	☐ Collaborative Research (external agency)
(7) Sector/Commodity	(8) Discipline/Field of Specialization Social Science
(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.) The main purpose of this study was to conduct a survey on the employment profile of the graduates after they obtained their teacher education degree at Capiz State University – Dayao Satellite College and to gather employer’s feedback. Descriptive research design was utilized. The study was conducted during the academic year 2021-2022. In collecting the data, the graduate tracer study questionnaire from CHED was utilized. To help analyze and interpret the gathered data, frequency count and percentage mean was used. Majority of the respondents were single, females, lived in the city, from batch 2018, and were regular/permanent employees. (9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.) <i>Graduate, Tracer Study, Teacher Education, Employer’s Feedback</i>	
(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews) At present, there is a growing number of graduates who do not possess relevant skills needed in the labor market which, ultimately, lessen their chances to land a job. This becomes a concern for many Higher Education Institutions since enhancing the skills of the students and preparing them for the working world are one of their goals. With this in mind, conducting a graduate tracer study will be relevant to every HEIs since results may be used to further develop their programs as well as the institution in general. Tracer study is an approach which is widely used in most organizations especially in educational institutions to track and to keep record of their students once they have graduated from the institution. It is the follow up of graduates of higher education or institutes. Its aim is to evaluate one's progress up to the time he or she gets a job. Graduate tracer studies are one form of empirical study that can appropriately provide valuable information for evaluating the results of the education and training of a specific institution of higher education [1]. It can collect essential information concerning the employment profile of graduates [2], their undergraduate experience, the first and current jobs of graduates [3], and the relevance of their educational background and skills required in their job. Graduate tracer study can also collect data on the relevance of the curriculum [4] and graduates’ level of satisfaction of their academic preparation [5]. By obtaining this kind of information the Teacher Education Department of Capiz State University Dayao Satellite College can show the success of its educational efforts pertaining to its graduates, and employers. Strategically, the institution can identify areas for growth and development in the context of quality assurance and the provision of relevant preparation and training. Any possible deficits in its program offerings in terms of administration, content, delivery and relevance can be ascertained and improved. By conducting a survey on the cohort of graduates from a specific institution, profession, discipline, level of education, their employment characteristics, competencies and skills development, and have a

			Page	Page 3 of 11

comparative analysis, the information gained from these can be used by the graduate's alma mater and other education stakeholders for curriculum development and other emerging reforms.

The main purpose of this study is to conduct a survey on the employment profile of the graduates after they obtained their teacher education degree at Capiz State University – Dayao Satellite College and to gather employer's feedback. Specifically, it sought to answer the following questions: 1. What is the socio-demographic profile of the respondents? 2. What is the employment status of the graduates? 3. What is the transition time from graduation to employment? 4. What is the employer's feedback on the graduates' work performances in the workplace?

(11) Materials and Methods or Methodology (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

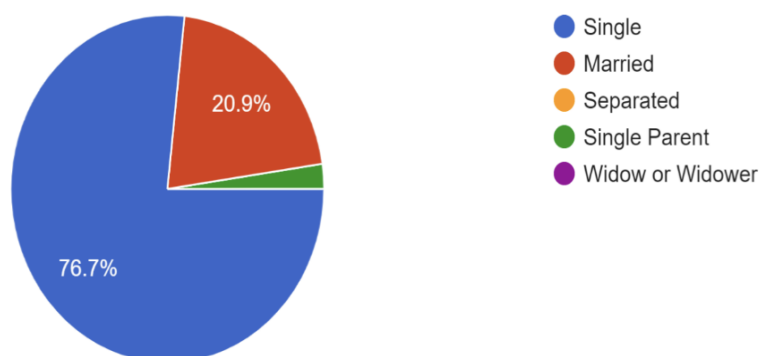

Descriptive research design was used in the study. The respondents were graduates of Capiz State University Dayao Satellite College, Teacher Education Department for academic year 2016-2020 as well as the employers where the graduates were employed during the conduct of the study. The data was gathered using two sets of questionnaires. Set A of the questionnaire was patterned from the Commission on Higher Education (CHED) standardized form. It comprised the following categories: (a) General Information; (b) Educational Background; (c) Training(s)/Advance Studies attended after college; and (d) Employment Data. Set B was the Employers' Feedback questionnaire which was adapted from the TESDA Employers' Feedback Survey.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

CIVIL STATUS

As shown on the graph, 76.7% of the respondents were single, 20.9% were married and 2.3% were single parents. This implied that the majority of the respondents were single.

Table 1. Civil Status of the respondents

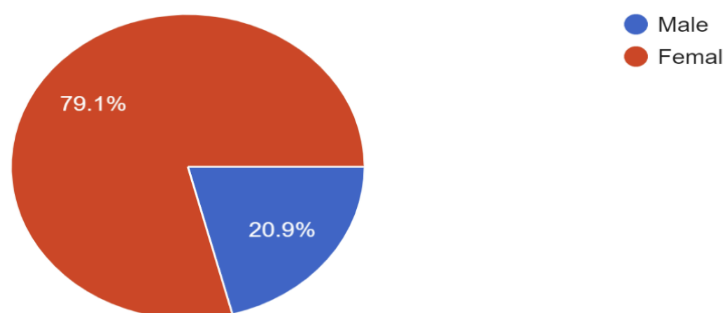

SEX

	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 4 of 11

As seen on the graph, 79.1% of the respondents were females and 20.9% were males. This would imply that the majority of the respondents were females.

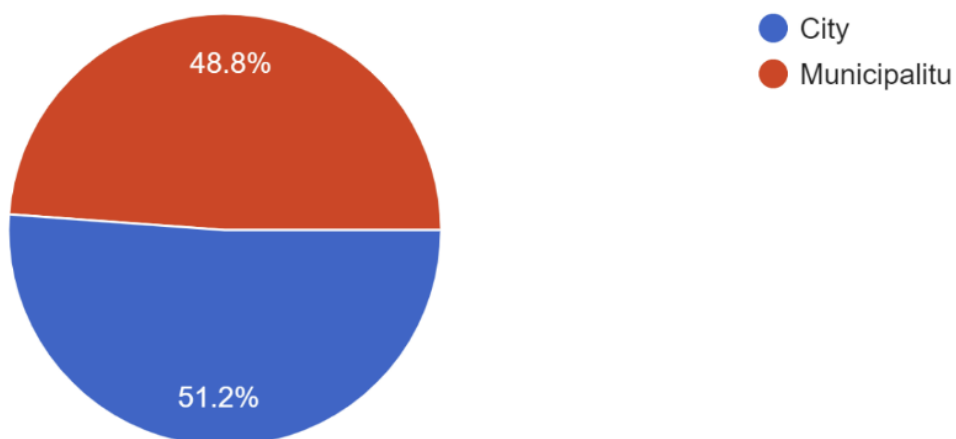

Table 2. Sex

LOCATION OF RESIDENCE

Based on the graph, 51.2% of the respondents were located in the city while 48.8% were located in the municipality. This implied that the majority of the respondents lived in the city.

Table 3. Location of Residence

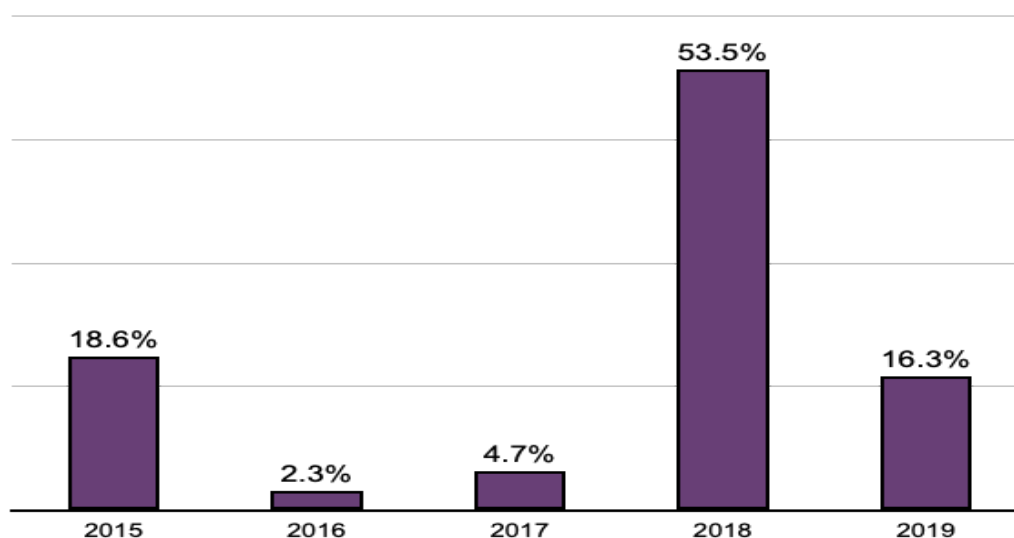

YEAR GRADUATED

	COMPLETED RESEARCH	Page	Page 5 of 11

As shown on the graph, 53.5% of the respondents graduated in the year 2018, 18.6% graduated in the year 2015, 16.3% graduated in the year 2019, and 4.7% graduated in the year 2017. This would imply that the majority of the respondents graduated in the year 2018.

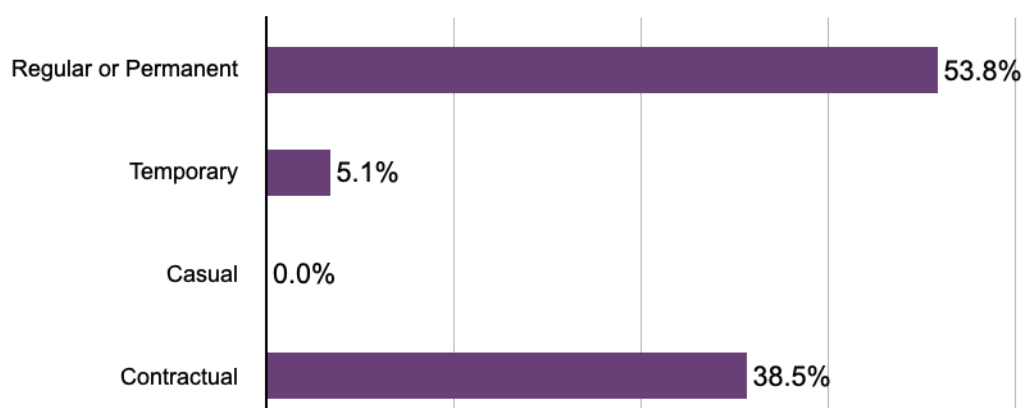

Table 4. Year Graduated

PRESENT EMPLOYMENT STATUS

The graph shows that 53.8% of the respondents are regular or permanent employees. On the other hand, 38.5% of the respondents are contract employees and 5.1% are either temporary employees or self-employed. This would imply that the majority of BEEed program graduates are full-time employees of the organization in which they work.

LENGTH OF TIME IT TOOK TO FIND A JOB AFTER GRADUATION

The figure shows that in less than a month, 46.2% of the respondents have found a job. On the other hand, 23.1% of the respondents have found a job in one to 6 months and 15.4% of the respondents have found a job in seven to eleven months. This would imply that graduates of the BEEd program are immediately seeking job opportunities right after receiving their degree. Furthermore, this could also mean that graduates are hired by institutions/companies because despite being a fresh graduate, they possess the necessary skills and attitudes that they seek in an employee. This is supported by an article from JobStreet (2023) saying that larger companies have the most demand for fresh graduates with interview performance as one of the main basis for hiring the graduate, followed by attitude and punctuality displayed, and the results of recruitment assessment such as test and practical exams.

Table 6. Length of time it took to find a job after graduation

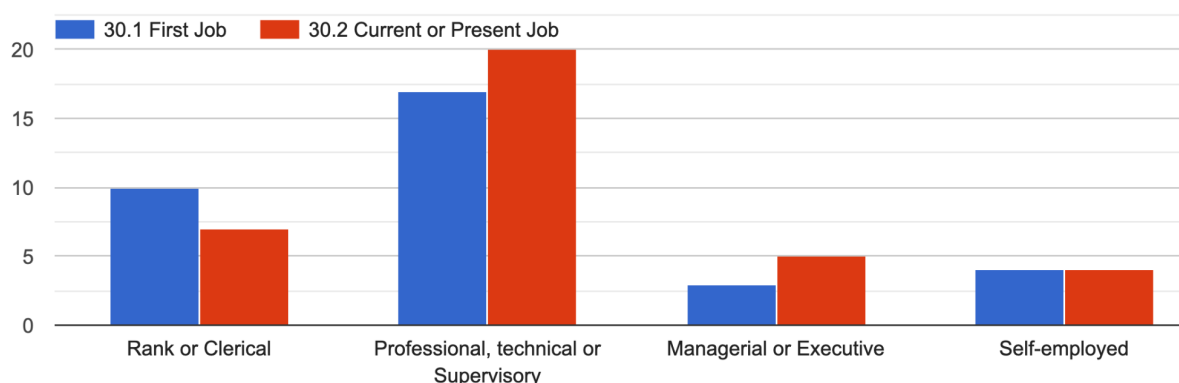

JOB LEVEL POSITION

The graph shows that the positions held by the graduates on their first and current job are in the areas of professional, technical or supervisory. This would imply that most of the graduates are seeking job positions that are in line with their degree. This is possibly because of the fact that the techniques and abilities that they have acquired during their academic years were more on developing technical skills as well as supervising a group. The result could find support in a survey conducted by Butts (2023) where

			Effective Date	
			Page	Page 7 of 11

46% of 1000 college students surveyed said they presently work in their field of study and are hopeful of finding a well-paying job in their chosen field. This would suggest that, while it is difficult to build a career after graduating from college, CapSU Dayao Teacher Education graduates are committed to finding positions that will allow them to utilize the abilities and knowledge that they have obtained in their time at the university.

Table 7. Job Level Position

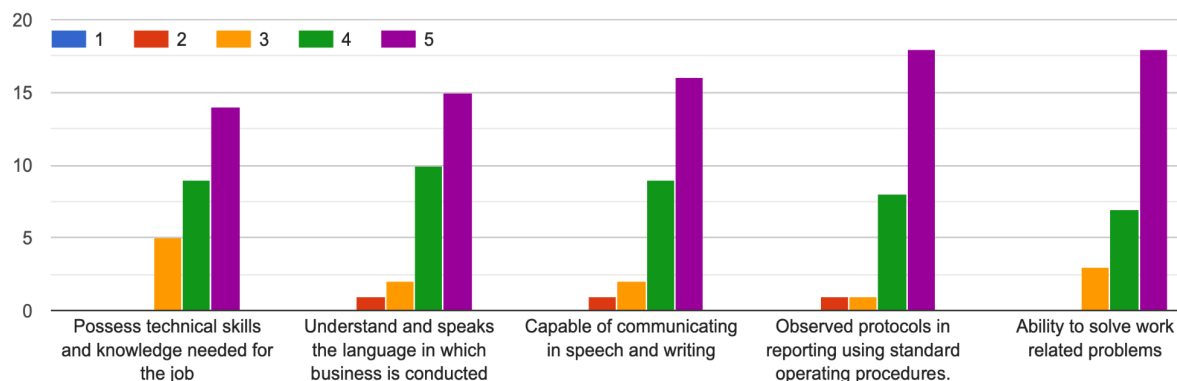

EMPLOYERS' FEEDBACK ON THE GRADUATES' WORK PERFORMANCES IN THE WORKPLACE

In terms of theoretical and practical knowledge in delivering tasks and responsibilities, the majority of the employers found the graduates to be outstanding most especially in observing protocols in reporting using standard operating procedures as well as having the ability to solve work related problems. This would mean that the graduates adhere to the rules and regulations of their workplace and they maintain harmonious relationships among their colleagues by helping solve the problems in the workplace. This could be because during their academic years, graduates have been accustomed to creating and maintaining good relationships not only among their professors but also with their classmates believing that these classmates would become their colleagues in the future. This could find support in the article of Dayo (2022) stating that new graduates armed with new skills from lecture halls are always eager to convert the theories learned into practical results to prove their bosses wrong about their negative attitude toward hiring fresh graduates.

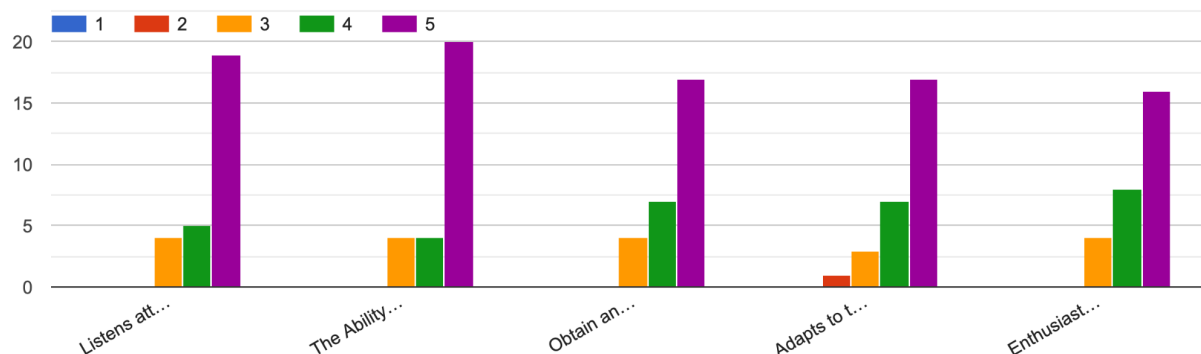

Table 8.1 Theoretical and Practical Knowledge in Delivering Tasks and Responsibilities

In terms of trainability of employed graduates on the skills needed for the job, employers found the graduates to be outstanding in having the ability to learn new skills and knowledge on the job. This implied that the graduates are eager to perform well in their workplace by ensuring that they learn the necessary skills. Furthermore, this would imply that the graduates apply the learnings that they have acquired in the academe such as following the attitude of a teacher which is to perform their very best in everything that they do since this is a character that has constantly been emphasized by their professors. In the article of Dayo (2022) stating that fresh graduates are typically adaptable employees eager to learn and succeed in their new roles. They are the most obedient employees to their managers because they devote their time to understanding and learning how to excel at their jobs.

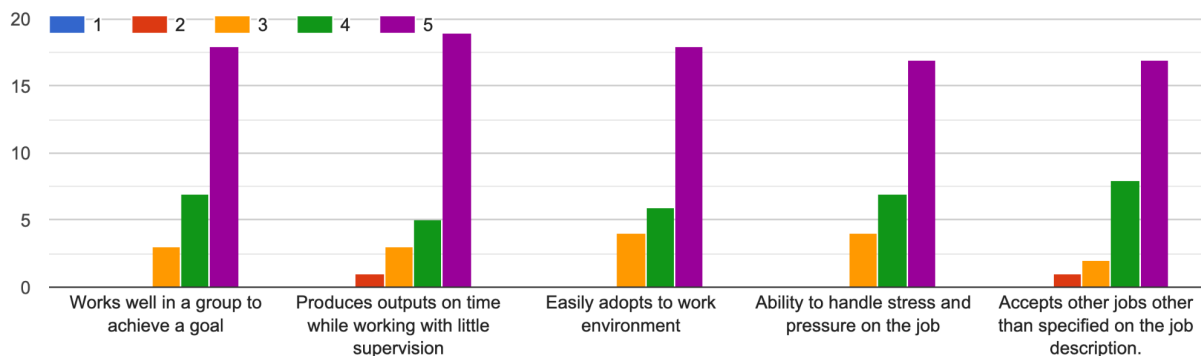

Table 8.2 Trainability of Employed Graduates on the Skills Needed for the Job

In terms of carrying a positive work attitude such as teamwork, confidence, self-motivation, etc., employers found the graduates to be outstanding in producing outputs on time while working with little supervision. This implied that upon entering the workforce, the graduates already have the confidence and value the importance of camaraderie in the workplace. This would also suggest that employers have observed that graduates have strong workplace adaptability and can complete tasks with little to no supervision. With this, a trust between the employer and employee is built and allows the employee to showcase their skills and creativity. This could be supported by the article of Marshall (2022) stating that supervision, if over-controlling, can lead to a kind of learned helplessness, where people stop thinking for themselves and just wait for instructions. As a result, this can be both belittling and demotivating to the employees.

Table 8.3 Carrying a Positive Work Attitude Such as Teamwork, Confidence, Self-Motivation, etc.

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

CONCLUSIONS

Respondents of this study were mostly single, female, located in the city, and graduated in the year 2018.

The majority of graduates have regular or permanent employment, indicating that they are sought after for permanent positions because of their skills and work ethic. This is indicative of strong work ethic and high standards of performance that were cultivated in school. Additionally, the positions held by the graduates on their first and current job are in the areas of professional, technical or supervisory. This shows that graduates place a high value on their degrees by working in fields that will help them improve their abilities.

The length of time it took for the graduates to find a job after graduation is less than a month. This shows that the graduates are able to overcome the difficulties of finding employment, especially because they are recent graduates. Furthermore, this suggests that there are still companies that value the fresh ideas that a recent graduate might bring to the organization.

Employer's feedback on the graduates' work performances in the workplace suggests that they are outstanding in terms of observing protocols in reporting using standard operating procedures as well as having the ability to solve work related problems. Likewise, graduates are outstanding in having the ability to learn new skills and knowledge on the job. Finally, the graduates are also outstanding in producing outputs on time while working with little supervision. This shows that the Teacher Education graduates of CapSU Dayao are dependable employees who can contribute new ideas to their organization. Furthermore, graduates are motivated to learn and thrive in the workplace. The graduates also have the soft and hard skills that organizations require of their employees in order for them to do their jobs well.

RECOMMENDATIONS

In as much as the study revealed that there is percentage of graduates who are not yet employed and never been employed, albeit the fact that it is low, this information may be used by the Teacher Education Department to enhance their linkage with the different schools in the immediate vicinity and the nearby towns as well.

The Teacher Education Department may continually aspire for graduates to be provided with relevant and effective teacher education training to escalate their employment prospects after graduation and passing the LET.

Although the researchers were persistent in their efforts of soliciting the involvement of many graduates, there was a limited number of graduates who participated in the study, which poses limitations to the study and may affect the generalizability of findings. In view of this limitation, a future study that is more comprehensive in scope targeting a higher number of respondents is recommended to enhance the generalizability of results.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

In-service Teacher Trainings.

(15) Technology Transfer Activity (Indicate the specific products, activity design, processes or services transferred as extension activities)

None

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.)

(17) Acknowledgments (Include only important persons and institutions with involvement in funding and conduct of the research. Justify paragraphs with main headings in caps.)
