

CAPIZ STATE UNIVERSITY
BURIAS CAMPUS

EXTENSION CATEGORY

PAPER TITLE: PATUBAS (Poverty Alleviation through Technology Utilization Based on Agricultural Systems)

PROJECT LEADER: Roger L. Berganio

COMPONENT LEADERS:

Prof. Elsie L. Baranda – Instructor 1
Prof. Freddie L. Baranda – Instructor 1
Prof. Roger L. Berganio – Asst. Prof. 3
Dr. Genoveva N. Labaniego – Professor 6
Dr. Salvacion J. Legaspi – Professor 6
Prof. Rodriz C. Loja – Instructor 1
Prof. Altea S. Romero – Instructor 1
Dr. Ryan T. Sarimong – Asso. Prof. 5
Dr. Ramises N. Solante – Professor 6
Dr. Emelita P. Solante – Professor 6

CAMPUS: BURIAS

CAMPUS EXTENSION PROGRAM: Community Development Extension Program (CDEP)

CAF BANNER PROGRAM: PATUBAS (Poverty Alleviation through Technology Utilization Based on Agricultural Systems)

BENEFICIARIES: MAMBUSAO & JAMINDAN

TIME FRAME/DURATION: 2 years

RATIONALE

Climate change has made the small farmers and their families in the municipalities of Mambusao and Jamindan the most vulnerable. This is aggravated by the fact that they are landless, less educated, financially hard-up and could hardly survive with the increase in price of basic commodities. All these problems affect their livelihood. These individuals have to be reached out for them to feel that CAPIZ STATE UNIVERSITY exist and is ready to extend help through their extension programs.

These individuals have to be assisted on how they could increase their productivity, convert their production to income and eventually alleviate them from the bondage of poverty and entertain hope for a brighter future.

The project PATUBAS was conceptualized to give hope and best alternative to the target beneficiaries by introducing to them new ways of doing things using appropriate technologies through livelihood training programs until they become agripreneurs and self-reliant with the assistance of experts in the field they would like to undertake. These beneficiaries need special touch from the

college so that once more they will entertain more hope and dreams to survive. The religious-motivational approach adopted from South Korea (Ngadima D &Ngadima CA, 2018) will be adopted.

The project PATUBAS consists of three phases of implementation. The **first phase** will be the preparation of their absorptive capacity and readiness to become participants to the program through conduct of series of seminars which will be started with values reorientation down to determining their potentials and eventually on how to become agripreneurs. The beneficiaries will be the one to identify whether they will attend trainings on poultry production, mushroom production, organic farming, sustainable crop production, backyard vegetable production and ornamental/cutflower production.

The **second phase** of the project implementation will be identification of best interventions with the assistance of the faculty assigned. An intervention plan will be crafted based on the identified need of the target beneficiaries. The **third phase** will be implementation of the intervention plan and monitoring by the faculty assigned.

OBJECTIVES

1. Provide the best option for the beneficiaries in terms of livelihood activities.
2. Maintain a pool of experts for technical needs of beneficiaries, both in-school and off-school
3. Provides venues for technology promotion and engagement in agriculture
4. Increase the productivity of the beneficiaries.
5. Increase income of the beneficiaries.
6. Help the beneficiaries entertain much hope to survive and eventually grow and alleviate their economic status

PROJECT DESCRIPTION

This Extension Project PATUBAS aims to uplift the economic status of target beneficiaries in the municipalities of Mambusao and Jamindan where CAPSU-Burias College of Agriculture and Forestry is operating.

This project aims to provide another best alternative solution to the problems of these target beneficiaries through motivational approach of touching their lives as they become vulnerable to the crises brought about by natural and man-made calamities.

The project will be implemented in three phases; the first phase is preparing the absorptive capacity of the beneficiaries. The second phase is identifying the best and appropriate intervention/s for these beneficiaries. The third phase is implementation and monitoring.

The project started on December 2021 and launched on June 9 -10, 2022 with the following activities: consultative meeting with the identified beneficiaries based on available data, approval of the request and packaging of the proposal based on the beneficiaries needs and concerns, presentation of the proposals to the beneficiaries with the presence of CAF faculty; meeting with the concerned CAF faculty, approval of the proposal, preparation of memorandum to the faculty who will be assigned to train, supervise and monitor the progress of the beneficiaries; meeting with the target beneficiaries, meeting of beneficiaries and assigned faculty, signing of MOA between beneficiaries and CAPSU, signing of contract between CAF of CAPSU-Burias and the beneficiaries, conduct of Values Reorientation Seminar, conduct of simultaneous trainings on: Mushroom Production, Animal Production, Organic Farming, Sustainable Crop Production, Backyard Vegetable Production and Ornamental/Cutflower Production, implementation, weekly monitoring by the faculty assigned, conduct of seminar on marketing of products, record keeping and profit computation, evaluation of the program, identifying and documenting best practices, replanning.

On top of these, the College will maintain an extension activity in the campus through dissemination of a package of technology on rice production. Likewise, it has a standby pool of experts for technical and consultancy services which will address the requests of beneficiaries for trainings, consultancy and advisory services.

METHODOLOGY

Conduct Needs Assessment

The College of Agriculture and Forestry conducted needs assessment to find out what are the needs and concerns of the identified beneficiaries. Then, requested and made the packaged proposal based on the results of the Needs Assessment. And presented the proposal to the beneficiaries.

Launch and Sign Memorandum of Agreement (MOA)

The project PATUBAS of College of Agriculture was launched on January 9 – 10, 2022 at the Burias Gym, Mambusao, Capiz. Followed by the signing of Memorandum of Agreement between the College of Agriculture and Forestry, Capiz State University – Burias and the beneficiaries.

Conduct of Training

After the launching of the project PATUBAS a set of seminars and trainings are already conducted to the beneficiaries. The beneficiaries chose and attend trainings that are suited based on their interest and needs. The trainings conducted were: Ornamental/Cut Flower Production, Vegetable Production, Mallard Duck – Rice Integration, Pest Management, Salted Egg, Tocino Processing, Multi-crop Chipper Machine Operation, Swine Production, Artificial Insemination, ASF Information Drive, Growing Vegetables on Hydroponic System, Mushroom Production, Darag Native Production, and Organic Production.

Hog Dispersal

Identification and assessment on the beneficiaries were made to determine the capable beneficiaries. After, the conduct of training on Hog Raising and Artificial Insemination, signing of MOA between the beneficiaries and the College of Agriculture and Forestry, Capiz State University – Burias are made and witnessed by the barangay officials.

RESULTS OF THE INTERVENTION

Monitoring was done to track the progress and performance of the project PATUBAS. The observed results are:

1. Enhanced knowledge of the farmers on the different livelihood system.
2. Provided venues for technology promotion and engagement in agriculture.
3. Provided best option of alternative way for the beneficiaries in terms of traditional farming.
4. Provided venues for agri-business opportunities to farmer beneficiaries and the community

LESSONS LEARNED

1. Collaboration to different agencies and the LGU is very important for the success of the project.
2. Cooperation of the farmers is an important part in achieving the success of the project and its sustainability.
3. Trainings and Seminars must be based on the interest and needs of the beneficiaries for them to cooperate on the project.

RECOMMENDATIONS

1. Constant Monitoring should be done to track the progress of the project for its success and sustainability
2. Look and Collaborate to other agencies for additional funding to sustain and continue the different activity to be done.
3. CAPSU – Burias and the College of Agriculture and Forestry should continue to assist and give technical services to the beneficiaries to sustain the project.
