(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

The study was conducted to determine the quality of life and teaching reading of the Bachelor of Elementary Education students of CAPSU Pilar. The respondents of this study were the 47 pre- service teachers of the university. This study employed the descriptive method and a survey questionnaire served as an instrument. The result showed that their spiritual aspect was very highly affected, physical and financial aspects were moderately affected, and mental and social aspects were highly affected. The results also showed that they are ready to teach. Furthermore, the results showed that the mental aspect of the quality of life and teaching readiness in terms of content and pedagogy have positive moderate correlation, and the spiritual aspect of the quality of life and teaching readiness in curriculum and planning have significant relationship.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

practice teaching, new normal, pre-service, pandemic

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

The COVID-19 pandemic necessitated an abrupt change in university teacher education, in that most face-to-face courses were replaced by online education, which had a profound impact on students. Pandemic distance learning required students to possess a high degree of self-regulation concerning their learning environment and to find new ways of communicating with their peers and instructors. At the same time, the novel situation offered opportunities to experience new educational applications (Paetsch, J., & Drechsel, B, 2021).

The education sector is gradually opening its doors to full blast face-to-face classes after handling the instruction via modular and online learning because of the COVID 19 pandemic. The pre- service teachers of the Bachelor of Elementary Education of Capiz State University- Pilar Satellite were just first year students when they entered the university and on their second semester, the whole country went into lockdown. With the lockdown and the threat of COVID 19 pandemic, the face-to-face instruction was halted and the university shifted into blended learning; modular and online learning; and now they are in their fourth year and they was deployed into their cooperating schools to practice teach.

Now that the threat of the said virus is minimal because of the vaccines, the schools from pre-school up to tertiary education are now opening their doors to full blast face-to-face classes. The BEED pre-service teachers will be teaching elementary students after they graduate and this study aimed to find out if they are ready to teach even if most of their college years were spent on modular and online learning. This study also aimed to find out the impact of the COVID 19 pandemic to their life and their readiness to teach amidst the pandemic. This study is in line with Sustainable Developmental Goals Number 3 Good Health and Well- being and Number 5 Quality Education.

This study aimed to answer the following queries; 1)What is the impact of COVID19 Pandemic to the quality of life of the BEED pre- service teachers of CAPSU Pilar, 2) What is the level of teaching readiness of the BEEd pre- service teachers of CAPSU Pilar, and 3) Is there a significant relationship between the quality of life and teaching readiness of the BEED pre- service teachers of CAPSU Pilar?

With the result of this study, the university and the college can create intervention programs and seminar- workshops that would help the pre- service teachers be fully prepared to teach in the elementary grades after they graduate.

(11) Materials and Methods or Methodology (This includes the materials, methods,duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

Since this study is focused on the quality of life and teaching readiness of the Bachelor of Elementary Education pre- service teachers, the descriptive method is the most appropriate method to use. The purpose of employing the descriptive method is to describe the nature of a condition, as it takes place during the time of the study and to explore the cause or causes of a particular condition. The researchers opted to use this kind of research considering the desire to acquire first hand data from the respondents so as to formulate rational and sound conclusions and recommendations for the study. The survey is appropriate in this study because it enables the researcher in formulation of generalizations.

RESPONDENTS

The respondents in this study were 47 BEEd pre- service teachers of Capiz State University, Pilar Satellite College, Natividad, Pilar, Capiz and was chosen through universal sampling.

Table 1. Distribution of the BEEd pre-service teachers according to their profile

Profile	Frequency	Percentage
Sex		
Male	6	12.80
Female	41	87.20
Civil Status		
Single	44	93.60
Married	3	6.40
TOTAL	47	100.00

DATA GATHERING INSTRUMENT

A survey- questionnaire composed of three parts namely, Part I for socio- demographic profile, Part II for quality of life, and Part III for teaching readiness was used to collect relevant data from the respondents.

The respondents in this study were the 47 BEEd pre- service teachers of Capiz State University- Pilar Satellite College, Natividad, Pilar, Capiz and they were selected through universal sampling.

The descriptive statistics used in this study were the mean and standard deviation. For the inferential statistics, the parametric tests were used since the data were determined projecting a normal distribution. Pearson r and t-test were used and was set at .05 alpha to test the relationship.

The following scale was used to interpret the mean for the quality of life of the respondents

Arbitrary Scale	Adjectival Description	Interpretation
4.21 – 5.00 Strongly Disagree	Very Highly Affected	Very Low Quality of Life
3.41 – 4.20 Disagree	Highly Affected	Low Quality of Life
2.61 – 3.40 Somewhat Agree/Disagree	Moderately Affected	Good Quality of Life
1.81 – 2.60 Agree	Not Affected	High Quality of Life
1.00 – 1.80 Strongly Agree	Very Not Affected	Very High Quality of Life

The following scale was used to interpret the mean for the teaching readiness of the respondents

Arbitrary Scale	Responses	Interpretation
4.21 – 5.00	Strongly Agree	Very Ready
3.41 – 4.20	Agree	Ready
2.61 – 3.40	Somewhat Agree/Disagree	Moderately Ready
1.81 – 2.60	Disagree	Not Ready
1.00 – 1.80	Strongly Disagree	Very not Ready

DATA GATHERING PROCEDURE

Before the conduct of this study, the researchers sought the help from the experts to validate their questionnaire. After the questionnaire was validated, the researchers sought the permission of the satellite college director to conduct the study among the students as well as the permission of the research chair. After the approval to conduct the study, the researchers sent their questionnaires to the 47 BEEd pre- service teachers via Google Form. Upon the retrieval of the data, it was tallied, computer- processed, and interpreted using the SPSS software.

DATA ANALYSIS PROCEDURE

The gathered data was subjected to computer-processed using the Statistical Package for Social Science (SPSS) as follows:

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 4 of 7

Mean. This test was used to describe the data on the quality of life and teaching readiness of the BEEd pre- service teachers.
Standard deviation. This test was used to describe the homogeneity and heterogeneity of the variables.

Frequency. This was used to count the number of male and female and the civil status of the respondents.

t-test for independent samples. This test was used to compare the outcomes of two groups on the quality of life and teaching readiness of the respondents.

Pearson's r. This was used to determine if significant relationship exists among means of quality of life and teaching readiness.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

1. What is the quality of life in terms of physical, mental, social, financial and spiritual aspect of the BEEd pre-service teachers of CAPSU Pilar?

Table 2. Quality of life in terms of physical, mental, social, financial and spiritual aspect of the BEED pre-service teachers of CAPSU Pilar

Quality of Life of BEEd Students	Mean	Standard Deviation	Interpretation
Physical Aspect	2.87	0.58	Moderately Affected
Mental Aspect	3.60	0.58	Highly Affected
Spiritual Aspect	4.70	0.29	Very Highly Affected
Social Aspect	3.49	0.34	Highly Affected
Financial Aspect	2.80	0.52	Moderately Affected

Scale: 4.21 – 5.00 Very Highly Affected; 3.41 – 4.20 Highly Affected; 2.61 – 3.40 Moderately Affected; 1.81 – 2.60 Not Affected; 1.00 – 1.80 Very Not Affected

The data on Table 2 showed that the COVID19 pandemic had very highly affected the spiritual aspect of the BEED pre-service teachers (M=4.70, SD 0.29), highly affected their mental aspect (M=3.60, SD=0.58) and social aspect (M=3.49, SD=0.58), and moderately affected their physical aspect (M=2.87, SD=0.58) and financial aspect (M=2.89, SD=0.52).

Based on the result, it can be implied that the COVID 19 pandemic had greatly affected the life of the students especially on their faith which might either be shaken or strengthen because of the deadly virus. Roman, N., et. al. (2020) stated that the COVID experience has caused us to reflect on quality of life, health and well-being and, just as important, end of life. During this time, spiritual care forms a vital component of holistic health management, especially in terms of coping, coming to terms with illness, suffering and ultimately death. The relationship with the transcendent or sacred has a strong influence on a people's beliefs, attitudes, emotions and behaviour. Populations, communities, families and individuals have always found solace through their religious or philosophical beliefs during times of personal adversity and widespread anxiety or disaster. Although spiritual care has always been a part of the domain of religious beliefs, a more contemporary perspective is that spiritual care forms part of the human psyche and thus forms part of human care, health and well-being for families, patients and healthcare workers. Spiritual care deals with the provision of compassion and empathy during periods of heightened stress, distress and anxiety within care.

Their social life was highly affected because of the lockdown which lasted for several months. Suddenly, they were not able to see their peers or their loved ones and they were forced to stay at home, and they were not able to enjoy the freedom to travel or socialize with their friends because of the pandemic. According to the United Nations (2020), the COVID-19 outbreak affects all segments of the population and is particularly detrimental to members of those social groups in the most vulnerable situations, continues to affect populations, including people living in poverty situations, older persons, persons with disabilities, youth, and indigenous peoples. Early evidence indicates that the health and economic impacts of the virus are being borne disproportionately by poor people. For example, homeless people, because they may be unable to safely shelter in place, are highly exposed to the danger of the virus. People without access to running water, refugees, migrants, or displaced persons also stand to suffer disproportionately both from the pandemic and its aftermath – whether due to limited movement, fewer employment opportunities, increased xenophobia etc.

With being forced to stay at home with no one to talk to and being isolated most of the time, this took a toll on their mental aspect. Their mental aspect was moderately affected as it is human nature to socialize and develop strong bond and relationships to others. Javed, B., et. al. (2020) stated that, quarantine and self-isolation can most likely cause a negative impact on one's mental health. A review published in The Lancet said that the separation from loved ones, loss of freedom, boredom, and uncertainty can cause a deterioration in an individual's mental health status. To overcome this, measures at the individual and societal levels are required. Under the current global situation, both children and adults are experiencing a mix of emotions. They can be placed in a situation or an environment that may be new and can be potentially damaging to their health.

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 5 of 7

With their financial aspect being moderately affected by the pandemic, it can be implied that their financial status was still stable although there is a little adjustment because of the loss of their daily allowance or their parents or guardian had lost their source of income but they were still provided with their needs. According to Nicola, M. et.al (2020), the COVID-19 pandemic has resulted in over 4.3 million confirmed cases and over 290,000 deaths globally. It has also sparked fears of an impending economic crisis and recession. Social distancing, self-isolation and travel restrictions have led to a reduced workforce across all economic sectors and caused many jobs to be lost. Schools have closed down, and the need for commodities and manufactured products has decreased. In contrast, the need for medical supplies has significantly increased. The food sector is also facing increased demand due to panic-buying and stockpiling of food products.

Lastly, with their physical aspect being moderately affected, it can be implied that they took care of their physical well-being as a simple cough, cold, and fever were symptoms of the COVID19. It can be implied that they took extra care not to acquire the said virus and had themselves vaccinated to protect themselves from COVID19. According to Park D. and Quising, P (2020), the evidence to date show that people with underlying medical conditions, such as cardiovascular disease, diabetes, chronic respiratory disease, and cancer, face a higher risk of severe illness from COVID-19 (WHO 2020, Huang et al. 2020, Wang et al. 2020, Yang et al. 2020, and Liang et al. 2020). Obesity has also been identified as another major risk factor (CDC 2020). These medical conditions have been identified as lifestyle diseases, which can be prevented by lifestyle changes that include proper diet and regular physical activity.

2. What is the level of teaching readiness in the new normal of the BEEd pre-service teachers of CAPSU Pilar?

Table 3. Teaching Readiness of the BEEd pre-service teachers of CAPSU Pilar

Teaching Readiness	Mean	Standard Deviation	Interpretation
Content and Pedagogy	3.89	0.66	Ready
Diversity of Learners, Assessment, and Reporting	3.84	0.89	Ready
Curriculum and Planning	3.89	0.72	Ready
Community Linkages, Personal Growth and Professional Development	4.08	0.68	Ready
Content and Pedagogy	3.89	0.66	Ready

Scale: 4.21 – 5.00 Very Ready; 3.41 – 4.20 Ready; 2.61 – 3.40 Moderately Ready; 1.81 – 2.60 Not Ready ;1.00 – 1.80 Very Not Ready

The teaching readiness of BEEd pre-service teachers are shown in Table 3. The results indicate that BEEd pre-service teachers are ready in terms of community linkages, personal growth, and professional development (M=4.08, SD=0.68), content and pedagogy (M=3.89, SD=0.66), curriculum and planning (M=3.89, SD=0.72), content and pedagogy (M=3.89, SD=0.66), and diversity of learners, assessment, and reporting (M=3.84, SD=0.89).

Based on the result of the study, it can be implied that the pandemic did not hinder their learning and their self-esteem and that they understood their responsibilities and duties as a teacher. They already have the skills, knowledge, and competencies to teach effectively and how to conduct themselves as a professional teacher. It can be further implied that even though there was no face to face instruction for most of their college years, it did not hinder their preparation and that they were able to adapt well into the blended learning process.

This is in line with the data of Pratiwi, D. H and Rokhyati, U. (2021) which stated that many factors affect a teacher's success in teaching students. One of the crucial factors is the mastery of learning materials. Therefore, it is a must for a teacher to master the learning materials. The student teachers are too. They need to master the materials they are going to teach at school. Student teachers have done the microteaching and taken subjects related to requirements to be teachers. Although based on the questionnaires and test, the findings of this research show that student teachers' mastery of learning materials is good, based on the interview result with the microteaching person in charge; their mastery of learning materials still need improvement. The students' teachers are ready to practice teaching from learning material mastery, although some improvement is required.

3. Is there a significant relationship between the quality of life and teaching readiness of the BEEd pre-service teachers of CAPSU Pilar?

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 6 of 7

Table 4. Test of relationship between quality of life and teaching readiness of the BEEd pre- service teachers of CAPSU Pilar

Quality of Life	Teaching Readiness			
	Content and Pedagogy	Diversity of Learners, Assessment and Reporting	Curriculum and Planning	Community Linkages, Personal Growth, Professional Development
Physical Aspect	r= 0.242 Sig.=0.101 N=47	r= 0.186 Sig.=211 N=47	r= 0.172 Sig.=0.249 N=47	r= 0.254 Sig.=0.085 N=47
Mental Aspect	r= 0.483* Sig.=0.049 N=47	r= 0.062 Sig.=0.680 N=47	r= 0.090 Sig.=0.546 N=47	r= 0.193 Sig.=0.195 N=47
Spiritual Aspect	r= 0.178 Sig.=0.230 N=47	r= 0.285 Sig.=0.052 N=47	r= 0.309* Sig.=0.034 N=47	r= 0.236 Sig.=0.110 N=47
Social Aspect	r= 0.074 Sig.=0.621 N=47	r= 0.101 Sig.=0.500 N=47	r= 0.103 Sig.=0.491 N=47	r= 0.154 Sig.=0.300 N=47
Financial Aspect	r= -0.016 Sig.=0.914 N=47	r= 0.111 Sig.=0.457 N=47	r= 0.015 Sig.=0.920 N=47	r= 0.049 Sig.=0.743 N=47

* $p < 0.05$

The result of the relationship of quality of life and teaching readiness of BEEd pre-service teachers are shown in Table 4. The results showed that mental aspect of the quality of life and teaching readiness in terms of content and pedagogy have positive moderate correlation ($r=0.483$, $p\text{-value} = 0.049 < 0.05$). This means that mental aspects and content and pedagogy of BEEd pre-service teachers tend to increase together. This is in line with the study of Jimenez, E.C., 2021 as cited from Gustems-Carnicer et al., 2019 which stated that teachers should be given ample space to be relieved from stress through coping strategies and improve themselves as indispensable catalysts of the academic environment. Like other professionals, teachers experience stress and use avoidance of coping strategies, affecting their performance in the workplace. It is important to recognize and address the harmful effects of stress on well-being and academic achievement, to avoid long-term problems in professional and personal life.

The mental health wellness of teachers provides learner's a positive learning and development experience through school-based mental health services (Jimenez, E.C., 2021).

Teachers must develop a range of knowledge bases, skills and competencies. Importantly, they need pedagogical content knowledge (PCK). PCK is the difference between knowing something, and knowing how to help others understand it. PCK includes students' misconceptions and thought processes, instructional strategies, the curriculum and assessment strategies. Teachers with PCK know what makes a concept tricky to understand, how best to exemplify things, how to explain concepts and how to break down barriers to students' understanding David Read and Niki Kaiser (2020).

Through this result, it can be implied that the stronger the mental health of the pre- service teachers they can teach the students at their best through the strategies they may develop along the way.

Another variables which had significant relationship were the spiritual aspect of the quality of life and teaching readiness in curriculum and planning of BEEd pre-service teachers. These variables have statistically significant relationship ($r=0.309$, $p\text{-value} = 0.034 < 0.05$). Thus, as the quality of life in terms of spiritual aspect increases, the teaching readiness of BEEd pre-service students in terms of curriculum and planning also increases. The result of the study is line with the result of the study of Nasrollahi, Z., Eskandari, N., Adaryani, M. R., & Tasuji, M. H. H. R. (2020) which stated that the factors influencing the spiritual transfer in teaching process were classified into two main forms of teacher-related factors and peripheral-related factors. Teacher-related factors include the teacher's insight and worldview, adherence to religious principles, belief in ethical virtues, the positive and constructive interaction of the teacher with the student, and the mastery of teaching skills. The peripheral-related factors include the highly skilled classrooms and the talented learners.

With this result, it can be implied that the stronger the faith of the pre- service teachers, the better they can determine the needs of their students and plan out to address these needs through different activities and assessments.

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate hedings if they are long. Justify paragraphs with main headings in caps.)

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 7 of 7

In consideration of the relevant findings of the study, it can be concluded that the COVID19 pandemic had very highly affected the spiritual aspect of the BEEd pre- service teachers. The pandemic had also highly affected their mental and social aspect, and their physical and financial aspects were moderately affected. Furthermore, it can be concluded that the mental aspect of the quality of life and teaching readiness in terms of content and pedagogy have positive moderate correlation, and the spiritual aspect of the quality of life and teaching readiness in curriculum and planning have significant relationship.

Based on the findings of the study, it is recommended that the university should debrief the students on the impact of the COVID19 Pandemic on their lives. The university should assess how the pandemic affected them individually and how great the impact to them was. Their lived experiences during the peak of the onslaught of the coronavirus should be processed so that it will not become a trauma to them. The university should assist the students on how to go back to their normal lives as college students through workshops and recreational activities.

Furthermore, the pre- service teachers should undergo thorough trainings and seminar-workshops on how they would deal with the pupils, manage the classroom, and formulate effective and efficient teaching strategies in the new normal set- up.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.)
Journal

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.

(17) Acknowledgments (Include only important persons and institutions with involvement in funding and conduct of the research. Justify paragraphs with main headings in caps.)

First and foremost, the researchers would like to thank the Almighty God for His guidance and provision in the completion of this study. The researchers would also like to thank to Jennifer P. Benlir, DPA, Satellite College Director, for her support during the onduct of this study. The researchers would also like to thank Philomel Innocent P. Obligar, MAT, Research Chair, for his encouragement in the completion of this study. Heartfelt thanks is also extended to the BEED preservice teachers for their cooperation who served as respondents of this study; to the faculty and staff of CASPU Pilar and to the family of the researchers, greatest gratitude is extended.

(18) References (It should include only works mentioned in the text and should be arranged alphabetically. Citations shall not be less than 13 entries. This must follow the APA latest edition format, in hanging indentation with 12-point space in between.)
