(7) Sector/Commodity Education- Social Sciences	(8) Discipline/Field of Specialization English Mathematics
(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)	
The COVID-19 pandemic necessitated an abrupt change in university teacher education, in that most face-to-face courses were replaced by online education, which had a profound impact on students. Pandemic distance learning required students to possess a high degree of self-regulation concerning their learning environment and to find new ways of communicating with their peers and instructors. At the same time, the novel situation offered opportunities to experience new educational applications (Paetsch, J., & Drechsel, B, 2021). The education sector is gradually opening its doors to full blast face-to-face classes after handling the instruction via modular and online learning because of the COVID 19 pandemic. The pre- service teachers of the Bachelor of Elementary Education of Capiz State University- Pilar Satellite were just first year students when they entered the university and on their second semester, the whole country went into lockdown. With the lockdown and the threat of COVID 19 pandemic, the face-to-face instruction was halted and the university shifted into blended learning; modular and online learning; and now they are in their fourth year and they will be deployed soon into their cooperating schools to practice teach. Now that the threat of the said virus is minimal because of the vaccines, the schools from pre-school up to tertiary education are now opening their doors to full blast face-to-face classes. The BEED pre-service teachers will be teaching elementary students after their graduate and this study aims to find out if they are ready to teach even if most of their college years were spent on modular and online learning. This study also aims to find out the impact of the COVID 19 pandemic to their life and their readiness to teach amidst the pandemic. This study is in line with Sustainable Developmental Goals Number 3 Good Health and Well- being and Number 5 Quality Education. With the result of this study, the university and the college can create intervention programs and seminar-workshops that would help the pre- service teachers be fully prepared to teach in the elementary grades after they graduate.	
(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)	
(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)	
This study aims to find out the impact of COVID 19 pandemic to the quality of life and readiness to teach of the BEED pre- service teachers of of CAPSU Pilar. Specifically, this study aims to achieve the following objectives: 1. To determine the quality of life during the COVID19 Pandemic of the BEED pre- service teachers of CAPSU Pilar in terms of physical, mental, social, spiritual, and financial aspect; 2. To determine the readiness to teach of BEED pre- service teachers of CAPSU Pilar in the new normal in terms of content knowledge and pedagogy, diversity of learners and assessment and reporting, curriculum and planning, and community linkages and professional engagement & personal growth and professional development; 3. To determine if there is a significant relationship between the impact of COVID19 pandemic to the life of BEED pre- service teachers of CAPSU Pilar to their readiness to teach amidst the pandemic.	
(11) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.	
This study is anchored to the Quality of Life Theory by Abraham Maslow. Maslow based his theory for development towards happiness and true being on the concept of human needs. He described his approach as an existentialistic psychology of self-actualization, based on personal growth. When one take more responsibility for one's own life, one take more of the good qualities that one have into use, and one become more free,

powerful, happy, and healthy. This study is also anchored to the Theory of Readiness by Edward Thorndike which refers to a preparatory set on the part of the organism to learn. It points out that one learns only when he is physically and mentally ready for it.

(12) Review of Literature/Prior Art Search(Related researchers/activities that have been conducted. State-of – the-art of current technology / information from which the project proposal will take-off).

The emergence of COVID-19 occasioned the shifting paradigm of teaching in schools worldwide to online methods. The script discussed that pre-service teachers in Nigerian Colleges of Education is facing the challenge of integrating technologies into classroom instruction. The article stressed the importance of ICT to achieve quality pre-service teacher education in Colleges of Education. Integrating technologies into pre-service teacher education and the challenges COVID-19 poses to pre-service teacher education was discussed. The author averred that mobile learning through WhatsApp, Facebook, YouTube, and Google Classroom during the COVID-19 would provide sustained education. The conclusion was that teachers and students should explore mobile learning's full benefits through WhatsApp Instant Messaging, Facebook, YouTube, and Google Classroom during the pandemic (Aina, J.K., Olu, A.M., & Adekunle, A.R., 2021).

As teacher candidate, students majoring in English Education is required to take a teaching practice in real classroom setting. However, due to Covid-19 pandemic, the scheme of teaching practice is changed to online setting. It was found that the pre-service teachers were already familiar with the use technology for teaching such as google classroom, Schoology, and Zoom. They mentioned that in terms of pedagogy, they are still uncertain about their readiness because of their lack experience. The study highlighted that the role of supervision in really importance in enhancing pre-service teachers' competencies (Sarini Dewi, Ni Komang, 2021).

In terms of the impact of the COVID-19 pandemic on different countries' education systems many differences exist. This lack of homogeneity is caused by such factors as the start and end dates of academic years and the timing of school holidays. While some countries suspended in-person classes from March/April until further notice, others were less restrictive, and universities were only advised to reduce face-to-face teaching and replace it with online solutions wherever practicable. In other cases, depending on the academic calendar, it was possible to postpone the start of the summer semester.

Fortunately, there is a range of modern tools available to face the challenge of distance learning imposed by the COVID-19 pandemic. Using these tools, the modification of contents that were previously taught face-to-face is easily conceivable. There are however other important tasks in the learning process, such as assessment or autonomous learning, that can still be challenging without the direct supervision of teachers.

All these arguments end in a common topic: how to ensure the assessment's adequacy to correctly measure students' progress. Thus, how can teachers compare students' results if they differ from previous years? On one hand, if students achieve higher scores than in previous years, this could be linked with cheating in online exams or with changes in the format of the evaluation tools. On the other hand, lower grades could also be caused by the evaluation format change or be attributable to autonomous learning as a less effective teaching method (Gonzales, T., et. al., 2020).

In response to the shutdown of schools worldwide, educational institutions adopted distance learning to ensure that students were still getting an education while the world continued to battle COVID-19. This distance learning, which was often achieved through the use of various online resources, was quickly initiated at all academic levels with an uncertain duration. Although many higher education institutions were already familiar with online teaching platforms, most teachers were left with little to no information on how to transition from in-person teaching to distance learning. As teachers, students, as well as their parents, were also unprepared for the transition to online learning. There remains a lack of information currently available to fully understand the exact impacts that distance learning, which extended to more than one year for most students around the world, had on students. Previous studies have shown that the academic performance of children in the United States, for example, had significantly declined throughout the pandemic and that individuals with developmental skills likely halted their progression to improved skills (Cuffari, B. 2021).

Before, home schooling was only for the selected few, but because of the new normal the students must stay and study at home. In the previous school years, the students had to report to school daily to study. Face-to-face learning was considered traditional, which refers to a learning delivery modality where students and the teachers are both physically present in the classroom, and there is opportunity for active engagement, immediate feedback, and socio-emotional development of learners. Due to the pandemic, the schools must adopt to the

			Page	Page 4 of 6

Distant Learning Modalities, Modular Distance Learning, Online Distance Learning, and TV/Radio-Based Instruction. The choice of the learning mode depends on the choice of the parents and the students based on the availability of resources and their convenience. Some learners choose online classes because of the presence of a teacher giving direct instructions. However, online classes have effects on the students' health (The Freeman, 2021).

Results show large negative effects across many dimensions. Due to COVID-19: 13% of students have delayed graduation, 40% have lost a job, internship, or job offer, and 29% expect to earn less at age 35. Moreover, these effects have been highly heterogeneous. One quarter of students increased their study time by more than 4 hours per week due to COVID-19, while another quarter decreased their study time by more than 5 hours per week. This heterogeneity often followed existing socioeconomic divides. Lower-income students are 55% more likely than their higher-income peers to have delayed graduation due to COVID-19. Finally, we show that the economic and health related shocks induced by COVID-19 vary systematically by socioeconomic factors and constitute key mediators in explaining the large (and heterogeneous) effects of the pandemic (Aucejo, E. M., French, J., Ugalde Araya, M. P., & Zafar, B., 2020).

Secretary Briones has pointed out that all the other countries in Southeast Asia, except for Cambodia, have opened their schools. It is very clear that our children must try to remain at par with other countries. Aside from that, several private schools have already opened their classes. The gap in the quality of private and public education in this country is already so wide that any delay in opening of public schools will simply widen that gap in education quality. This gap will lead to gaps in achievements of socio economic classes, since the lower economic classes are the ones mainly attending public schools. Higher education has been thriving in this country and, in fact, all over the world from the rich countries to the emerging economies. This boom was motivated by the belief that a university degree was essential for any success in almost all careers. Throughout the world, the number of young people enrolling in higher education rose from 16 percent of the relevant age group to 38 percent. In the Philippines, the evidence is the most prosperous universities have opened satellite campuses in areas just outside Metro Manila. Campuses and buildings have become one of the status symbols of most universities. There are universities like De La Salle and UP that have even developed university systems with universities located all over the Philippines (Cruz, E.F., 2020).

(13) Methodology(Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

The survey- correlational method will be used in this study. Correlational method involves looking at relationships between two or more variables (Cherry, 2019).

The material which will be used in this research is a survey questionnaire which will be composed of six parts namely: Part I for the demographic profile, Part II for the physical aspect, Part III for the mental aspect, Part IV for the emotional aspect, Part V for the social aspect, Part VI for the work/ financial aspect, Part VII for the spiritual aspect; Part VIII content knowledge and pedagogy, Part IX diversity of learners and assessment and reporting, Part X curriculum and planning, Part XI and community linkages and professional engagement & personal growth and professional development.

The respondents in this study will be the BEED pre- service teachers of Capiz State University, Pilar Satellite College, Natividad, Pilar, Capiz through universal sampling.

The descriptive statistics to be used in the study will be the mean and standard deviation. For the inferential statistics, Pearson r which will be used and will be set at .05 alpha.

(15) Expected Output(Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

Publication- CAPSU Journal
Patent- Not Applicable
Product- Trainings/ Seminar- Workshops
People Services- BEED Pre- Service Teachers, Students, Faculty
Partnership- CAPSU,CHED
Policy- Basis for formulation of the enhancement of the BEED curriculum
Social Impact- the pre- service teachers will have improved self- esteem to teach even in the midst of the pandemic
Economic Impact- high possibility that they will be employed immediately in both public and private elementary schools after graduation

(15) Technology Transfer Activity Design(Indicate the specific products, activity design, processes or services to be transferred as extension activities)

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- PROP-01
	Document Title:	RESEARCH PROPOSAL	Revision No.	00
			Effective Date	November 25, 2019
			Page	Page 5 of 6

After collecting and analyzing the results of this study, trainings/ seminar- workshops will be conducted among the BEED pre- service teachers. The trainings to be conducted will focus on the areas where they are not ready or moderately ready. The trainings/ seminar- workshops will also focus on the aspects of their lives where they were highly impacted by the COVID 19 pandemic.

(16) Targets Beneficiaries(Who the clientele are and what are the expected outcome/effects of the use of the projects output)

CAPSU Pilar BEED Pre- Service Teachers
CAPSU Pilar BEED Faculty

(17) Personnel Requirement

Name	Role (Program,Project, Study Leader)	Field of Specialization
ALITA ROSE B. CANDARE, EdD	Proponent	English
LEIZYL B. IGDANES, MaEd	Co- author	Mathematics

Percent time devoted to the Program/ Project/ Study: 12 Months

Program/Project Leader (in hours):

Program/Project Members (in hours):

(18) Budgetary Requirement

Transportation Allowance- 5,000
Per diem- 5,000
Miscellaneous- 5,000
Materials- 5,000
Documentation, Photocopying, and Printing- 10, 000
English Editor- 5, 000
Statistician- 5, 000
Total- 40,000
