(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, the thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

Capiz is dubbed the Seafoods Capital in the Philippines (Guia, 2012) has been noted to produce This is supported by the report of the Philippine Council for Agriculture, Aquatic and Natural Resources Research and Development (PCAARRD) in 2020 where Western Visayas led the mussel production with 8,534.16MT, of which 7,945.70 came from the province of Capiz.

Moreover, mussels and oysters is also considered as the most important aquaculture commodity as presented in the Philippine Shellfish Industry Roadmap for 2021 – 2025.

The understanding of the different key industry players and the situation of these key players will give vital information on the situation of the mussels and oysters industry in the market.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

A descriptive study on the mussels and oyster industry in the province of Capiz.

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

The study focuses on the value chain analysis of the mussels and oysters industry in Capiz. Specifically, it seeks answers to the following questions:

1. What are the socio-demographic characteristics of mussels and oyster industry participants such as fisherfolks, processors, traders, and consumers in the province of Capiz?
2. What are the different practices of mussels and oysters in terms of variety, farming, harvesting, and post-harvest facilities?
3. What are the marketing practices as to product/s or by-products produced, pricing, place, and promotion strategies utilized by key participants in the mussels and oysters industry in the province of Capiz?
4. What are the primary and support activities involved in the mussels and oysters industry in Capiz?
5. What are the different problems met by the industry participants in the mussels and oysters industry in Capiz?

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of – the-art of current technology/information from which the project proposal will take-off).

Oyster and mussel farms in the Western Visayas region have increased because of the need for supplementary sources of income brought about by the dwindling catch of small-scale fishermen. Socio-demographic and cost and returns data were gathered from 175 oyster and mussel farmers using a combination of rapid rural appraisal techniques and a pre-tested

questionnaire. Oyster and mussel farms, less than 1000 m², were located among fish capture devices in rivers and bays. The oyster and mussel farmers belong to the marginalized sector of society with about 30% of total household income derived from oyster and mussel farming. Problems encountered by oyster and mussel farmers included poaching, mortality due to siltation or sedimentation and pond effluents, no spat, lack of financing, and lack of buyers. This study recommends that oyster and mussel farmers form cooperatives to effectively market their produce and avail of financing, and research on the non-occurrence of spat (Samonte, 1994).

Moreover, the study of Andalecio et al (2014) revealed that more educated consumers would refrain from eating large quantities of oysters and mussels which may be related to health concerns. Consumption decisions tended to concentrate more on product freshness and size rather than price. Product origin is less important for consumers in Western Visayas, although there are indications that awareness and concern about seafood safety are becoming an issue, especially for the more educated consumers. The issues of production site environment, product quality, and food safety have to be addressed to strengthen consumer confidence.

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.

The study is anchored on Michael Porter's Value Chain Model (1985) where he indicated that a value chain is a collection of activities that are performed by a company to create value for its customers. Moreover, Chai (2022) states that the "value chain is a concept describing the full chain of a business's activities in the creation of a product or service – from the initial reception of materials all through its delivery to market and everything in between".

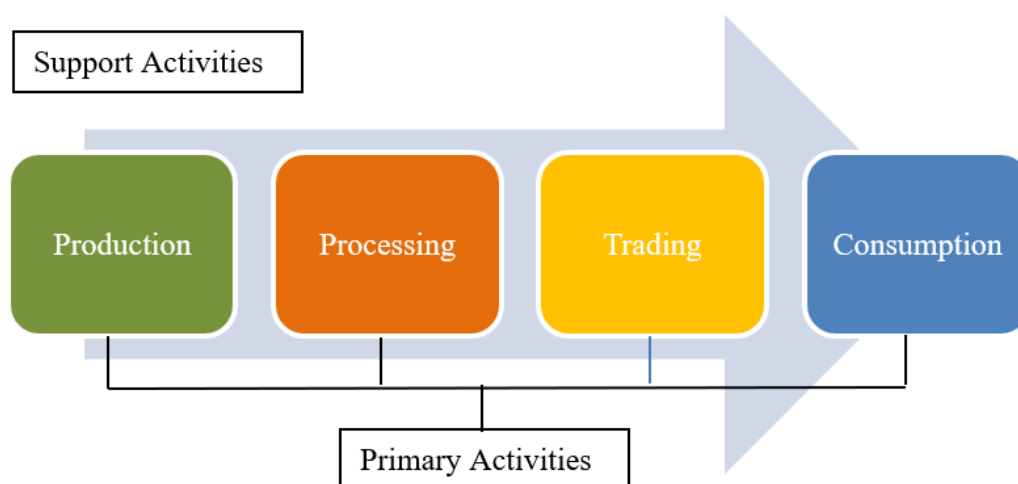

Figure 1. Theoretical and Conceptual Framework of the Study.

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

Locale of the Study

The study will be conducted in the province of Capiz covering the municipalities of Pontevedra, Pres. Roxas, Pilar, Sapian, Ivisan and the city of Roxas.

Respondents of the Study

The population of the study will be mussel and oyster producers, traders, processors, and consumers in the province of Capiz. The population of each participant will be determined and shall be considered as respondents. To facilitate the identification of these respondents, personal consultation with the barangay officials, the local government units, the Municipal Economic Enterprise Development Office, and the Bureau of Fisheries and Aquatic Resources - Capiz will be done.

Method of Data Collection

The researchers will coordinate with the Bureau of Fisheries and Aquatic Resources - Capiz, and the Local Government Units for the conduct of the study.

Data collection will be done through a questionnaire. An interview schedule will be constructed in English and translated into the local dialect to serve as the instrument in the data-gathering process. The instrument will also be validated by experts from different agencies and will be pre-tested on 30 participants for clarity.

Data collection will commence as soon as the necessary permit and clearances from LGU officials will be secured. The researchers or research assistants will serve as the data gatherers. Before they will go to the field for the interview, they will ask for the assistance of the local government unit or barangay officials for a briefing.

Data Analysis

Qualitative and quantitative analysis will be utilized. After all the interviews will be completed, the data and information will be extracted from the instruments which will then be encoded for statistical analyses. Since this study is purely descriptive in nature, the data will be summarized and analyzed using descriptive statistics such as frequencies, percentages, means, and standard deviation.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart.

Research Objectives	Year 1											
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
1. Field work/ observation												
2. Analysis of data gathered from observation												
3. Lay-outing, Editing and Printing												

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

The study will generate a market map and the distribution flow for mussels and oysters in the Province of Capiz.

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(16) Targets Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output).

Key players in the mussels and oysters industry such as fishermen, processors, traders, and consumers, the Bureau of Fisheries and Aquatic Resources – Capiz and the Local Government Units.

(17) Personnel Requirement

Name	Role (Program,Project, Study Leader)	Field of Specialization
Rosine O. Labado	Researcher	Marketing and Management

Percent time devoted to the Program/ Project/ Study

Program/Project Leader (in hours):

Program/Project Members (in hours):

(18) Budgetary Requirement

SOURCES OF EXPENSES	Quantity	Amount (PhP)
A. Personnel Services (For studies needed the Research Assistant, informant/s, guide)		26,000.00
B. Maintenance and Other Operating Expenses (MOOE) (modify and include only whichever is applicable)		20,000.00
- Transportation allowance		5,000.00
- Meal allowance during data gathering		5,000.00
- Professional fees (laboratory analysis and other related fees)		
- Miscellaneous (for incidental expenses)		5,000.00
- Printing		5,000.00
C. CAPITAL OUTLAY		
Total		46,000.00

WORK EXPERIENCE

Faculty, College of Management

Capiz State University, Burias Campus
Burias, Mambusao, Capiz
July 03, 2006 – present

- Designated as Dean of College of Management from January 17, 2020 - present
- Designated as Program Coordinator of BS Business Administration from June 2016 – Jan. 16, 2020
- Designated as Chairman, Library Services from June 2017 – Jan. 16, 2020
- Designated as Program Coordinator of BS Entrepreneurship from June 2015 – May 2016
- Designated as College Secretary from June 2015 – May 2016
- Designated as Program Chairman of BS Commerce from June 2013 – May 2015

EDUCATION

Doctor of Management – Business Management

Central Philippine University
Iloilo City
2012 – 2019

Master in Business Administration

Colegio dela Purisima Concepcion
Roxas City
March 30, 2011

BS Business Administration major in Marketing

College of Management
University of the Philippines in the Visayas
Iloilo City
April 25, 2006
