real-world of teaching. As soon to be teachers, they must not only be able to pass exams, make excellent lesson plans and instructional materials, but they also need grit and emotional intelligence and how these impact their academic resilience.

Grit is passion and perseverance for long term goals which drives one to continue and pursue the goals even if there are setbacks or slow progression (Duckworth, A., 2024).

According to Deepak, A. & Krishnamoorthy, K. (2016), one of the important soft skills in tertiary is the emotional intelligence, and ability to meanings behind emotions, relationships, and problems based on it.

With the hurdles that education students face every day, it is important that they are resilient especially academically. According to Ye, W., Strietholt, R. & Blömeke, S. (2021) academic resilience refers to students' capacity to perform highly despite a disadvantaged background.

Entering tertiary education is no easy task as students face several challenges before achieving the diploma. One of the keys in unlocking this long-term goal is for the students to have grit and not stopping until it is fully accomplished. Gritty students compared to those who are not will most likely be able to complete their degrees despite the hardships as they tend to persevere more and sees the obstacles as only setbacks and not dead ends. Also, students with strong emotional intelligence will be more flexible and adaptable to change, thus they have healthy well- being with healthy relationships and connections especially to their students. With this, they must also be academically resilient to be able succeed in the face of adversity and preserve more to become successful and achieve their long-term goals.

Hence, this study will be conducted to determine the level of grit and emotional intelligence of the Bachelor of Elementary Education (BEED) students of Capiz State University (CAPSU) Pilar Satellite College. The result of this study will be beneficial to the Teacher Education Department as it will serve as basis on where the department the institution would address the challenges that the students are facing. This will also assess the preparedness

	Document Type: FORM ISO 9001:2015	Document Code	RES-F09
		Revision No.	00
	Document Title: RESEARCH PROPOSAL	Effective Date	January 26, 2023
		Page	Page 4 of 20

of the students in entering the world of teaching and to improve the quality of the education graduates. Furthermore, this will contribute to innovations and curriculum improvement in order, not only to achieve high percentage on licensure exam for teachers, but also to produce quality and globally competitive graduates which is line with Sustainable Developmental Goals 3 (Good Health and Well- being) and 5 (Quality Education).

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

This study would like to find out the grit, academic resilience, and emotional intelligence BEED students of CAPSU Pilar. Specifically, this study would like to answer the following queries:

1. What is the level of grit of the BEED students of CAPSU Pilar as a whole and when grouped according to their age, sex, civil status, number of siblings, parents' occupation, parents' highest educational attainment, and estimated monthly family income?
2. What is the level of academic resilience of the respondents based on the selected profile?
3. What is the level of emotional intelligence of the respondents based on the selected profile?
4. Is there a significant difference between the grit, emotional intelligence, and academic resilience of the BEED students of CAPSU Pilar when grouped according to their age, sex, civil status, number of siblings, parents' occupation, parents' highest educational attainment, and estimated monthly family income?
5. Is there a significant relationship between the grit, emotional intelligence, and academic resilience of the BEED students of CAPSU Pilar when grouped according to their age, sex, civil status, number of siblings, parents' occupation, parents' highest educational attainment, and estimated monthly family income?

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of –the-art of current technology / information from which the project proposal will take-off).

Grit

Duckworth, an assistant University of Pennsylvania, and her research focused on a personality trait called "grit." She defined is as sticking with things for a very long time until it

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	January 26, 2023
			Page	Page 5 of 20

was mastered. She emphasized that gritty individuals have the stamina to achieve their desired goals (Handfor, E., 2024). Grit has two subcomponents: consistency of interests and perseverance of effort, and it is usually measure with Grit-S (Morell, M., et.al., 2020). Grit is a beneficial characteristic in an individual as it is associated with factors which relate to success and achievement, however there were also reservations in using grit as a significant measure of success (Crede et al., 2016, cited in Kannangara, C., et al., 2018). Other researchers have questioned if grit is unique from other related traits, like conscientiousness and self-control (Bowen, A. 2018). Goal- orientation is also related to grit as one tends to have a stronger desire to achieve the goal. Those who were reported who had higher grit tends to pursue their personal goals continuously and rigorously while those who have higher goal- orientation only base their response according to the needs of the environment or the demands of the tasks ((Duckworth et. al., 2007, as cited in Black., K., 2014).

Emotional Intelligence

Emotional intelligence is understanding the meaning behind emotions and how to solve the problems which arise from it. When people are aware of their emotions, it is easier for them to manage it, regulate their actions and expressions to have healthy relationships with themselves as well as with the others (Deepak, A. & Krishnamoorthy, K., 2016).

Present research highlight the importance of emotional intelligence and work outcomes since the publication of Daniel Goleman's best seller Emotional Intelligence: Why It Can Matter More Than IQ (Goleman, 1995, as cited in Zhou, X., 2010). Professional skills are no longer the only standard to measure graduates and employees, but the onset of soft skills like the emotional intelligence is also considered to distinguish if an individual would perform more that what is asked in the job description.

This help students show empathy with others and how to deal with difficult situations without getting flustered. This can affect relationships, scholastic standing, and handling pressures. Mamy research had already discovered that emotions affect learning, thus it is one component of growth: not only the academic excellence of a student (École Mondiale, 2024).

It is not only the students who must be aware of the value emotions, the teachers must also be well- aware of their emotional intelligence as it is also one of the components on effective lesson planning and deliver. When they can preside over their emotions, they may be able to also regulate the emotion of their students especially in stressful situations, thus affecting students' learning and well- being (Khassawneh, O., et. al., 2022).

EI is not only an individual's capacity to recognize and manage one's emotion, but it also being able to accept and respond effectively to the emotions of others. It makes an individual confront everyday problems patiently and this allows a person rationally even in

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	January 26, 2023
			Page	Page 6 of 20

temper- bursting situations; thus, fostering critical thinking, sound decision- making, and positive interpersonal relationships (McDonald, A.T., 2021).

Academic Resilience

Resilience can be recognized to individuals who succeed despite meeting with adversities, and it is also the ability to bounce back and surpass all odds. Academic resilience, on the other hand, is the educational success despite adversities (Cassidy, S., 2016). In this modern society, the students are facing a lot of challenges in school and society, and that if there are no steps made to overcome these, it will create pressure and stress among students leading to poor academic performance and higher dropout rate (Vani, K., 2021).

Academically resilient students were able to conquer all odds and sustain high academic performance despite being disadvantaged socio- economically. According to OECD (2024), while all students are facing diverse difficulties, the disadvantaged students perform poorly in school they do not have the resources for education and material resources as their parents had low- education with a low- paying job as well.

The excellent performance of students who are facing all odds piqued the curiosity of the researchers, and it was found out that academic resilience is a huge part of their success. According to Martin and Marsh (2006, cited in Mwangi, C., et.. al., 2017), academic resilience is the students' ability to have a positive mindset despite of pressure and stress. Academic resilient students have good interpersonal skills, high level of confidence with their ability in learning, have positive outlook towards school, and they take pride in their ethnicity with high expectations (Borman & Overman, 2004; Garmezy, 1993, cited in Mwangi, C., et. al., 2017). A resilient student also has personal agency that hugely impacts their motivation to overcome academic barriers (Solberg, Close, & Metz, 2002, cited in Mwangi, C., et. al., 2017).

(12) Scientific Basis/Theoretical Framework (Include concepts. theories and variables that indicate relevant relationships to be tested.

Theoretical Framework

This study will be anchored to the Emotional Intelligence Theory of Daniel Goleman (1995) who stated that EI can be learned and applied to achieve goals and help create happier and healthier working environment. Furthermore, this study will be tied to the Self- Determination Theory (SDT) (Ryan and Deci, 2000) which emphasizes that autonomy, competence, and relatedness are the key to have a motivated behavior. Finally, this study will also stand on the Academic Resilience Theory of Wang, Haertel & Walberg (1994) which adhered that despite environmental challenges, an increase in academic success is highly plausible because of academic resilience.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
	Document Title: RESEARCH PROPOSAL		Revision No.	00
			Effective Date	January 26, 2023
			Page	Page 7 of 20

Figure 1.

Conceptual Framework

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

Research Design

This research will utilize the descriptive design, where the researcher does not control or manipulate any of the variables, but only observes and measures them. This is an appropriate method to use when the research aims to identify characteristics, frequencies, trends, and categories (McCombes, 2019). The study will also utilize the causal-comparative method to draw relationships, differences, and conclusions and variables involved in this study.

Respondents

The respondents of this study are the BEED students of CAPSU Pilar enrolled this 2nd semester, A. Y. 2023- 2024 who will be chosen through stratified random sampling.

Time and Place of the Study

This study will be conducted at CAPSU Pilar during the 2nd semester, A. Y. 2023- 2024.

Research Instrument

The socio-demographic profile of the respondents will be collected for in the first part of the questionnaire. Information about their age, sex, civil status, number of siblings, parents'

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
	Document Title: RESEARCH PROPOSAL		Revision No.	00
			Effective Date	January 26, 2023
			Page	Page 8 of 20

occupation, parents' highest educational attainment, and estimated monthly family income will be collected in the first part of the questionnaire.

For the second part, the 12-Item Grit Scale of Duckworth, A. et. al., (2007) will be utilized to collect data on the grit of the respondents. The Grit Scale has the internal consistency of 0.85 (Cronbach's Alpha).

Third part of the questionnaire will be for the data on the emotional intelligence of the respondents which will be collected through Schutte Self-report Emotional Intelligence Test (SSEIT) by Schutte, et. al. (1998), with Cronbach's Alpha of 0.90 which shows good internal consistence and reliable.

The last part of the instrument will be for the data on the academic resilience of the respondents where data would be collected through Academic Resilience Scale (ARS-30) of Cassidy, S. (2016). ARS- 30 has a Cronbach's Alpha on 0.90 which indicated high internal consistency reliability for the global scale.

Data Gathering Procedure

The researcher will construct permission letter to be approved by the Satellite College Director and the Campus Research Chair to allow the conduct of the study. Once approved, the researchers will personally administer the questionnaires to the target respondents. After the questionnaires were answered, those will be collected, and the data will be tallied and analyzed statistically using SPSS software.

Ethical Considerations

The respondents can withdraw their participation anytime in the duration of the collection of data as it is purely voluntary and does not involve any monetary compensation. The data collected and personal information of the respondents will be strictly confidential and will be used for the sole purpose of this research.

Statistical Data Analysis

The data to be gathered from the study will be analyzed using the Statistical Package for Social Sciences (SPSS) software.

Frequency Count and Percentage. Frequency and percentage will be used to determine the number of respondents in every section.

Mean. This tool will be employed in determining the level grit, emotional intelligence, and academic resilience of the respondents.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
	Document Title: RESEARCH PROPOSAL		Revision No.	00
			Effective Date	January 26, 2023
			Page	Page 9 of 20

Standard Deviation. This test is to determine the homogeneity as well as heterogeneity of the scores obtained and of the variables.

The data will undergo normality test (Kolmogorov-Smirnov Test and the Shapiro- Wilk Test). When the data turns out normal, parametric tests will be used. Otherwise, non-parametric.

Pearson r/Spearman's Rho correlation. To determine the relationship of the variables. Pearson r (parametric) or Spearman's Rho (nonparametric) will be used.

t-test/Mann-Whitney U test. For comparison of differences between two groups, t-test for independent samples (parametric) or Mann-Whitney U test will be used.

One-way Analysis of Variance (ANOVA)/Kruskal-Wallis Test. This test, set at 0.05, will be used to determine the significant difference among groups. When the data turns out to be normal, then ANOVA will be used. Otherwise, Kruskal-Wallis test its non-parametric equivalent will be used.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart.

Research Objectives	Feb	March	April	May
1. Distribution of Questionnaire				
2. Analyzing of the collected data				
3. Writing of the final paper				
4. Making of the research output for copyright				

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

The expected output for this study would be the student development programs in the department which will be involving by the faculty and the students. The free- time of the students would be utilized for training, seminar- workshops to improve their grit, emotional intelligence, and academic resilience. With this, the institution will be able to produce holistically strong students and graduates who will be able to face any adversities in life. They would be of top quality which means that they would be a good workforce, especially in the academe. Below is the proposed student development plan for this study:

Proposed Student Development Program	Objectives	Activities

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
	Document Title: RESEARCH PROPOSAL		Revision No.	00
			Effective Date	January 26, 2023
			Page	Page 10 of 20

1. Stress Management Workshop	- To help students recognize stressors and be aware of coping strategies in times of stress, which will help them persevere more in achieving their long-term goals.	Invite experts in stress-management like guidance counselors or stress management consultant to deliver a talk on stress-management and to conduct activities in stress- coping mechanisms.
2. Seminar-Workshop on Improving Emotional Intelligence	- To help students regulate their emotions, develop empathy, and improve their social skills.	Invite a Social and Emotional Learning (SEL) Specialist to talk about improving emotional intelligence. Team building activities will also be conducted.
3. Success in Failure: How to bounce back from failure?	- To equip students with practical strategies and necessary skillset to accept failure, but also in overcoming failure and moving on towards success	Invite a motivational speaker like a Topnotcher in the Licensure Exam who had experienced adversities in his/ her academic life, but managed to overcome those adversities.

(16) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(17) Target Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output)

The target beneficiaries of this research are the teachers and the students of the BEED Department of CAPSU Pilar. For the teachers, they may devise creative strategies to encourage students to be more attentive and competitive when it comes to their academic standing. The teachers may also further understand where the students are coming from and can provide more effective motivation to help them achieve their goals. For the students, this can be

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
	Document Title: RESEARCH PROPOSAL		Revision No.	00
			Effective Date	January 26, 2023
			Page	Page 11 of 20

beneficial to them as through this, they may learn how to improve themselves and to persevere more in their studies.

Dear Respondents,

The researchers are currently conducting research entitled, “GRACE: Grit, Academic Resilience, and Emotional Intelligence of Education Students of CAPSU Pilar. In line with this, we would like to request for your time to fill out the questionnaire for the collection of the data in this study. Rest assured that the data and the personal information asked in this study will be treated with utmost confidentiality and will be used solely for this research.

Respectfully yours,

A.R.C. & L.B.I

Part I. Grit Scale (Duckworth, A., 2007)

Directions for taking the Grit Scale: Please respond to the following 12 items by checking the appropriate column for your response. Be honest – there are no right or wrong answers!

	Very much like me 5	Most likely me 4	Somewhat like me 3	Not much like me 2	Not like me 1
1. I have overcome setbacks to conquer an important challenge.					
2. New ideas and projects sometimes distract me from previous ones.					
3. My interests change from year to year.					
4. Setbacks don't discourage me.					
5. I have been obsessed with a certain idea or project for a short time but later lost interest.					
6. I am a hard worker.					
7. I often set a goal but later choose to pursue a different one.					
8. I have difficulty maintaining my focus on projects that take more than a few months to complete.					
9. I finish whatever I begin.					
10. I have achieved a goal that took years of work.
