(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

Pedagogical innovations are derived when there is a need to change educational practices to address the change and trend in the teaching process. The gradual shifting from during to post pandemic periods brought a sensible number of concerns and changes in terms of approach and strategies in order to provide quality learning experience. Thus, this study focused on the pedagogical innovations initiated by the faculty to address teaching experiences during the post-pandemic. Qualitative research was used in the conduct of the study during S.Y. 2022 - 2023 using the thematic analysis of Clarke and Broun (2006). Participants of this study were the 15 faculty from Capiz State University. Data was gathered using in-depth interview. This study found several themes in terms of teaching experience in the post-pandemic: a significant increase in technical / technological knowledge among faculty, a notable increase of interaction with students both physically and virtually, managing challenging student behaviors, limited resources for hybrid classes, and anxiety regarding the risk of infection. In terms of pedagogical innovations, the following themes are derived: inclusive e-learning, continue utilizing their online classrooms and other educational online platforms, creating and sharing of digital materials and references, and strengthening students' school support system. For long term adoption, the following pedagogical innovations were considered: continued utilization of online classrooms and other educational online platforms and digitization of instructional materials and references to ensure instructional delivery.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

Pedagogical innovations, post-pandemic, qualitative research

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews):

Pedagogical innovations in the post-pandemic have generally looked into teachers' preferences in another change, the gradual shift from online classes to in-person classes. Naturally, to advance in the technology dominated instruction, teachers re-immersed, retooled, and relearned technology related skills to help them cope and to push them to continue to provide quality instruction. Thus, pedagogical innovations nonetheless became an eventual output among many teacher-innovators. Innovations in education are intended to raise productivity and efficiency of learning and/or improve learning quality.

According to Ashour et al. (2021), the Covid-19 pandemic has presented an opportunity for rethinking assumptions about education in general and higher education (HE) in particular. Although visions for the future of Higher Education vary and are contested, there is a growing consensus that 'nothing could be worse than a return to normality' (Roy 2020). Notwithstanding the lack of preparation and difficulties faced by teachers, educational administrators and institutions, the overall picture now reveals an openness towards innovation and new learning opportunities that were not as evident before. In the light of the general crisis the pandemic caused, especially when it comes to the so-called emergency remote teaching (ERT) (Hodges et al. 2020; Xie and Rice 2021), educators from all grades and contexts experienced the necessity of rethinking their roles, ways of supporting students' learning tasks (Rodríguez-Triana et al. 2020; Nordmann et al. 2020) and the image of students as self-organising learners, active citizens and autonomous social agents (Council of Europe 2016, 2018). This shift requires new learning, not only for students but in particular for teachers. As Hollander (2021) intelligently remarks, 'the pandemic is taking higher education back to school'

The introduction of more progressive methods, the use of active teaching forms, and new training technologies are regular spheres of innovation. Genuine innovations emerge from new knowledge of the processes of human

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 3 of 10

development, providing new theoretical approaches and practical technologies for achieving optimal results. Pedagogical innovation demands the replacement of educational paradigms into a more progressive one.

Thus, in the onset of post pandemic teaching, there is a need to explore the various teaching experiences of teachers to see how they switched from during pandemic practices to post-pandemic practices and the adjustments they incurred in the form of pedagogical innovations.

Thus, this study was pursued.

Generally, this study determined pedagogical innovations initiated by the faculty to address their teaching experiences during the post-pandemic.

Specifically, the study sought to answer the following:

1. What are the post-pandemic teaching experiences of the faculty?
2. What pedagogical innovations did the faculty initiated to address their teaching experience during the post-pandemic?
3. What pedagogical innovations may be considered for long-term adoption? Why?

(11) Materials and Methods or Methodology (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

RESEARCH DESIGN

This study utilized a qualitative research design employing thematic analysis methods. Qualitative research is a type of social science research that collects and works with non-numerical data and that seeks to interpret meanings from these data that help one to understand social life through the study of targeted populations or places. It allows the researcher to investigate the meanings that people attribute to their behavior, actions, and interactions with others (Crossman, 2019). Thematic analysis is a method for identifying, analyzing, and reporting patterns (themes) within data. It minimally organizes and describes your data set in (rich) detail (Clarke and Braun, 2006). It focused on the experiences and pedagogical innovations of the faculty during the post-pandemic in school year 2022-2023.

PARTICIPANTS

Participants of this study were the 15 faculty from Capiz State University. They were identified using the following inclusion/ exclusion criteria;

1. Must be a regular faculty of Capiz State University.
2. Has been teaching in the university for 5 or more years.
3. Handling 15 units or more during the last 2 years of service

INSTRUMENT

An in –interview guide was prepared, validated and utilized in gathering data through an in–depth interview. In-depth interviews are a qualitative data collection method that involves direct, one-on-one engagement with individual participants. This interview guide was validated by 3 experts on the field of education.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

Post-Pandemic Teaching Experiences of the Faculty

The post-pandemic had presented a variety of teaching experience among the faculty. Results reflects that there is a significant increase in technical / technological knowledge among faculty. This could be attributed to the fact that teachers have immersed themselves in learning how to effectively manipulate the online classrooms,

	Document Type:	Document Code	RES- CR-01
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 4 of 10

conferencing and utilizing other applications to enhance their digital literacy skills and promote effective learning environment. As R₍₁₎ said, “I had a lot of bloopers and good laughs with students as I have a lot of mistakes and pressing wrong buttons during our classes. In the end, I learned a lot and can now easily share my presentations to my students.” The result is supported by the study of Benito, et.al (2021) which shows high satisfaction with the emergency remote delivery and clearly reflects the relevance of enhancing the digital components of future learning experiences in higher education and a unanimous preference for hybrid education.

Another, there is a notable increase of interaction with students both physically and virtually. Taking into consideration the full swing of the limited face to face for laboratory subjects and dry run of full face to face in some campuses, students’ concerns are now speedily addressed since they can physically visit their teachers. Likewise, their online communication with their teachers help facilitate their other needs and concerns. Also, due to in-person classes, students’ interaction is ensured.

Further, another experience is on managing challenging student behaviors. This could be deduced from the varied online student-teacher conversations where there are instances showing students being impolite or discourteous. It could be derived from how they phrase their inquiries and the punctuations used in the message. It could be ascertained that students may have lack the appropriate online communication netiquette as they were used to communicate with classmates and friends and not with teachers back then. R₍₃₎ shared that, “students thinks were just pals when they try to communicate with us and wants immediate response. They message any time of the day and even late at night.”

Another experience teachers encountered in the post pandemic is the limited resources for hybrid classes. The limited in-person classes have encouraged the use of hybrid classes, a simultaneous instruction with in-person class and online class. However, the provisions for gadgets and internet connectivity is poor, making it difficult for teachers to conduct hybrid classes. This is supported by the study of Benito, et.al (2021) that COVID-19 has had terrible consequences; however, the pandemic has brought along some positive effects and improvement opportunities in higher education, and, if the results of the present study are any indication, the future of face-to-face higher education should be hybrid.

Another experience of teachers in the post-pandemic is on students’ academic performance. This may be an outcome of independent and no in-person supervision of students’ activities and the pondering question regarding the authenticity of students’ outputs and performance during the online and modular classes. Students’ may also be in the period of adjustment from the asynchronous to in-person with time requirement for submission. R₍₄₎ related that, “students are quite complaining when they are given multiple activities or outputs especially if there are set deadlines and more than one subject.”

Lastly, among the experiences of the teachers in the post-pandemic is the anxiety regarding the risk of infection. Although, it is already in the post-pandemic stage, the lingering fear of Covid-19 infection remains a threat to teachers. Thus, teachers may feel unsafe with the influx of in-person classes and vice-versa.

Problem	Codes	Emergent Themes
1. What are the post-pandemic teaching experiences of the faculty?	- Improved skills in technology - Had a hard time in using gadget but eventually learned them - Had ask help from peers and students in using platforms - Student participation increased students - Students join in the discussion	- Technical/technological knowledge among faculty - Notable increase in interaction with students both physically and virtually - Managing challenging student behaviors - Limited resources for hybrid classes - Students’ academic performance

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	
			Page	Page 5 of 10

- Not very sure of the authenticity of students' output
- Impolite students orally and online
- Respect for teachers' time
- Students who do not participate in class discussion
- Students do not have load
- Students do not have gadgets
- Internet connectivity
- Adjusting to in-person activities
- Time management in finishing multiple activities given by teachers
- Students cannot submit activities on time
- Fear of Covid – 19
- Cannot sleep well because of the current situation
- Anxiety regarding the risk of infection

Pedagogical Innovations Initiated by the Faculty to Address Teaching Experience in the Post-Pandemic

During the post-pandemic, teachers began to repackage and modify their pedagogical practices to fit the changes and adjustments of the after-Covid instructions. Among the pedagogical innovations highlighted is inclusive e-learning. This initiative addresses the continuous online classes, hybrid and blended classes due to limited in-person classes. This represents the commitment of teachers to ensure that all students learning circumstances are being considered. On Ashour (2021) supported that this shift will be driven by the investments the universities have made in distance education and the increased familiarity of the students, staff and institutions with e-learning. The study participants foresee that more sophisticated forms of hybrid campuses will be a more appropriate model for the future, if face-to-face (F2F) classrooms do not return.

Although, limited in-person classes and full face to face classes in the different campuses are being adopted, teachers opted to continue utilizing their online classrooms and other educational online platforms. This means that teachers will still maintain their online classrooms for communication, tracking of students outputs, quizzes and other examinations and performances. Schaus (2022) stated that through a series of remote technology workshops, reflective collaboration, and focus groups, many faculty identified new approaches using technology that they will continue to incorporate into instruction post-pandemic while still maintaining the face-to-face instruction that is highly valued at. Institutions.

Next is creating and sharing of digital materials and references. Teachers find it expedient to continue creating and sharing digitized materials and references in their groups and online classrooms to keep students guided with relevant materials for their respective subjects. This indicates that teachers are giving students opportunities to explore different materials and references related to their classes.

Lastly, strengthening students' school support system. This initiative encompasses peer groups and teachers' support. It is intensifying teacher-student interactions and student-student interaction to address the students' needs. This also includes student activities, teacher's supervision and other pro-student concerns.

Dayagbil, et.al (2021) supports this study stating that the emerging themes were identified from the qualitative responses to include the trajectory for flexible learning delivery, the role of technology, the teaching and learning environment, and the prioritization of safety and security.

Problem	Codes	Emergent Themes
2. What pedagogical innovations did the faculty initiated to address their teaching experience during the post-pandemic?	• Use online platforms for managing student activities • Use online to maintain connection with students • Crafting modules for students • Use updated reference • Use digitized IMs • Use playlist and other material found online • Constant monitoring of students • Create peer groups for review and school activities • Provide activities that encourages students of communicate to one another • Schedule a consultation time so students can communicate with teachers and clarify matters	What pedagogical innovations did the faculty initiated to address their teaching experience during the post-pandemic?

Pedagogical Innovations Considered for Long-Term Adoption

Among the pedagogical innovations, results reflect the following for long adoption: Continued utilization of online classrooms and other educational online platforms because it ensures that classes will be conducted and supervised by the teachers in case teachers are in seminars or having other functions and students' outputs and activities will be preserved digitally and easily tracked.

Dayagbil, et.al. (2021) further supports this study that to ensure teaching and learning continuity, it is concluded that higher education institutions have to migrate to flexible teaching and learning modality recalibrate the curriculum, capacitate the faculty, upgrade the infrastructure, implement a strategic plan and assess all aspects of the plan.

Another one for long-term adoption is creating and sharing of digital materials and references. This will benefit the students immensely since all instructional and reference materials will be digitized and downloadable which means that students can have it on their phones and other gadgets for easy retrieval and use.

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	
			Page	Page 7 of 10

Problem	Codes	Emergent Themes
3. What pedagogical innovations may be considered for long-term adoption? Why?	• Use of google classroom • Use of facebook social learning • Create digital materials • Use of video or video clips • Use of playlist from reliable resources • Use of powerpoint presentation / canva in presenting lessons	• Utilization of online classrooms • Creating and sharing of digital materials

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

Conclusions

1. Teachers' teaching experiences in the post-Covid 19 pandemic is still an extension of their "during pandemic experiences." Thus, their experience is influenced by their established routines in their online classes and is slightly altered with the inception of limited to full in-person classes. Most notable is that, although the shift now is from online classes to flexible to hybrid classes and now in-person classes, teachers are still willing to take on the advantages of online classrooms along with its other features as additional strategy.

2. Teachers' pedagogical innovations is centered on utilizing the best assets of online learning in the in-person classes to include inclusive borderless classes, digitized materials and pro-student support systems. Thus, there is an adaptive behavior among teachers which signifies that the skills they acquired while being engaged in online classes, is now an innovation applied in the post-pandemic in-person classes.

3. Significantly, teachers considered for long-term adoption are those highly connected with technology as such, maintaining online classrooms and digitization of instructional and reference materials. This might have emerged from their drive to keep an intact repository or portfolio of students outputs, examinations, performances and materials for easy tracking and monitoring purposes.

Recommendation

Continuous capacity training for digital literacy and other online platform applications may be considered as long-term faculty development engagement to ensure that faculty are kept abreast with the rapid changes in the online applications of different platforms to maximize its usage in the delivery of instruction.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.
