(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

Consumers consider various factors when making online purchase decisions. This study aims to assess the relationship of price perception and seller image to online purchase decision among BSBA students of Capiz State University (CapSU) – Pilar Campus in the Philippines. The descriptive research design was employed and utilized a modified questionnaire to gather from randomly selected 85 BSBA students of CapSU-Pilar Campus. Using the mean, descriptive results showed that price perception and seller image are important for effective online purchase decision. Employing Spearman rho, significant relationships were found among price perception, seller image, and online purchase decision. Good price strategy and trusted seller image have greater influence on online purchase decision.

Keywords: Business Management, Price Perception, Seller Image, Online Purchase Decision, SMEs

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

Technological development have a wide impact on various aspects and there is no exemption to the development of the business world and marketing. The Internet has become one of the main tools for marketers in the effort to promote their products. Due to the pandemic, Internet users is growing rapidly and has become the lifestyles of today's society (Hasanat et al., 2020). It certainly raises the idea of the entrepreneurs to make Internet users a potential target to sell or promote their products online. Marketers must be able to influence consumers to choose their products considering many competitors who are also running the same business.

Price perception is one of the factors that influence online purchase decision. Widyastuti and Said (2017) provide evidence that the price is primarily considered by the customers before deciding to buy any products or services. Dib and Alnazer (2013) stated that consumers' assessment is influenced by price besides the product high-quality and retailer attractiveness. The customers are attracted by the price perception whether it a higher price or lower one but with high quality. They also perceive that the high price is related to their perception of the high-quality product they buy with it. Therefore, pricing is also a good strategy so that the companies should increase the customers' perception towards the products of high quality with a high price (Wu et al., 2014).

In terms of online shopping, consumers are increasingly inclined to obtain product information from reviews (Chen et al., 2022). There is an increasing trend for consumers to share their shopping experiences on the network platform (Floh et al., 2013). In response to these trends, a large number of studies (Lackermair et al., 2013; Kang et al., 2020; Chen and Ku, 2021) have investigated the effects of online reviews on purchasing decision. Bae and Lee (2011) concluded that a review from an online community is the most credible for consumers seeking information about an established product and the reputation of the online seller.

The online purchase decision is the final goal of any effort the company wants its customers to make. Kotler, Keller and Armstrong (2012) described that making the customers purchase is a well-established strategy in marketing and consumer literature behavior. They explained that when customers make decisions to purchase, they always involve in a certain process. Pech & Cameron (2006) stressed that the decision to buy a product is based on an information that allows consumers to select products more selectively at reasonable prices.

Relevant studies has been conducted about purchases online by the consumers but there is a dearth of studies specifically intended to college students. The main objective of this study is to determine the significant relationship of price perception and seller image to online purchase decision of BSBA students at CapSU-Pilar.

The findings of the study provided baseline information to SMEs in formulating a proposed marketing plan through Negos-Tulong, the BSBA Extension Program.

(11) Materials and Methods or Methodology (This includes the materials, methods,duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

The study employed a descriptive research design. According to Flores (2016), descriptive research uses a set of scientific methods and procedures to collect raw data and create data structures that describe existing characteristics of a defined target population. In this study, the data regarding price perception, seller image, and online purchase decision were gathered, analyzed, and interpreted. Hence, descriptive design was most appropriate.

Purposive sampling was employed to the selected 85 BSBA students of CapSU-Pilar with online shopping experiences. Table 1 shows that majority of the respondents are young, female, second year student and marketing management major.

Table 1
Profile of the Respondents

Category	f	%
Age		
Young (21 years old and below)	51	60
Old (22 years old and above)	34	40
Sex		
Male	25	29
Female	60	71
Year Level

Third Year	21	25
Fourth Year	14	16
Majoring		
Human Resource Management	39	46
Marketing Management	46	54
Total	85	100

This study utilized a modified survey questionnaire composed of four parts: Part I for selected demographic profile of the respondents, Part II for price perception, Part III for seller image, and Part IV for online purchase decision.

The modified survey questionnaire was subjected to content validity by ten experts who are SMEs owners engaging on online business, using the Content Validity Ratio (CVR) of Lawshe (1975). The CVR result was 0.837 interpreted as valid. A reliability testing was conducted to 30 college students of CapSU-Pilar who are not part of the study. Using Cronbach's alpha, the reliability test results showed 0.988 for price perception and seller image, and 0.911 for online purchase decision. Both are interpreted as highly reliable. In the conduct of the survey, Informed Consent Form from the respondents, and the utmost confidentiality of the data were observed.

The data for the descriptive objectives were analyzed using descriptive statistics such as frequency count and percentange, and mean and standard deviation. In contrast, for inferential statistics, Kolmogorov-Smirnov was applied to determine the normality of the data. The data to measure the

significant relationship between price perception, seller image, and online purchase decision were not normally distributed, hence, Spearman rho was used.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

Level of Price Perception of Respondents

The study determined the level of price perception of respondents as shown in Table 2. The data showed that the respondents price perception is considered "important" ($M = 3.98$, $SD = .33$). Price has a huge impact on marketing effectiveness. When the product is priced lower than the competitors' products, customers are more likely to buy the products. According to Beneke et al (2015), price is a real clue that customers use in their purchasing decisions. Michell (2010) and Kara, et al (2009) suggested that price could be a signal of product quality and represents elegance and status. In comparison with products' situation in the real store, the variety of merchandises and the prices of goods that online shopping provided are more attractive for the consumers generally. Besides, the purposes of comparing the prices with other sellers, time-saving, convenient can be totally achieved with out going outside.

Table 2
Mean, Standard Deviation and Description of Price Perception of Respondents

Category	Mean	SD	Description
A. Entire Group	3.98	.33	Important
B. Age			
Young (21 years old and below)	3.84	.39	Important
Old (above 22 years old)	3.97	.29	Important
C. Sex

Human Resource Management	3.91	.36	Important
Marketing Management	3.94	.31	Important

Level of Seller Image of Respondents

The seller image perceived of the respondents was determined in the study. The result reflected in Table 3. In its entirety, the seller image is considered "important" ($M = 3.89$, $SD = .51$) by the respondents. Trust plays an important role in e-commerce transactions because consumers will not shop online if they do not trust the seller. Consumers decide to purchase online because consumers feel that sellers can be trusted (Putra, Rochman & Noermijati, 2017). Seller image is essential element for building relationship with consumers. Consumers are becoming very anxious and trying to find out the methods of reducing the level of risk when they are perceiving any hazard. The higher of risk that consumer perceive, the more cautious that customer will have to make online shopping decision.

Marketing Management	3.89	.45	Important

Level of Online Purchase Decision of Respondents

The online purchase decision of respondents was also determined in the study. The result is showed in Table 4. In totality, the online purchase decision of respondents is considered “effective” ($M = 3.97$, $SD = .45$). Respondents don’t just decide to buy. Their buying behavior is determined by many different factors. Online shopping process begins with purchasing motivation, which formed by the effects from both internal and external factors. Customer turns into more cautious for the credibility of online stores and the price of goods from other online sellers.

Table 4

Mean, Standard Deviation and Description of Online Purchase Decision of Respondents

Category	Mean	SD	Description
A. Entire Group	3.97	.45	Effective
B. Age			
Young (21 years old and below)	3.89	.35	Effective
Old (above 22 years old)	3.97	.30	Effective
C. Sex

Fourth Year	4.10	.54	Effective
E. Majoring			
Human Resource Management	3.90	.58	Effective
Marketing Management	3.88	.47	Effective

Relationship Between Price Perception and Seller Image and Online Purchase Decision of Respondents

Table 5 shows the results of the Spearman rank correlation. The results of the study indicated that significant relationships occurred between price perception and online purchase decision [$p(276) = 0.869$, $p=0.000$], and on seller image and online purchase decision [$p(276) = 0.664$, $p=0.000$]; therefore, null hypotheses are rejected. The results further revealed that price perception and seller

image have strong positive relationship on the online purchase decision of respondents. Good price strategy and trusted seller image have greater influence on online purchase decision.

Table 5

Relationship between Price Perception and Seller Image and Online Purchase Decision

Variables	Coefficient Correlation	df	p-value
Price Perception and Online Purchase Decision	0.867*	276	0.000
Seller Image and Online Purchase Decision	0.664*	276	0.000

Note: *The difference is significant when $p \leq 0.05$.

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

Price perception have a positive relationship on online purchase decision. This means that consumers consider price as a factor in making purchases. The results of the current study can help SMEs in setting prices in accordance with the products being sold, especially when it comes to fixed price and the relative price policy.

Well-regarded seller image can influence consumers positively and encourage them to buy the product being offered. This means that buying on trusted and honest online seller, consumers feels more confident that they can obtain good and functional products. The results of this research can help SMEs to consider the importance of seller image by addressing customer feedback.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

Proposed marketing plan that can be use as one of the extension activities of Negos-Tulong of the BSBA Department.

IEC Materials of the Proposed Marketing Plan

Research Journal

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.

(17) Acknowledgments (Include only important persons and institutions with involvement in funding and conduct of the research. Justify paragraphs with main headings in caps.)

(18) References (It should include only works mentioned in the text and should be arranged alphabetically. Citations shall not be less than 13 entries. This must follow the APA latest edition format, in hanging indentation with 12-point space in between.)
