(7) Sector/Commodity

BUSINESS ADMINISTRATION

(8) Discipline/Field of Specialization

BUSINESS ADMINISTRATION

(9)Rationale

Businesses today require a different kind of leadership, a kind of leadership that can create an environment where businesses around the world can thrive through uncertainties. People's organizations, like the DSWD's Sustainable Livelihood Program (SLP) need to have competencies, agility and the ability to do something different and currently relevant despite their limited capabilities and resources.

The SLP was launched in 2011 and an assessment of the program was conducted in 2017 outlining management issues that DSWD should pay attention to in order to further assist these SLPs. The study of Albert and Dacuycuy (2017) identified weaknesses in terms of governance, leadership, business processes and capacities of members and officials of SLPs. It is in this context that the researchers, as extension workers of Capiz State University involved in assisting these communities, investigated and tried to find out if these issues are still of the same degree as they were 5 years ago, given the circumstances that transpired in the organization during the pandemic paying more attention to the effects of Covid-19 and the changes in people's buying behavior and preferences as a result of inaccessibility of goods and services, trends and lifestyle. It is in the interest of the researchers to gather data to help the extension services of CapSU Burias Campus in assisting these SLPs to improve their access to market especially the indigenous people's group who produces locally resourced products but are having difficulty marketing them due to lack of product design enhancement and road access for far flung barangays where production takes place.

(9-A) Project Description

The study will focus on the SLPs engage in the micro-enterprise development track. Specifically, it aimed to determine the level of management capability of the SLP association officials in terms of business planning, decision making and problem solving as well as the financial performance of the SLP Associations in terms of equity, profitability and innovation. Of the 31 SLP Associations in the Municipality of Jamindan, 13 SLP associations were involved in the study because these SLPs had more than 50 members. Three hundred (300) members were randomly identified as respondents from the 1,203 members of these thirteen SLPs.

This study employed a descriptive research design. A researcher-made validated and reliability tested survey questionnaire was used and distributed to the respondents personally with the help of the barangay officials and faculty members of CapSU Burias Campus.

The study investigated the management capability of the SLP Association officials and the association's financial performance as of 2022 to find out how the DSWD, Capiz State University Extension Office and other stakeholders will be able to continue to assist them in surviving competition and attain business sustainability.

(10) Statement of the Problem

1. What is the profile of the SLP members in terms of age, gender, civil status, estimated monthly family income and number of years of membership to SLP association?
2. What is the level of management capability of the SLP association officials as a whole and in terms of business planning, decision-making and problem-solving?
3. What is the level of financial performance of the SLP associations as a whole and in terms of equity and profitability?
4. Is there a significant difference in the level of management capability of the SLP officials when respondents were grouped according to their profile?
5. Is there a significant difference in the level of financial performance of the SLP associations when respondents were grouped according to their profile?
6. Is there a significant relationship in the level of management capability of the SLP officials and the financial

performance of the SLP associations as perceived by SLP members?

(11) Review of Literature/Prior Art Search

The report of the World Bank (2018) entitled “The Philippines Sustainable Livelihood Program: Providing and Expanding Access to Employment and Livelihood Opportunities” stated that since 2011 the Department of Social Welfare and Development led in providing opportunities for income-generating activities and livelihood development through the implementation of the Sustainable Livelihood Program. Since its introduction, the SLP program has grown from serving 46,000 families to 340,000 in 2015, helping around 166,000 families by 2017. The assistance was extended to the Pantawid Pamilyang Pilipino Program (4Ps) beneficiaries through the conditional cash transfer program of the government which targeted 80 percent program beneficiaries. Other beneficiaries consisted of poor families identified by the Listahanan national household targeting registry (World Bank, 2018).

Despite this, these organizations face many challenges represented in the lack of efficient management, lack of resources and access to information, creating the need for capacity building, maintenance and enhancing capabilities (Karanth, 2015). This result agrees with the findings of the study of Dacuycuy (2017) who opined that among the weaknesses found in the governance and business processes of SLPs were in terms of the capabilities of members and officers of SLPs.

Leaders of associations today must wear more than just an "advocate's" hat. Tomasso (2016) opined that major changes in social, economic, and political environment led successful association leaders to acquire corporate skills to cope with the demand of modern business operations. Although leaders of associations need to be public-policy savvy and possess the ability to develop and maintain critical relationships, they must also show traditional corporate executive competencies, such as a level of understanding business issues and exhibit a high degree of operational expertise. Common leadership attributes includes being creative, strategic, committed, results-oriented, decisive and unpretentious (ASAE Center for Association Leadership, 2016). It is not enough to possess the connection to be assisted financially to effect sustainability particularly when working with the poor sector of society.

This result served as basis for this study since low repayment performance indicates poor financial management and working with other programs and agencies of the government towards poverty alleviation necessitates organizational maturity and management capability among its leaders and officers which may serve as baseline data to implementing agencies.

(12) Theoretical Framework

This study was supported by the Katz Three Skills Theory of Robert Katz (1955) on management skills and the Basic Financial Reporting theory of Guochang Zhang's (2021). Robert Katz' Three Skills Theory identified three critical skill sets for successful business leaders namely: technical skills, conceptual skills and interpersonal skills. Katz contend that as individuals go up the rank, the more conceptual skills, such as creative thinking skills, decision-making skills, technical skills and general management skills to solve problems that may arise, are necessary. However, business leaders occupying some other corporate roles and at higher organizational levels require more critical technical skills. Senior managers may need less technical skills since planning, strategic decisions, problem solving and ethics are integral and more conceptual while middle and lower level skills to include time management, data gathering, appraisal, and discussions are usually technical. Interpersonal skills, on the other hand, require managers the ability to assign responsibilities and authority to achieve goals. All the same, management disciplines require a wide range of skills sets for business processes to effectively occur. However, this study only focused on three components of management skills: planning, decision-making and problem solving.

The study was also anchored on Guochang Zhang's (2021) Theory of Basic Financial Reporting which presents that to meet the needs of investors for information, the financial report has to be structured to describe the two dimensions of the company's operations. These dimensions are the input resources contributed by the investors which may include the cost or equity; and, the output value that is generated for them in the form of benefit or profit. Likewise, Paton and Littleton (1940) view business enterprises as organizations designed to produce income.

These theories were considered fit to be used in the study since the investigation revolve in finding out the management capabilities of the officers of the SLPs in Jamindan, Capiz as perceived by their members. Management skills are used on a daily basis towards developing management capabilities as a long term goal. The study was anchored on the Katz theory looking into the business planning skills, decision-making skills and problem-solving capabilities of the SLP officials as perceived by SLP association members. Moreover, the second dependent variable was utilized in identifying the components of financial performance anchored on Zhang's basic financial reporting theory to find out the financial performance of SLPs with regard to equity and profitability.

Conceptual Framework

The study worked on the concept that management capabilities in the aspect of business planning, decision-making and problem-solving differ considering the independent variables such as age, gender, civil status and number of years of membership to the SLP association. At the same time, the financial performance of the SLP associations in terms of equity and profitability. The relationships among these variables are presented in the schematic diagram below.

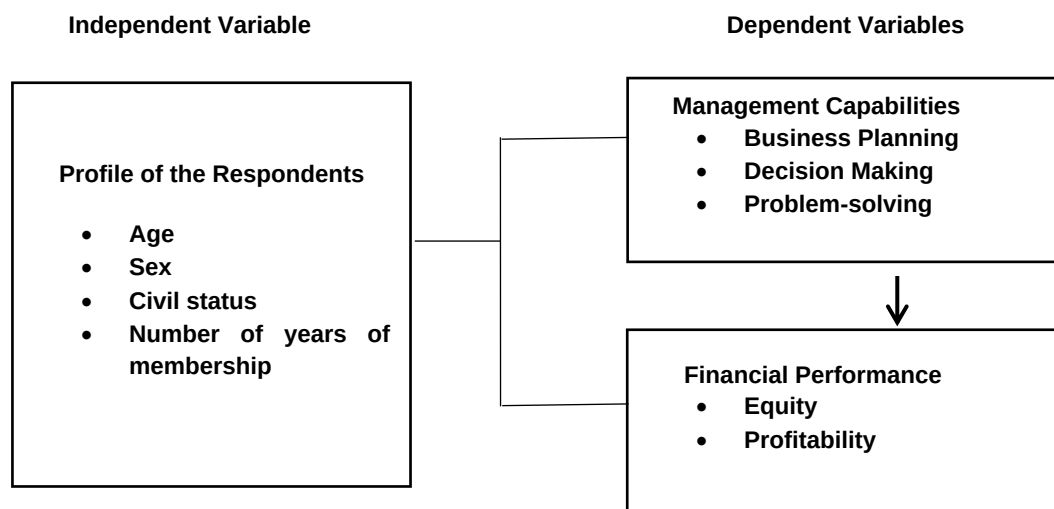

Figure 1. The schematic diagram showing the variables of the study.

(13) Methodology

The study used the descriptive-correlational research design. Data were gathered from 300 out of 1,203 members of the 13 SLP associations in the Municipality of Jamindan, Capiz with more than 50 SLP members. Stratified random sampling technique was used to give each strata of the population a chance to be represented in the study.

Permission was sought from the DSWD and the presidents of the SLP associations through a letter. A validated and reliability tested researcher-made survey questionnaire was utilized to gather the needed data. Statistical tools employed in the analysis were frequency, percentage, mean, t-test, Analysis of Variance, and Pearson r processed through SPSS.

(14) Results

1. The results of the study indicated that the SLP association officials had a moderate management capability.

Table 1. Management Capability of SLP officials.

Indicator	Mean	Verbal Interpretation
Business Planning	3.21	Moderate
Decision Making	3.21	Moderate
Problem Solving	3.32	Moderate
Grand Mean	3.25	Moderate

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
			Revision No.	00

			Page	Page 5 of 7

2. Financial performance was also moderate in both equity and profitability aspects.

Table 2. Financial Performance of SLP associations in Jamindan, Capiz.

Indicator	Mean	Verbal Interpretation
Equity	3.15	Moderate
Overall Profitability	3.12	Moderate
Innovation	3.25	Moderate
Grand Mean	3.17	Moderate

3. No significant differences were found in their perception of the management capability of SLP Association officials when grouped according to age and sex, but differences were noted in civil status and years in membership in the association.

Table 3. Differences in the management capability of SLP officials when respondents were grouped according to selected variables.

Variable	Significant Value	Probability
Age	0.855	ns
Sex	0.168	ns
Civil Status	0.000	s
Years of Membership in SLP	0.033	s

4. No significant differences were also established in their perception of the SLP association's financial performance when members were grouped according to age and number of years of membership, whereas, differences were found when their sex and civil status were considered.

Table 4. Differences in the financial performance of SLP associations when respondents were grouped according to selected variables.

Variable	Significant Value	Probability
Age	0.926	ns
Sex	0.017	s
Civil Status	0.000	s
Years of Membership in SLP	0.224	ns

5. Lastly, a significant association was established between SLP officials' management capability and the SLP association's financial performance.

Table 5. Relationship between management capabilities and financial performance of SLPs in the Municipality of Jamindan.

Variable	N	Mean	Pearson r-ratio	p-value	Remarks
Management Capability	300	3.25	0.700	0.000	s.
Financial Performance	300	3.17			

Level of significance = 0.05

(15) Discussion

The members of SLP associations of the Municipality of Jamindan perceived their SLP officials to possess a moderate level of manage in managing the affairs of their associations. This can be attributed to the lesser number of training and coaching they have received from the government. This was due to the restrictions implemented by the government during the Covid-19 pandemic where less activities gathering participants were conducted. This result agrees with the findings of the study of Dacuycuy (2017) who opined that among the weaknesses found in the governance and business processes of SLPs were in terms of the capacities of members and officers of SLPs. Furthermore, leaders of associations today according to Tomasso (2016) must wear more than just an "advocate's" hat. They must possess the skills and capabilities required of the current times.

The grand mean on the financial performance implies that SLP associations are perceived by members as performing at a moderate level of financial performance. The highest mean score on statement "has funds available in the bank" indicates that SLP associations in the Municipality of Jamindan were able to open bank accounts to receive and keep their funds. Although the municipality of Jamindan is considered a far flung municipality, this was made possible to them due to the presence of the Rural Bank of Mambusao which is located in the next municipality. On the other hand, the lowest mean score on statement "issued certificates of shares for its members" which was verbally interpreted as moderate infers that most of the SLPs in the Municipality of Jamindan was not able to provide their members proof of their ownership to the associations. This can be attributed to the lack of financial capability of the associations to finance the expense of issuing a physical certificate of shares of stocks to its members. Also, it can be deduced that members lack the awareness that such a practice is beneficial to them.

The result showing the association between management capabilities and financial performance implies that the management two variables are mutually dependent. Members believe that if their association officials had higher management capabilities, the resulting outcome will be a higher financial performance. The number of activities of the associations towards seizing business opportunities will indicate the level of management capability that the officials of SLP associations possess and this will redound to possible increase in revenues and sustainability of business operations in the long run. Thus, the slightly high result in management skills necessitate SLP associations to realize that their officials require enhanced skills development which DSWD and CapSU Extension services may augment to boost the confidence of officials to innovate and take risk.
