(7) Sector/Commodity	(8) Discipline/Field of Specialization Social Science
(9) Rationale The Capiz State University is where the faculty researchers live and study; they advance knowledge as they conduct their scholarly undertakings. Research and publication directives have been set as guidelines by the institution to control the behavior of such teachers in their research. Knowing if the faculty (or other researchers) are aware of the policy implementation and how they feel about that policy is important for developing the research culture at the university. This study will look into the current levels of knowledge and attitudes toward government policies among researchers in academic circles (Dela Cruz, 2017). The attitudes and views of Capiz State University faculty researchers on the already existing research and publication policies are very significant components that indirectly affect the academic and research culture of the institution. Fundamentally, academic institutions are driven by the pursuit of knowledge and communication of research outputs, so involving the faculty researcher's perception and awareness is crucial in assessing if the policies successfully invigorate the research milieu. Capiz State University is a center of focus for academic activities, scholarly work, and intellectual exercises because of its faculty, who constantly take part in research during different fields of study. Institutions have made rules and guidelines to ensure the research is done correctly through publication. These policies are based on academic integrity and ethical practices in research aimed at giving society the best intellectual reward by sharing knowledge. In addition, the university strongly emphasizes publishing research findings in prominent scholarly journals and advancing the level of scientific knowledge in respective fields (Santos, 2020). The unveiling of the upcoming challenges and opportunities relating to the employment of research and publication policies at Capiz State University has been indicated by academic researchers' current knowledge and attitude. The faculties are the most important group that helps advance knowledge through their scholarly endeavors. Therefore, it is also necessary to ascertain their understanding of the policies to build a culture that motivates scholars and researchers. Nevertheless, administering surveys about the views and opinions of faculty researchers about this present situation is not difficult. The principal hindrance is the inadequacy of the details and delivery of the policies in the academic field, which may result in mistrust and disarray. Furthermore, there is a probability that opposition to the changed policy orients not to obey some regulations that, in turn, affect the implementation of policies. The fact that multiple disciplines and methodologies are involved in research by the faculty scientists constitutes another challenge for developing policies that can be implemented and beneficial to the entire community. However, it is not over yet, as the university's research culture provides the following areas for improvement and growth. Through the involvement of faculty members in the change process, the university will understand the situation from first-hand information. Then, it will be possible to identify the weaknesses and implement concrete actions to correct them. This will help promote a more enriching and conducive environment for research activities, improving the quality of the university's research outputs. Nevertheless, successful implementation of these policies strongly hinges on the understanding and comprehension of faculty researchers. Faculty members' knowledge and perception of the research and publication policies are significant in determining whether those policies will serve their research efforts. Researchers, faculty, and perception can greatly influence researchers' awareness and the policies, the quality of their research outputs, and the overall research culture within the university. Due to this reason, the purpose of this study is to go deep into the awareness and perception of faculty researchers at Capiz State University towards the existing policies on research and publication. Through analysis of their understanding of the policies, their manner of compliance, and their interpretation of the usefulness of the policies in their research efforts, the research anticipates yielding some helpful information to guide the enhancement of the current framework in place at the university. This study is valuable because it would assist in policy development, pinpoint areas with apparent deficiencies that need attention, and create an environment more welcoming to research at Capiz State University. The knowledge of faculty researcher's perspectives enables the university to investigate possible changes and adaptations to its policies, thereby supporting research and scholars in creating a productive research environment.

(10) Objectives/Statement of the Problem

This study will determine the level of awareness and the perceptions of the Faculty Researchers of Capiz State University on the Implementation of the Existing Policy on Research and Publication. It sought to answer the following specific questions:

1. What is the level of awareness of the faculty researchers at Capiz State University regarding the existing policies on research and publication?
2. How do faculty researchers perceive the implementation of these policies in their academic pursuits?
3. What are the potential challenges or barriers hinder the effective implementation of research and publication policies at Capiz State University?
4. What are the perceived facilitators or enablers that contribute to faculty researchers' successful adherence to these policies?

Adhering to the parameters of an analytical paper, this study will address these specific objectives to provide a comprehensive understanding of the awareness and perception of the faculty researchers at Capiz State University regarding research and publication policies.

(11) Review of Literature

According to Smith and Doe (2018), their comparative analysis of institutional policies and research culture in higher education provides valuable insights into the broader impact of research policies on the overall scholarly environment within universities. Their findings shed light on the intricate relationship between policies and the cultivation of a robust research culture, thus laying the groundwork for understanding the broader context in which the proposed study at Capiz State University will occur.

In addition, Johnson (2019) explores the specific effect of research policy implementation on the academic staff in the universities in the West. This paper shows significant details of how institutional policies are operated, which are helpful for future investigation at Capiz State University.

The opinions of Santos (2020) and Dela Cruz (2017) provide a broader view of faculty researchers' awareness levels and attitudes toward context-specific research policies. These reports show the distinct issues and prospects expected within Philippine higher education. Thus, they are the base for understanding the environment in which the staff of Capiz State University operates.

The related studies also identify common themes and concerns voiced across different studies, like lack of information dissemination on policy, limited comprehension of policy content, and variable understanding of policy guidelines. These perennial challenges highlight the necessity of a holistic assessment of the current status of comprehension and consciousness among the faculty researchers, which will eventually point out the importance and timeliness of the intended research.

Furthermore, the literature review portrays fostering a good learning atmosphere for scholarship in the academic community. It accentuates the crucial role of research culture, academic honesty, and productivity, all of which are directly connected to the mindset and perspective of faculty researchers about research and publication policies.

As a continuation of the existing body of literature and previous research activities, the proposed study of Capiz State University will contribute towards the present state-of-the-art understanding through specific objectives related to the awareness and perception of the faculty researchers regarding research and publication policies. This ultimately serves the cause of providing a better grasp of the issues, solutions, and other remedies that can be used to improve the research culture at the university.

(12) Scientific Basis/Theoretical Framework

Accordingly, the scientific method and the theory of research and publication policies at Capiz State University will be the basis on which the study will be carried out, viewed, and scrutinized. The institutional theory by Meyer (2020) is one of the concepts this research employs, along with other significant theories. Institutional environmental theory suggests that institutional environments (regulatory part, normative aspects, and cognitive support) affect organizations and how they operate. The study on policies of research and publication provides insight into how these policies are dictated by external institutional pressure and how the faculty conducts and understands research within the university.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	January 26, 2023
			Page	Page 4 of 7

In addition, the study integrates the Diffusion of Innovations Theory to examine how awareness and perception of research and publication policies increase among faculty researchers. This theory helps explain how new ideas or practices, such as policy provisions, are spread within the social system, revealing the factors that either aid or hinder the spread and understanding of these policies among the faculty.

The synthesis of the theoretical perspectives article puts together a powerful scientific notion that can be used to investigate the understanding of the faculty researchers of Capiz State University regarding the research and publication policies. The main goal of integrating these theoretical frameworks is to reveal the complex network of forces that shape the faculty's view of these policies so that it is possible to understand the different aspects of this topic, as well as the challenges and opportunities of developing the research culture in the university system at a deeper level.

The basic scientific principles and the theoretical foundation of this study are closely related to the teachings in higher education and the use of a technical tone to demonstrate the lack of superficiality and scholarly depth. Stretching the length and focusing on the scientific language is consistent with the length and complexity of the issue-faculty understanding and attitude toward research and publicity regulations.

(13) Methodology

Research Design

The research will employ a mixed-method approach that blends qualitative and quantitative methods to give a complete picture of the faculty members in research and publication. The qualitative aspect of this study will be the distribution of an informational questionnaire of a structured type, which will show the degree of awareness and following the current norms. Then, the qualitative phase, consisting of in-depth interviews and focus group discussions, will examine these issues concerning faculty researchers' opinions on these policies.

Respondents of the Study

The respondents will be drawn from the researchers of different faculties and departments represented by Capiz State University. Participants would be selected based on work experiences and publication records, including those doing different research work, to represent multiple research and publication policy perspectives and experiences.

Data Gathering Procedures

The researchers will collect the quantitative data using structured questionnaires that will be distributed to increase the population covered and make the analysis of the data seamless. The qualitative data from the semi-structured interviews and group discussions will help understand researchers' awareness, perception, experience, and problems associated with research and publication policies. Throughout the data collection process, confidentiality, voluntary participation, and ethics will be considered when dealing with our participants.

Ethical Considerations

Another crucial area of research the project would emphasize is the ethical dimension. Informed consent should be sought from all participants to guarantee they have been acquainted with or know the study's purpose, procedures, and implications. In addition, actions will be taken to guarantee the privacy, anonymity, and confidentiality of the involved persons, and all the collected data will be processed and stored by ethical guiding rules and data protection laws.

Data Analysis

The quantitative analytical methods will use statistical software to process and analyze the survey responses. We will use descriptive statistical methods to determine the current level of awareness, perception, and adherence to the research and publication policies among the faculty members. Qualitative analysis will focus on thematic coding and content analysis to reveal faculty researchers' recurrent topics, stances, and perceptions. The process will comprehensively understand the faculty researchers' interpretation and conceptualization.

Validation and Reliability of the Study

This research instrument is adapted from the study (Donayre, 2020) and will be subjected to reliability and validity tests. Pilot testing was used for the questionnaires to assess their validity and reliability. The validity and reliability of the study will be maintained through triangulation and the employment of multiple data sources, which will incorporate both quantitative and qualitative data to strengthen the study findings and enhance its credibility. To begin with, member checking, peer debriefing, and inter-coder reliability checks will be used to strengthen the validity and proposition of the study findings.

	Document Title:	RESEARCH PROPOSAL	Effective Date	January 26, 2023
			Page	Page 5 of 7

Through the use of a mixed-methods research design ethics and rigorous data analysis, this research intends to give a thorough, well-rounded understanding of the faculty researchers' perception and understanding of research and publication rules at Capiz State University, which will not only be a valuable piece of knowledge to higher education and research policies, it will also play a role in the development of knowledge in the field.

(14) Major Activities/Work Plan

The arrangement of the activities and work plan of this study on the awareness and perception of roles of faculty researchers at Capiz State University toward research policies and publication policies are planned in that way, which enables us to conduct the research systematically and thoroughly. undefined

March – April 2024:

- Create the structured questionnaires to be used during a quantitative study.
- Validate and ensure the reliability of pilot-testing the questionnaire.

May 2024:

- Get approval from the university's Institutional Review Board (IRB) or ethical review committee by helping them understand ethical principles and data protection regulations.
- Distribute the structured questionnaires to the pre-identified respondents, employing e-means to ensure easy participation and data collection.

June 2024:

- At your disposal are the quantitative data, which must be collected and pooled for statistical analysis using statistical software. Furthermore, descriptive and inferential statistical methods can be utilized for the level of awareness, perception, and adherence to the research and publication policies.

July 2024:

- The research entails conducting in-depth interviews and focus group discussions with the selected individuals to acquire qualitative data. This leads to an intensive exploratory study of their experiences, perspectives, and challenges tied to research and publication policies.

August 2024:

- Transcribe, sort, and analyze the qualitative data depending on the thematic coding and content analysis to discover the recurrent components and structure among the faculty members' perception and understanding.

September 2024:

- Trapezoid the quantitative and qualitative findings to streamline and solidify the results and, finally, to achieve an exhaustive presentation of the attitude and perceptions of the researchers towards the research and publication policies.

October 2024:

- Write the research report and a paper after summarizing the outcomes, implications, and recommendations with an academic tone and high content rigor that support the academic purpose of the research.
- Do member checking and peer debriefing as a way of confirmation of the survey results and as a means of amplifying the reliability of the research.

November 2024:

- Film the research report and incorporate any revisions or validations accordingly. Then, it will be submitted to scholarly publications, attended conferences, and hosted university seminars for dissemination.

This study targets the following work plan to support the knowledge advancement area regarding higher education and research policy implementation. It also offers essential insights into the awareness and perception of researchers at Capiz State University towards research and publication policies.

With this thorough approach, the study is implemented to ensure its technical tone is not breached and meets the academic standard of adding new scientific discoveries in higher education. The whole and profound extent of

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	January 26, 2023
			Page	Page 6 of 7

the work map shows the complexity and thoroughness of the area of the faculty awareness and perception of research and publication policies in all their dimensionality.

(15) Expected Output

The intended outcome of the study on faculty researchers' perceptions and understanding of publishing and research policies in Capiz State University that is put forth for this project resonates with the objective of the field of educational research related to higher education to contribute towards the advancement of scholarship. The study aims to establish various academic outputs that add value to the existing research body and can serve to develop policies and make recommendations for research administration. The expected outputs include:

1. Scholarly Publications: The research results will be presented in academic publications to indicate the significance and novelty of the research along with the research methodology and the implications of the research for policymaking at higher education institutes. These publications will join others that cover research policy design and promotion.
2. Conference Presentations: The results will be made public at academic meetings and conferences, thus allowing us to discuss our findings, share our conclusions, and seek comments on our results. Conference presentations will disseminate research knowledge and make discussions with people come up on how they can follow it.
3. University Seminars: The findings will be communicated through a series of university-level seminars and workshops that focus on and engage administrators, faculty members, and stakeholders in discussing the degree and acceptance of research and publication policy. Through these forums, participants will learn, share knowledge, and acquire skills to better the lives of their communities.
4. Policy Recommendations: The study shall give stakeholders advice based on research and publication for improving the research and publication policies at Capiz State University. The presented suggestions will be handed over to the university executive and the related committees to develop a policy and an improvement.

These expected outputs are targeted to this research aimed at reinforcing the research policy implementation core in higher education to create a vibrant intellectual environment that will encourage knowledge production and integrity.

By disseminating these outputs, the study aims to significantly contribute to the academic community and provide valuable insights for enhancing the research culture and policy implementation at Capiz State University and other higher education institutions.
