(1) Research Program/Project/Study Title: Impact Assessment of the Extension Programs of Capiz State University-Dayao Satellite College (PICTURES)	
Proponent Name:	Engr. Zandro A. Amanguiton
Academic Rank:	Assistant Professor I
Co-Authors (with academic rank):	Engr. Rio L. Vergabera
Campus/Satellite College/Address:	Dayao Satellite College
Telephone/Cell Phone/Fax Number:	09176232670
E-mail Address:	zaamanguiton@capsu.edu.ph

Program or Project has component (if no proceed to 2)? ☒ Yes ☒ No

Component Title:	Promote Information and Communications Technology by Undertaking Research and Extension Services
Component Leader:	Engr. Zandro A. Amanguiton
Academic Rank:	Associate Professor I

(2) Category (please check) ☒ Social Science/Education /Humanities & other related fields ☐ Natural/Biological Sciences ☐ Food Research/ ☐ Developmental/ Computer/Engineering/ Architecture ☐ Extension ☐ Poster		(3) Research Center [Check the concerned center] ☒ SSITRDC Social Science and Industrial Technology Research Development Center ☐ LRDC Livestock Research Development Center ☐ FFRDC Fisheries and Food Research Development Center ☐ CSRDC Crop Science Research Development Center							
(4) Site of implementation Capiz State University (All campuses)									
Municipality/City:									
Province:		Capiz							
Region:		VI

(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

One of the four foundational responsibilities that SUCS requires to be carried out is the provision of extension and community services. According to this theory, education will benefit from a balance between the four primal purposes of instruction, research, extension, and production. The academic community shares and transfers technology-based outputs to the community through extension efforts in order to benefit and improve the beneficiaries' economic circumstances.

Various sectors use impact evaluations to evaluate the possible benefits and drawbacks of a plan or implementation for the environment and society (in this example, the community outreach initiatives of the institution). Every industry, including construction, agriculture, and services, can benefit from impact assessments.

The extension services of Capiz State University provide community assistance programs as a way to engage with how they go about living their daily lives. The ideal tool for this research is the Socio-Economic Impact Assessment Tool (SEIA), which may be used to measure the consequences of the extension operations.

Through its banner program titled PICTURES (Promote Information and Communications Technology by Undertaking Research and Extension Services) for Bachelor of Science in Computer Science, the extension services office of Capiz State University Dayao Satellite College aims to help the various sectors of society by supplying knowledge, skills, and competitiveness to improve the quality of life for all.

As one of the indicators that the program achieves its goal of "assisting the different sectors of the society by providing with knowledge and skills /competitiveness to improve the quality of life," evaluating the impact of the extension activities will allow the researchers to ascertain the impact of the training conducted and whether it improves the lives of the trainees. Results will also be helpful in identifying the gaps which will lead to re-assessing the extension plans.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

This study will utilize the descriptive-correlation research design. The dependent variables in the study are the recipients of training in Don Ynocencio R. Del Rosario Memorial School (DYDRMS), Roxas City last September 2017. The study will be conducted in Roxas City during the last quarter of the Fiscal Year 2022-2023. The respondents of the study are recipients of skills training in Word, Excel, Powerpoint, and the use of the Internet.

The survey questionnaire will be used to gather data. A questionnaire is composed of 2 parts: Part I was for the socio-demographic profile; Part II was for the impact of the extension activities conducted by the department. Data gathered will be analyzed using frequency count, mean, and percentage.

			Page	Page 3 of 7

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

This study will be conducted to determine the impact of the extension programs conducted. Specifically, it aims to answer the following questions:

1. What is the socio-demographic profile of the respondents?
2. What are the impacts of the extension activities conducted in terms of socio-economic, computer literacy, and productivity?
3. What are the challenges and problems encountered by the Department and the respondents in the implementation of the program?

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of -the-art of current technology / information from which the project proposal will take-off).

Information gathered from on-line references which provided the researchers with facts and data used to support claims in this study.

The regulatory requirements for any new project that is larger than a specific size generally include (environmental) impact evaluations. (See Dornbrack, Haye, and Vis, 2014). These evaluations could then be put to use to suggest new or improved extension programs that could help the Capiz beneficiaries' socioeconomic standing advance. Social impacts, as defined by the International Committee on Guidelines and Principles for Social Impact Assessment (ICGPSIA), are the effects that a group of people suffers as a result of governmental or private actions. They specifically stated that it is a change in how people interact with one another, arrange to meet their needs, live, work, and play in society.

Thus, in order to fully determine these elements should be given importance.

The process of analyzing, monitoring, and managing the intended and unintended social consequences—both positive and negative—of planned interventions (policies, programs, plans, projects), as well as any social change processes sparked by those interventions, is known as the social impact assessment (SIA). Its main goal is to create a more sustainable and just environment for humans and other living things (IAIA 2003).

UNEP (2002, subject 13) defines the SIA as identifying the effects on people of any proposed action that alters how they live, work, interact with one another, organize themselves, and function as both individuals and members of society, with a focus on minimizing negative or unintended effects.

This concept takes into account social-psychological changes, such as those in how people view themselves, their surroundings, and their community. The main social consequences brought on by these project-related changes can be categorized into five overlapping areas, according to UNEP's subject 13:

- How a person's lifestyle affects how they interact with their friends, family, and coworkers on a daily basis;
- Cultural influences—on common traditions, obligations, values, language, religious convictions, and other characteristics that distinguish one social or ethnic group from another;
- Effects on infrastructure, services, nonprofits, networks of activities, and cohesion within the community;
- How amenities and quality of life affect hopes for the future, feeling of place, aesthetics, heritage, and sense of belonging;
- Health impacts—on mental, physical, and social well-being, though health impact assessments also cover these areas. The definitions of the SIA and socio-economic impact analysis are fairly similar (SEIA). Sometimes there is a mix of these assessment styles. However, it is evident that both social and economic implications are examined in a proper SIA.

6. Data Analysis												
7. Research paper writing												
8. Colloquim/Defense												

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

The results of the research study will provide valuable insights into revisiting the department's Extension, Strategic, and Sustainability Plans.

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

- Extension and Catch up Plans
- Training Designs
- Strategic and Sustainability Plans

(16) Targets Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output)

The Office of the Extension Chairperson and the Computer Studies Department Research and Extension Office will benefit from the results of the study. The assessments will provide fact-based, data-driven decision-making for streamlining the research and extension programs

(17) Personnel Requirement

Name	Role (Program,Project, Study Leader)	Field of Specialization
Zandro A. Amanguiton	Project Leader	ICT
Rio L. Vergabera	Study Leader	ICT

Percent time devoted to the Program/ Project/ Study

Program/Project Leader (in hours):

Program/Project Members (in hours):

(18) Budgetary Requirement

	Counterpart Funding	Other Funding	TOTAL
I. Personal Services Salaries/ Honorarium			
II. Maintenance and Other Operating Expenses			
A. Direct Cost
