(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

According to Das & Baruah (2013), human resources are assets that can make as well as break an organization, and retaining and satisfying them are the most difficult task faced by an organization. High rate of turnover has posed many problems in front of management (Chaubey, 2013). It has been regarded as the key issue in the era of globalization, particularly in the area of human resource management in an organization (Mamun & Hasan, 2017).

Faculty who leave an institution often inflict corresponding costs for the institution (e.g., recruitment costs, training costs, and other administrative expenses) related to finding a new faculty to replace of member can cause disruptions in teaching programs.

With this, this study will examine the factors that satisfy faculty members to perform well in their job as well as identify if there are prevailing intentions for them to leave the job. Also to be studied are ways to increase job satisfaction and job performance of employees for them to stay in their job. A faculty development plan can therefore be useful for the institution, most especially for the human resource management office, to plot for specific strategies to retain and satisfy employees.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned. .)

In order to determine the job satisfaction, job performance, and turnover intention of faculty members in CapSU, the researcher will first have to gather information from the respondents about their personal profile. Respondents should also answer a research questionnaire about job satisfaction, job performance, and turnover intention from the adopted questionnaires. Based on this information, the researcher can then recommend and construct an enhanced faculty development plan.

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

This study aims to determine the job satisfaction, job performance, and turnover intention of faculty in Capiz State University an input to an enhanced faculty development plan.

This study specifically aims to:

1. describe the profile of faculty in Capiz State University;
2. determine the level of job satisfaction and performance of faculty in Capiz State University;
3. determine the extent of turnover intention of faculty in Capiz State University;
4. determine if there is a significant relationship between faculty profile and job satisfaction, faculty profile and job performance, and faculty profile and turnover intention ;
5. determine if there is a significant relationship between job satisfaction and job performance, job satisfaction and turnover intention, and ;
6. determine if there is a significant relationship between job performance and turnover intention; and to
7. recommend an enhanced faculty development plan.

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of-the-art of current technology / information from which the project proposal will take-off).

Job satisfaction is the extent to which the level of contentment of employees about their job is achieved. Job satisfaction is the overall liking and contentment associated with a job or task thus giving life satisfaction (Clinic et al., 2019). Job satisfaction shows employees' emotional response toward a task or a job (Parvin, 2011). In academe, job satisfaction is important as it influences the quality of work of employees specifically the faculty employees as they engage with the students and sometimes with the clerical assignment (Thekedam & Thekedam, 2010). Parvin (2011); Singh (2013); Munish (2017) does not recognized a single factor that influences employee job satisfaction, but there are multiple factors such as pay, supervision, relationship with co-workers, promotion, training and development, nature of the job itself, job security, fairness. With all these factors present, the

			Effective Date	October 31, 2019
			Page	Page 3 of 7

organization can suggest a set of workplace norms and practices that might be used in promoting job satisfaction and retention to the employees.

Job performance is the effectiveness of the contribution of the employees' to the overall success of the organization. Job performance contributes to the retention of academic employees (Callaghan et al., 2017) thus job performance determines organizational performance (Farooqui & Nagendra, 2014); (Mittal & Jain, 2012). Job satisfaction thus ultimately leads to job performance (Sony & Mekoth, 2019). Employees who are likely to feel that they are treated well and consider that their company finds ways to satisfy their employees, will perform satisfactorily and shows greater results or higher performance if expectations are met. This was backed by Bhatti et al., (2019) by stating employees who are satisfied and happy with their job in their workplace, perform better, and those who are not, perform poorly.

Turnover intent is the tendency or desire of the employee to leave the current job or his willingness to separate from the organization (Azeez et al., 1993; & Mobley et al., 1978). However, according to Williams & Hazer (1986), turnover intention can either be the decision of employees to leave the organization and/or that organization replaces them. Thereby, job intention can be either voluntary or involuntary (Saeed & Rizwan, 2014). Joseph et al (2007 as cited by Lin, 2020), and Hancock et al., (2013) stressed that turnover intention is the predecessor of actual turnover of employees. This turnover, afterward, correlates to a negative impact on the organization in terms of productivity, and recruitment costs, and lowers company morale among others (Hayward et al., 2016; & Saeed & Rizwan, 2014). Scholars noted several factors that influence employee turnover intention, including job satisfaction (Yu & Kang, 2016) and job performance (Saeed & Rizwan, 2014) (Wright & Cropanzano, 1998).

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.

This study was anchored on Herzberg's Two-Factor theory to better comprehend the job satisfaction and job performance of employees that influence employees' decision to retain or leave the job. Herzberg (1959 as cited in Ghazi et al., 2013) used two models – satisfiers (also known as motivators) and dissatisfiers (also known as hygiene factors) - to explain employees' job satisfaction and dissatisfaction inside the workplace. The presence of certain factors such as achievement, recognition, responsibility, the work itself, advancement, personal growth, and the like promotes job satisfaction. On the other hand, working conditions, co-worker relations, policies and rules, supervision, and salary may influence job dissatisfaction among the employees (Herzberg, 1966).

To promote motivation to the employees, organizations should recognize that there is a dual-factor theory to motivate employees to do their job. One is, the organization should identify the factors that eliminate dissatisfaction with the workers. Conversely, they should be able to support the workers in finding out the things that satisfy them (Clinic et al., 2019).

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

This study will adopt a descriptive, cross-sectional survey, correlational research designs. The descriptive research design will be used to determine the level of job satisfaction and job performance of faculty in Capiz State University. The correlational research design will determine the relationship between faculty profile and job satisfaction; faculty profile and job performance; faculty profile and turnover intention; job satisfaction and job performance; and job performance and turnover intention. The researcher will use a qualitative and quantitative data to collect and analyse the answers of the respondents.

The participants of the study are the permanent faculty members of Capiz State University. They will be selected using a stratified random sampling. Faculty profile (e.g., age, sex, marital status, highest educational attainment, number of years in service, college/department affiliated, and gross monthly income) will be used to gather information from the respondents.

The research instrument, an adopted questionnaire, is composed of four parts. Part I is used to gather the profile of the faculty such as name, age, sex, civil status, highest educational attainment, number of years in service, college/department affiliated, and gross monthly income. Part II is the first part of the main questionnaire that is used to gather the data on job satisfaction in terms of pay, supervision, co-workers, nature of work, and communication. Part III, on the other hand, is used to gather data on job performance in terms of task performance,

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
	Document Title:	RESEARCH PROPOSAL	Revision No.	00
			Effective Date	October 31, 2019
			Page	Page 4 of 7

contextual performance, and counterproductive work behavior. Lastly, Part IV is used to gather data on turnover intention.

The data after it will be collected, will be processed using the Statistical Package for Social Sciences (SPSS) version 20.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use Gantt chart.

	December	January	February	March	April	May	June	July	August
1. Research Proposal									
2. Distribution and retrieval of questionnaire									
2. Data gathering, processing, and analysis									
3. Construction of faculty development plan									
4. Presentation and revision of enhanced faculty development plan									

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

An enhanced faculty development plan which can be utilized by the whole CapSU system is the expected output of this study.

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(16) Targets Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output)

The target beneficiaries of this study will be the permanent faculty members of CapSU, the human resource management office, and the institution as a whole. Also, the students and other stakeholders can be the beneficiaries of this study.

Overall academic excellence of the university because employees are satisfied and motivated of their work, and less effort in recruitment processes and expenses are the expected effects of the project output.
