(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

This study entitled "Performance of Graduates: Tracer Study of the MS Graduates of Capiz State University Burias" was conducted in the first semester of the school year 2021 -2022 covering MS graduates in the Capiz State University Burias Campus from 2017 - 2021 to answer the following questions: (1) What is the profile of the respondents in terms of age, sex, year graduated, degree completed, eligibility, course, employment status, Job before Masteral's Degree, income before master's degree, present position, gross family income; (2) What are the factors that motivate the respondents to pursue graduate studies at Capiz State University Burias campus. (3) What are the skills acquired by the respondents upon earning graduate program at Capiz State University Burias Campus. (4)) What are the benefits earned by the respondents after earning Masters' Degree; (5) What is the job performance of the respondents as perceived by their employers; (6) What is the rate on the teaching effectiveness of graduate school faculty as perceived by the respondents.

The study employed the descriptive research design. The data were gathered by the researcher using an adapted questionnaire to answer the above-mentioned problems. Descriptive statistics was used to analyze the descriptive data.

Results of the study revealed that more than two-fifths of the MS graduates were between 30-35 years old with mean age of 33 years old, mostly females, majority a holder of professional license for Agriculturist and other eligibilities, majority Agronomy major, were contractual faculty before earning Master's Degree with a mean income of Php 14, 963.95.

After finishing their MS Degree, majority of the MS graduates were now occupying Instructor I position while others holding higher positions with with an average income of Php 26,351.10.

The researcher found out the top three factors that MS graduates motivated to pursue graduate studies in the CapSU Burias Campus due to career advancement, personal/professional development and promotion.

In term of benefits that MS respondents earned after finishing master's degree were due to personal/professional development, career advancement, and promotion.

In terms of competencies that have been improved after earning the MS degree were academic and technical knowledge, research capability, and team spirit/human relation.

In terms of the job performances of the graduates as perceived by their employers, majority of employers rated their respective employees as "outstanding", while others of the employers rated their employees "very satisfactory." This implies that the employers were satisfied in terms of job performance of their employees or MS graduates.

On the other hand, in terms of teaching effectiveness, it was revealed that the teaching effectiveness of professors handling courses in the MS Agronomy and Animal Science program as perceived by respondents. More than one-half of the respondents rated their professors as "very satisfactory" due to teaching skills; a great majority rated " very satisfactory" due to subject matter; two-thirds rated as "very satisfactory due teaching methodology; almost three-fourths of respondents rated as "outstanding" due technological competence; majority rated "satisfactory" due to student-teacher relationship; and nearly three-fourths of the MS graduates rated their professors to be "very satisfactory" on teaching effectiveness due to assessment.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

Teaching effectiveness, teaching skills, personal/professional development, prestige of the institution

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

Academic institutions always aim to provide world class and best education to produce competitive graduates in the job market. One good tool to determine the quality and the extent of functionality of the services schools delivered to their graduates is the outcome of a graduate tracer study (GTS) that appropriately evaluates the employability of their alumni. These outcomes can provide a sound basis for improvement on the contents of curricula to courses' execution on teaching and learning (Tanhueco-Tumapon, 2016).

Graduate education plays an important role in the development of manpower that can provide leadership to efforts geared towards national development. It molds the human resources needed to propel at least two important driving forces of development – education and research. (Cagasa E. et al. 2017). Quality education, greatly depends on the teaching personnel. The teachers are the most pivotal variable in education because their performance spells success or failure in attaining total human development vital for the economic growth

of the nation. This means that the ability of the next generation of Filipinos to manage their affairs rests on the ability of the educational system to train students with proper attitudes, values and skills to become productive members of the society.

One of the pressing problem of graduates/employees nowadays is mismatch to position they are applying for which resulted to unemployment and lack of the opportunity for graduates to seek a job which suit for their qualification. Although the graduates were academically prepared but some employers are hesitant to hire them considering each institutions deliver varied competences to their students or graduates. The academic freedom of each institution greatly influenced the performance of the workforce in the industry. The absence of standardization may resulted to mismatch to needs of a certain industry. But despite of uncertainties the graduates or employee they were forced to work to earned money or income for living. Many instances and sad reality nowadays that a registered teacher were hired as sales clerk in the malls or in the supermarkets or sometime a registered nurse were hired as sale agent or sometime a registered agriculturist working as driver or waiter in the restaurant. This mismatch may be attributed to lack of coordination among the industry sector and the instutions which supposedly should work in harmony which the school produce quality quality which dive to the need of of the industry. With these premise this study was conducted to assess the skills, competences as well as the feedback of employers. Hence this study was conducted and to understand how well a university has performed in terms of developing the competencies of its students and to gather information about the employability and employment status of its graduates, as well as their feedback on the degree programs they took from the university, a number of researchers have conducted graduate tracer studies (Latif & Bahroom 2010; Menez 2014; Ramirez, Cruz & Alcantara, 2014; Aquino et al 2015).

This study was an evaluation of the employability of MS in Agronomy and Animal Science of the Capiz State University Burias Campus from 2017- 2021 as input to appropriate intervention scheme.

The study was conducted to sought answer on the performance of graduates: tracer study study of the MS graduates of the CapSU Burias Campus specifically to answer the following statement:

(1) What is the profile of the respondents in terms of age, sex, year graduated, degree completed, eligibility, course, employment status, Job before Masteral's Degree, income before master's degree, present position, gross family income; (2) What are the factors that motivate the respondents to pursue graduate studies at Capiz State University Burias campus. (3) What are the skills acquired by the respondents upon earning graduate program at Capiz State University Burias Campus. (4)) What are the benefits earned by the respondents after earning Masters' Degree; (5) What is the job performance of the respondents as perceived by their employers; (6) What is the rate on the teaching effectiveness of graduate school faculty as perceived by the respondents.

(11) Materials and Methods or Methodology (This includes the materials, methods,duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

This study used the descriptive research design to determine the employability of the MS Agriculture graduates.

This study was conducted in the first semester of the school year 2021 - 2022 covering MS Agriculture in the Capiz State University Burias campus.

The respondents of the study were the 19 MS graduates of Capiz State University Burias Campus Graduate School.

The data were gathered by the researchers using an adapted questionnaire.

The researchers personally sent and retrieved the questionnaire on line through Google form. But with those poor connectivity administering of the questionnaires was done by face to face basis.

Before the entries in the questionnaires were encoded, information provided by the respondents were first edited by the researcher with the help of the statistician. Then, the edited questionnaires were numbered for encoding into the data matrix and then finally processed. For descriptive data, statistical tools such as frequency count, percentage, and mean were used in the analysis of the data.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

Results and Discussions

Age

More than two-fifths or 42.11 percent of the MS respondents were between 30 – 35 years old; 21.05 percent were 41-45 years; 15.79 percent were aged 36-40 years old and 46 – 50 years old and only 1 or 5.26 percent of the respondent was in the 51 - 55 years age bracket.

Sex

Majority or 63.16 percent of the MS graduates were males and only 7 or 3.84 percent were females. It implies in this study, that male MS graduates outnumbered the female respondents.

Major Course

More than one – half or 57.89 percent of the respondents were MS animal science and only 8 or 42.11 percent were MS in Agronomy Major

Eligibility

More than One-half or 52.63 percent of the MS graduates had eligibility of Licensure Examination for Agriculture (LEA); 3 or 15.79 percent, Agricultural Engineer Licensure; 2 or 10.53 percent, Licensure of Examination for teachers and Civil Service Examination; and only 1 or 5.26 percent had Forester Licensure Examination & PD 807 and Doctor of Veterinary Medicine.

Employment Status

Almost all or 94.74 percent of the MS respondents were government employee; and only 1 or 5.26 percent was unemployed.

Job Before Master's Degree

More than one-fourth or 27.78 percent of the respondents were contractual faculty; 11.11 percent were teachers and casual faculty; and only 1 or 5.26 percent among the respondents was either agricultural technologist, DepED Teacher, dormitory manager, farm worker, government employee, instructor I, job hired employee, senior agriculturist, and university research associate II.

Income Before Master's Degree

Before their Master's degree more than Two-fifths or 47.37 percent of the respondent had income between 10,001 – 20,000 before Master's Degree; 6 or 31.58 percent, 10,000 and below; 3 or 15.79 percent, 20,001-30,000; and only 1 or 5.26 percent had income between 30,001 and above bracket. The MS respondents had income of 14, 963.95 on the average.

Present Position

More than one – half or 57.89 percent of the MS respondents were Instructor I; and only 1 or 5.26 percent were either Instructor II, Instructor III, Asst. Prof. I, Asst. Prof. III, Dorm Manager, Senior Agriculturist, Veterenarian and self-employed as entrepreneur.

Gross Monthly Income

After their MS degree, majority or 63.16 percent of the MS respondents had income between 20,001 – 30,000; 5 or 26.32 percent, 30,001 and above; and only 1 or 5.26 percent had income between 10,001 and below and 10,001– 20,000 bracket. The MS respondents had income of 26, 351.10 on the average. In this results, It can be noted that there is an increase of their income from 14,963.95 to 26,351.10. This implies there was changes in terms of their employment status from either from contractual to permanent and some was due to their promotion.

Factors that Motivate the Respondents to Pursue Graduate Studies at Capiz State University Burias Campus

Almost all or 94.74 percent of the MS respondents were motivated to pursue graduate studies at Capiz State University Burias campus due to career advancement; 89.47 percent due to personal/professional development; 57.89 percent due to promotion; 52.63 percent for salary increase; 47.37 percent believed in the quality of Professors; 42.11 percent believed in the prestige of the institution; and only 26.32 percent was due to proximity of residence and influence of peers/family.

Rate on the Teaching Effectiveness of Graduate School Faculty as perceived by the respondents

On the teaching effectiveness of professor handling courses in the MS Agronomy and Animal Science program, more than half or 63.16 percent of respondents perceived their professors to be “very satisfactory,” 26.32 percent rated “satisfactory”; and 10.53 percent perceived “outstanding.”

Mastery of the Subject Matter

As to the teaching effectiveness due mastery of subject matter, a great majority or 73.68 percent of the MS graduates rated their professors “very satisfactory,” 21.05 percent rated “satisfactory”; and 5.26 percent perceived their professors as “outstanding” due to mastery of the subject matter.

Teaching Methodology

On teaching effectiveness as to teaching methodology, more than two-thirds or 68.42 percent of the respondents perceived their professors to be “very satisfactory,” 21.05 percent rated “satisfactory” and 10.53 percent perceived their professors as “outstanding”.

Technological Competence

In terms of teaching effectiveness due to technological competence, almost three-fourths or 73.68 percent of the respondents perceived their professors as “outstanding” 15.79 percent rated “very satisfactory, and only 10.53 percent perceived their professors as “satisfactory”.

Student-Teacher Relationship

As to the student-teacher relationship of the graduate school faculty, majority or 68.42 percent of the MS graduates rated their professors to be “very satisfactory,” 26.32 percent rated “satisfactory”; and only 5.26 percent rated their professors “outstanding.”

Assessment

As to the student-teacher relationship of the graduate school faculty, majority or 73.68 percent of the MS graduates rated their professors to be “very satisfactory,” 15.79 percent rated “satisfactory”; and only 10.53 percent rated their professors “outstanding.”

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

Conclusions

Based on the result of the study, it can be concluded that CapSu has successfully attained its goal in providing advance knowledge. This is manifested by the high skills of the graduate students of academic knowledge.

Results of the study revealed that the average age of the respondents were 33 years old, mostly females, majority a holder of professional license for Agriculturist and other eligibilities, majority Agronomy major, were contractual faculty before earning Master's Degree with an average income of Php 14, 963.95.

After finishing their MS Degree, were now Instructor I position while others holding higher positions with an average income ranging Php 26,351.10.

Majority motivated to pursue graduate studies due to career advancement personal/professional development, and promotion.

After finishing master's degree they benefited in terms of personal/professional development, career advancement, and due to promotion.

Mostly of respondents believed their competencies in term of academic and technical knowledge, research capability, and team spirit/human relation were improved.

Majority of the employers rated their respective employees or MS graduates as "outstanding", while others employers rated their employees "very satisfactory." This implies that the employers were satisfied in terms of job performance of their employees or our graduates.

In terms of teaching effectiveness of professors handling courses in the MS Agronomy and Animal Science program as perceived by respondents. More than one-half of the respondents rated their professors as "very satisfactory" due to teaching skills; a great majority rated "very satisfactory" due to subject matter; two-thirds rated as "very satisfactory due teaching methodology; almost three-fourths of respondents rated as "outstanding" due technological competence; majority rated "satisfactory" due to student-teacher relationship; and nearly three-

fourths of the MS graduates rated their professors to be “very satisfactory” on teaching effectiveness due to assessment.

RECOMMENDATIONS

1. Strengthening graduate students’ capability to conduct training/seminar on information technology since, it is the least skills they acquired.
2. Maximize the different teaching skills in order to have competent graduate school faculty.
3. Offering more masteral and doctoral programs on campus and/or graduate degree programs through the distance education mode.
4. May strengthen its linkages in the field of education in identifying the skills and competencies that students must learn in order to meet the academic requirements.
