(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.) Solid Waste Management (SWM) is considered to be one of the most serious environmental issues in the Philippines. In response to its critical condition and the threat it poses to the environment and human health, the Philippine government enacted the Republic Act 9003. The law declares that the policy of the state is "to adopt a systematic, comprehensive and ecological solid waste management program". The act prohibits the establishment and operation of new open dump sites upon the act coming into force. It further States that open dump sites should be converted into controlled dumpsites by February 2004; and those converted dumpsites should be closed by February 2006. As an alternative, sanitary landfills should be developed as a final disposal site but they should be operated in accordance with guidelines presented in the act. It also promotes waste minimization through recycling, resource recovery, reuse, and composting. According to Eligio Ildefonso (2018), executive director of the National Solid Waste Management Commission, Efforts made by the government to solve the problem of waste management is still lacking. The failure to meet the targets and comply with RA 9003 arises from a lack of political will on the part of local leaders as well as a lack of discipline regarding proper garbage disposal on the part of the public. Improper wastes disposal, inefficient waste collection and lack of disposal facilities are among the dominant concerns in the country's solid waste management. Unless these are addressed, the waste generated from various sources will continually lead to health hazards and serious environmental impacts such as ground and surface water contamination, flooding, air pollution and spread of diseases.(www.woimacorporation.com) The researchers are interested to assess the waste management and strategies in Mambusao. On this premise, this study will be conducted.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned. .)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

The objective of the study is to find out the solid waste management and strategies of the respondents. Specifically, this will attempt to answer the following questions.

1. What are the profile variables of the respondents?
2. What is the level of awareness of the respondents as a whole and when grouped according to profile variables?
3. what are the the charteristics of waste produced by the respondents as a whole and when grouped according to profile variables?
4. What are the practices observed by the respondents in the disposal and management of hazardous substances or waste as a whole and when grouped according to profile variables?
5. Are there significant difference in the level of awareness, characteristics of waste produced and practices observed by the respondents when grouped according to profile variables?
6. What is the level of effectiveness of the programs implemented by the Local Government Unit (LGU) and other concerned agencies?

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of –the-art of current technology / information from which the project proposal will take-off).

Solid waste management pertains to the control of generation, storage, collection, transfer and transport, processing, and disposal of solid wastes in a manner that is in accord with the best principles of public health, economics, engineering, conservation, aesthetics, and other environmental considerations, and that is also responsive to public attitudes. However, solid waste management tend to be ignored (Masood, Barlow, & Wilson, 2009). Poor waste disposal practices hamper the progress towards an integrated solid waste management in households. Knowledge of current practices and perception of household solid waste management is necessary for accurate decision making in the move towards a more sustainable approach.(Fadhullah, 2022).

The worsening condition of solid waste creates environmental and health problems. Garbage is considered a third pollution inextricably interlocked with the air and water pollution creating environmental hazards. Improper disposal of solid wastes contribute to air, soil, and water pollution. Solid waste clogs drains, creates stagnant water for insect breeding, and causes floods during rainy seasons especially in urban areas. Insect and rodent vectors can also spread diseases such as cholera and dengue fever due to improper waste disposal (Ancheta, 2005).

Improper waste disposal, inefficient waste collection and lack of disposal facilities are some concerns on solid waste management in the Philippines (Matunog & Awa, 2013). Due to this,

			Page	Page 4 of 7

Philippines was considered as world's leading plastic polluters (WWF-Philippines, 2018). In addition, poor management of solid waste may cause health hazards to inhabitants, environmental problems such as water and soil contamination, air pollution and flooding and other socio-economic problem. In response to the challenge, San Juan (2019) revealed that participation of community members on solid waste management program depends on the action taken by their leaders or officials. More so, Al-Katib et al. (2010) emphasized that solid waste management requires technical, political, legal, socio-cultural, environmental, economic factors and available resources. The absence of any of the resources will make solid waste management program failure. Thus, the community members will be unsatisfied (Lad, Chauhan, & Gole, 2020).

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested).

This study is anchored to Zero waste theory by Anderson. It stated that Waste is anything unusable, unwanted and unrecyclable which must be avoided, not minimized or Reduced and an evidence of poor design. It focus on the utilization of the precautionary principle to eliminate potential toxins, adhere to the principle of highest and best use and recognize and address institutional and ideological barriers.

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

a) Time and Place of the Study

The study will be conducted at the municipality of Mambusao during the Academic Year 2023-2024.

b) Respondents of the Study

The respondents of the study will be the 150 respondents from the different barangays of Mambusao. Multi-stage probability sampling will be utilized in selecting 150 respondents who will be interviewed. The criteria of choosing the respondents are the following: 18 years old and above, male or female, who lived at least 6 months in Mambusao.

c) Instrument of the Study

Researcher-made questionnaires will be used in this study. The instruments will be composed of four parts. Part I will gather information on the profile of the respondents. Part II will collate data in terms of environmental control and mitigation measures implemented by LGU and other concerned agencies. Part III will collect data regarding the practices observed by the respondents in disposing and managing of hazardous substances and wastes. Part IV will gather data in terms of the level of effectiveness of the programs implemented by LGU and other concerned agencies.

d) Statistical Analysis

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
	Document Title:	RESEARCH PROPOSAL	Revision No.	00
			Effective Date	November 30, 2019
			Page	Page 5 of 7

All data that will be gathered will be analyzed using descriptive and inferential statistics.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart.

Research Objectives	Year 1									
	Nov 2022	Dec 2022	Jan 2023	Feb 2023	Mar 2023	Apr 2023	May 2023	June 2023	July 2023	Aug 2023
1. Proposal presentation and approval										
2. Data collection										
3. Data Analysis and Interpretation										
4. Writing and editing of manuscript										
5. Presentation of result at research symposia										

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

Result of this research will be used to:

1. Provide baseline information for the establishment of an effective waste management and strategies in the municipality of Mambusao.

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(16) Targets Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output.)

- a) Community
- b) LGU
- c) Researcher

(17) Personnel Requirement

Name	Role (Program, Project, Study Leader)	Field of Specialization
Jobee V. Navia	Study Leader	Mathematics
Gerard Lee L. Atienza	Co-author	English
Charina C. Gloria	Co-author	Mathematics

Percent time devoted to the Program/ Project/ Study: 2 hours per week

Program/Project Leader (in hours):

Program/Project Members (in hours):

(18) Budgetary Requirement

SOURCES OF EXPENSES	Quantity	Amount (PhP)
A. Personnel Services (For studies needed the Research Assistant, informant/s, guide)	4 enumerators	50,000.00
B. Maintenance and Other Operating Expenses (MOOE) (modify and include only whichever is applicable)		
- Transportation allowance		10,000.00
- Meal allowance during data gathering		10,000.00
- Professional fees (laboratory analysis and other related fees)		3,000.00
- Miscellaneous (for incidental expenses)		2,000.00
- Printing		3,000.00
C. CAPITAL OUTLAY		
Total		78,000.00
