

Research Capability Building and Peer Mentoring For Basic Education Teachers

Sandra Baticados-Escabarte
Proponent

Capiz State University-Pontevedra, Capiz
sbescabarte@gmail.com

Name of Project : *Research Capability Building and PEER mentoring for Basic Education Teachers*

Nature of Project : **Literacy** (Training-workshop on Writing the Research Paper and the Research Process)

Proponent : Dr. Sandra b. Escabarte

Co-Proponent : **Dr. Judel V. Protacio, Dr. Christy B. Agnas**

Implementing Agency : CapSU Pontevedra Campus –College of Education Arts and Sciences- Graduate School Program and Extension Department

Collaborating Agency : Department of Education-Division of Capiz

Banner Program : LITERACY

Recipient : Basic Education Teachers

Target No. of Recipients : 50

Duration : 3 months

Target Date : September 24-Dec. 24, 2022

Total Cost : P 83, 250.00

Training Staff : Dr. Judel V. Protacio
Dr. Christy B. Agnas
Dr. Rossandrew Villaruel
Dr. Louis Placido, Lachica
Dr. Abelardo Y. Bermejo
Dr. Evageline A. Ramos
Dr. Matilde C. Tonel
Dr. Mary Ann L. Decrepito
Dr. Cheryll Ann Gicana
Dr. Napoleon Albor
Dr. Jereline De Pablo
Dr. Rosipico Tupaz
Dr. Ralph John I. Fayo
Prof. Maou D. Basquez
Prof. Alvin D. Tenorio
Prof. Ricaflor Avila
Prof. Francis John Degal
Prof. John Paul Araneta
Prof. Michael A. Bañas
Prof. Krotchiv F. Apolinario
Prof. Andy Bon D. Dariagan
Mr. Jiro D. Bangud
Ms. Mahyt Cañas

I. RATIONALE

Cultivating a research-based approach in developing an educational practice provides evidence to effect change in the teaching, the school and classroom environment, and beyond. (Austin, 2016) Research is an indispensable tool in promoting education not only inside the classroom but in all walks of life. Discoveries in technology, innovation, products and even practices that we enjoy are concrete proof that research plays an important role in human life. Human existence is being backed up by research as it labors to discover medicines that can cure illness and suppress the spread of deadly diseases. As the world struggles to preserve life over Covid-19, research took the frontline to face the challenge.

The role that research plays challenges everyone to be knowledgeable in the field and take our own share to promote the process. Since school is the best venue for education, the community hopes that students are honed in conducting the research process. This expectation is an added burden to the teachers as they embrace the task of educating the students. Aside from the necessary knowledge that students should learn, they are expected to be research wise too. Teachers are challenged to meet this expectation that the community has posted on them.

To help teachers cope with the situation, DepEd made an effort to strengthen research culture in the system. Abarro (2018) stated that despite the effort of DepEd teachers find hard times embracing the research culture. They were found to perform the research process moderately.

In a recent study conducted by Escabarte (2022), it was found out that the secondary school teachers are generally *Good in* performing the research process. However, it was noted that respondents performed low in some skills which need to be improved. In order to address this need and help secondary school teachers to capacitate themselves in research, this intervention program was developed.

Result of the study was submitted to the Senior Education Program Specialist in Research and Planning of DepEd Capiz Division which in turn informed the different national high schools of the outcomes of the study. One of the national high schools wrote a letter asking the extension department of Capiz State University Pontevedra, Campus of an intervention which can help them improve their skills in the research endeavor. This makes Feliciano Yusay Consing National High School the pilot beneficiary of the training.

II. OBJECTIVES

The program aims to acquaint secondary school teachers on the preparation and conduct of the different phases of the research process. More particularly, at the end of the training participants are expected to:

1. get acquainted with the processes in writing and conducting the different phases of the research process;
2. write research proposal on situation they wished to investigate;
3. conduct collaborative research studies with other secondary school teachers;
4. gather and analyze data as well as interpret tests results;
5. package research results into publishable form; and
6. present research findings in research symposia and conferences.

III. METHODOLOGY

Program Description

This training program is conceptualized to address the research needs of the secondary school teachers in the division of Capiz. It aims to help teachers to increase their research capabilities as they facilitate learning of their students in response to the growing challenge of global development.

This training program is anchored on the extension banner program of the College “L.I.T.E.R.A.C.Y. (Learning Integrated in Teaching Educational, Research-Based and Sustainable Approach in Educating Adults, Children and Youth) which is to be facilitated by the graduate school students enrolled in the Doctor of Education-Educational Management; Master of Arts in Education – Science, English, Social Studies, Mathematics, Filipino and Educational Management programs. It features

functional literacy as it facilitates the use of special approaches for effective learning and managing learner’s development through alternative learning skills.

It embodies the graduate school program outcomes of in-depth understanding of the complex and coherent body of knowledge and skills in an area of study in education. These program outcomes may be applied in many types of school or other vocational environment as it adheres to the extension agenda of *University*

Towards Youth's Intellectual, Educational and Leadership Development Program (U-YIELD). The program emboldens the college's extension objectives of collaboration and establishment of linkages with NGOs, GOs, POs, LGUs and other private and public institutions and/or agencies for efficient and effective delivery of extension services.

Program Cycle

The training program is anchored on the research study "Research Capability, Engagement and School Practices of the Secondary Teachers". Skills included in the training were identified from the indicators in each of the four phases of the research process. Those three bottom skills are considered weaknesses of the respondents that need to be developed through an intervention.

Feedbacking. Result of this study was submitted to the Research Education Specialist for implementation and/or adoption. As agreed prior to the conduct of this study, a collaborative intervention between DepEd, Division of Capiz and Capiz State University, Pontevedra Campus will be conducted. No revision on the existing Implementing Rules and Guidelines in the conduct of research of the secondary school teachers will be made by the collaborating agency (CapSU). Template on the conduct of action research used by DepEd Capiz Division will be strictly followed during the intervention. Furthermore, the existing research colloquium conducted by the SDO Capiz will still be in forced. Capiz State University will conduct a separate in-house and research symposium to follow the course of the extension program as one of its requirements. Existing team with their respective team leaders organized by the research team of DepEd Capiz division will be adopted. Capiz State University Extension team intervention is limited only to technical assistance as teacher- participant write their research proposal, conduct the study, write their research results as well as packaged their research paper for presentation and publication.

Planning. Careful planning followed. Various concerns were taken into consideration which include: the invention to be adopted, the manner of implementation, the people involved, the duration of the program as well as the budgetary allocation.

Implementation. Implementation of the intervention will include all activities that will be conducted for the purpose of achieving the objectives set for the program. The program will cover a duration of three years starting from its launching to its termination.

Evaluation. Upon completion of the intervention program, an evaluation will be conducted. It will focus on the effectiveness of the program through the assessment of the participants who will be asked to rate whether the program has successfully transferred the skills needed by the participants. This will form as the basis whether a re-planning is needed after the conduct of the intervention.

Monitoring. Monitoring stage is the period given to the beneficiaries to put into practice what they have learned in the training. This is the point where application of all the knowledge gained and skills developed by the beneficiaries will be put into practice. They are made to engage in activities where these skills are needed. To make sure that beneficiaries are kept on the right track, proponent's monitoring team will visit on a regular basis to check and address any concerns of the beneficiaries that may arise.

Impact Assessment. Over a period of time where beneficiaries are observed to possess the skills they have developed from the training, an impact assessment will be conducted. If result of the assessment would show that the beneficiaries can sustain the skills they have without the aid of the program proponent, the program will be terminated.

Figure 1: Cycle of the Program

Implementation of the Program

The program will be implemented using a lecture - workshop scheme. This will be composed of topics representing the four phases of the research process (i.e. conceptual, empirical, analytical and dissemination phase). Selected skills will be discussed under each phase. Seven days will be consumed for the entire duration of the program divided into different topics representing the four phases of the research process. Each session will be divided into three parts: first the lecture; second, workshop; and third, the open forum. The participants are expected to come up with a proposal and have it presented on the culmination day of the program. Participants will be encouraged to develop the said proposal into a full blown research under the assistance of the proponents of the program. During monitoring, beneficiaries and the monitoring team will discuss concerns that may arise during as they conduct the study. A symposium will be done to evaluate the progress of the program for the first year of its implementation. The two succeeding years will be spent for two activities; an in-house review at the first quarter of each year and a symposium at the last quarter of each year. After three years, an impact assessment will be conducted to know whether the program has been successful in achieving its objectives. The result of the assessment will be the basis of the proponent whether to terminate or conduct a re-training as results revealed.

IV. ESOURCE REQUIREMENTS

A. Resource Persons

Date	Time	Topic	Resource Persons	Facilitators
Week 1 Sept. 24, 2022	9:00-12:00	Program Launching and MOA Signing		Project Proponents
	1:00-3:00	Pre-Test Administration		
Week 2 Oct. 1, 2022	8:30-12:00	Action Research Question	Dr. J. Protacio Ms. Ma. Bambi B. Billanes	Dr. S. Escabarte Dr. E. A. Ramos Prof. J.P. Araneta
	1:00-4:00	Innovation, Intervention and Strategy	Prof. A. Tenorio Ms. M.T. Dayang	Dr. M. C. Tonel Prof. A. B. Dariagan MAEd Soc. Stud. Students
Week 3 Oct. 8, 2022	8:30-12:00	Participants Sources of Data and Information	Prof. R.C. Daliva Ms. E. Borja	Dr. M.A. Decreposito Mr. Jiro Bangud MAEd Eng. Students
	1:00-4:00	Data Gathering Methods	Prof. M. D. Basquez Ms. M. F. Buayan	Dr. N. Albor Prof. M. Bañas MAEd Sci. Students

Date	Time	Topic	Resource Persons	Facilitators
Week 4 Oct. 15, 2022	8:30-12:00	Data Analysis & Interpretation A. Quantitative	Dr. R. Daliva Ms. M.A. Rufo	Dr. R. J. Mayo Ms. Mahyt Cañas MAEd MM Students
		B. Qualitative (FGD & In-Depth Interview)	Prof. A. Tenorio Ms. C. Arroyo	Dr. J. De Pablo Prof. N. B. Dima Prof. V. Francisquite
	1:00-4:00	Results and Discussion A. Findings B. Recommendation	Dr. L.P. F. Lachica Mr. Jose Fuentes	Dr. C.A. Gicana Prof. K. Apolinario MAEd Math Students
Week 5 Oct. 22, 2022	8:30-12:00	Action Research Work Plan and Time Line	Dr. E. Ramos Ms. Zeny Badason	Prof. R. Avila Prof. F. J. Degala MAEd Fil. Students
	1:00-4:00	A. Plan for Dissemination and Utilization B. Policy Note	Dr. R. Villaruel Mr. J. Descalzota	Dr. R. Tupaz Dr. Fe Mae Laborte EdD. Students
Week 6 Oct. 29, 2022	8:30-12:00	References	Dr. C. Agnas Mr. Joven Dais	Dr. C.G. Daquin Prof. F. J. Degala
	1:00-4:00	• Critiquing of Outputs • Feedbacking		Extension Department COEAS Faculty, EdD, MAEd Students
Week 7 Nov.5, 2022		• Proposal Presentation • Post Test		Program Proponent
Nov. 12, 2022- September, 2023		Conduct of the Study		Program Proponent
Oct. -Nov. 2023		Writing the Research Report		Program Proponent
December, 2023		Research Symposium		Program Proponent
January, 2024		In-House Review		Program Proponent
December, 2024		Research Symposium		Program Proponent
January, 2025		In-House Review		Program Proponent
December, 2025		• Research Symposium • Impact Assessment		

C. Team Leaders (Participants)

Master Teacher II
Dominggo M. Locsin Elem. School

Mark M. Belloga
Master Teacher I
Pandan Elementary School

V. BUDGETARY REQUIREMENTS

Capiz State University as the proponent of the extension program will provide the following items stipulated below including the technical aspects of the training.

Item	Unit	Unit Price	Quantity	Total
Tarpaulin	Piece	500.00	4	2,000.00
Snacks				
A.M. (70 heads x 7 days)		50.00	490	24,500.00
P.M. (70 heads x 7 day)		50.00	490	24, 500.00
Lunch (15 heads x 7 days)		250.00	105	26,250.00
Token	Piece	500.00	12	6,000.00
TOTAL				83,250.00

Capiz Division collaborating school(s) will provide the venue and facilities needed in the training. Furthermore, they will be responsible for the identification and attendance of the identified participants to the training.

VI. Impact of the Training on the Research Capability of Beneficiaries

A. Quantitative Impact

Presented in Table 1 are the pre-training and post-training capabilities of the extension beneficiaries in the phases of the research process. There is an observable positive impact of the training on the overall and specific aspects of the research process from *Below Expectation* ($M = 2.37$) level before the training to *Above Expectation* ($M = 3.74$) level after the training. Among the four major stages identified, the participants indicated to have developed a better grasp of the approach in the Conceptual Phase ($M = 3.83$), which indicates coordinated progress of their performance since this is the very first stage of conducting research. This was followed by the ability in the Empirical Phase ($M = 3.74$) and Dissemination Phase ($M = 3.70$). The result in Analytical Phase ($M = 3.65$) suggests further room for training and practice for the beneficiaries, and thus, sustained implementation of the project is an ongoing process.

Table 1. Pre-training and post-training research capabilities of the beneficiaries in the phases of research process.

PHASES OF THE RESEARCH PROCESS	PRE-TRAINING ASSESSMENT			POST-TRAINING ASSESSMENT		
	M	VD	I	M	VD	I
1. Conceptual Phase						
a. I can identify specific research problem I wish to investigate.	2.38	Fair	Below expectation	4.10	Very Good	Above Expectation
b. I can put forth an argument as to why the problem is worthy of investigation.	2.41	Fair	Below expectation	4.05	Very Good	Above Expectation
c. I can formulate specific research questions I wish to pursue.	2.31	Fair	Below expectation	3.74	Very Good	Above Expectation
d. I clearly see relationship to investigate and identify the related variables.	2.36	Fair	Below expectation	3.67	Very Good	Above Expectation
e. I can interpret related existing expert opinions and studies related to the study.	2.28	Fair	Below expectation	3.87	Very Good	Above Expectation
f. I can summarize the existing research literature on the problem.	2.26	Fair	Below expectation	3.77	Very Good	Above Expectation
g. I can identify the specific method(s) to employ to measure research variable(s).	2.38	Fair	Below expectation	4.00	Very Good	Above Expectation
h. I can identify the population to which the results of the study may legitimately be generalized.	2.46	Fair	Below expectation	3.92	Very Good	Above Expectation
i. I can design a sampling plan.	2.38	Fair	Below expectation	3.97	Very Good	Above Expectation
j. I can decide on the finality of the research plan to be followed.	2.33	Fair	Below expectation	3.62	Very Good	Above Expectation

	PRE-TRAINING ASSESSMENT			POST-TRAINING ASSESSMENT		
PHASES OF THE RESEARCH PROCESS	M	VD	I	M	VD	I
k. I can describe, indicate the relevance and construct instrument(s) to be used in data gathering.	2.41	Fair	Below expectation	3.51	Very Good	Above Expectation
l. I have functional vocabulary in formulating and skillful enough in ordering questions.	2.41	Fair	Below expectation	3.74	Very Good	Above Expectation
TOTAL	2.37	Fair	Below expectation	3.83	Very Good	Above Expectation
2. Empirical Phase						
a. I know how to conduct a pilot study and make necessary revisions.	2.31	Fair	Below expectation	3.36	Good	Within Expectation
b. I know how to conduct a pilot study and make necessary revisions.	2.31	Fair	Below expectation	3.36	Good	Within Expectation
c. I can apply appropriate sampling procedures.	2.36	Fair	Below expectation	3.82	Very Good	Above Expectation
d. I can follow the prescribed steps/procedures in data gathering.	2.54	Good	Met expectation	4.00	Very Good	Above Expectation
e. I can blend in with the varying personalities of the respondents.	2.56	Good	Met expectation	4.05	Very Good	Above Expectation
f. I can rephrase questions to suit the level of the informants.	2.54	Good	Met expectation	3.77	Very Good	Above Expectation
g. I can give probing follow-up questions to extract the needed information from the informants.	2.51	Good	Met expectation	3.72	Very Good	Above Expectation
h. I can religiously take down field notes according to the flow of conversation.	2.51	Good	Met expectation	3.69	Very Good	Above Expectation
j. I can operate gadgets when needed in gathering data.	2.51	Good	Met expectation	3.69	Very Good	Above Expectation
k. I have the patience and the determination to gather all the necessary data and information needed in the study.	2.62	Good	Met expectation	3.82	Very Good	Above Expectation
i. I can transcribe data.	2.41	Fair	Below expectation	3.46	Good	Within Expectation
TOTAL	2.49	Fair	Below expectation	3.74	Very Good	
3. Analytic Phase						
a. I can prepare data for further analysis coding, and cleaning.	2.36	Fair	Below expectation	3.67	Very Good	Above Expectation
b. I can describe the procedures in analyzing the given set of data.	2.31	Fair	Below expectation	3.72	Very Good	Above Expectation
c. I can identify the statistical tools to be used and describe why these procedures are appropriate.	2.26	Fair	Below expectation	3.59	Very Good	Above Expectation
d. I can present data in tabular form.	2.31	Fair	Below expectation	3.72	Very Good	Above Expectation
e. I can discuss data in textual form.	2.31	Fair	Below expectation	3.85	Very Good	Above Expectation
f. I can perform reduction of qualitative data for theme identification.	2.28	Fair	Below expectation	3.67	Very Good	Above Expectation

	PRE-TRAINING ASSESSMENT			POST-TRAINING ASSESSMENT		
PHASES OF THE RESEARCH PROCESS	M	VD	I	M	VD	I
g. I can group data according to themes.	2.28	Fair	Below expectation	3.79	Very Good	Above Expectation
h. I can anchor/connect the result to the theoretical framework/literature.	2.28	Fair	Below expectation	3.44	Good	Within Expectation
i. I can interpret results from statistical/qualitative analysis of data.	2.26	Fair	Below expectation	3.59	Very Good	Above Expectation
j. I can draw inferences and implications from the result of data analysis.	2.31	Fair	Below expectation	3.51	Very Good	Above Expectation
TOTAL	2.29	Fair	Below expectation	3.65	Very Good	Above Expectation
4. Dissemination Phase						
a. I can explain and communicate research findings.	2.41	Fair	Below expectation	3.64	Very Good	Above Expectation
b. I can describe the appropriate use of the findings of the study.	2.36	Fair	Below expectation	3.72	Very Good	Above Expectation
c. I can write a publishable form of my research paper.	2.26	Fair	Below expectation	3.62	Very Good	Above Expectation
d. I find means on how to look for linkage to other professional organization where I can present the findings of my study.	2.26	Fair	Below expectation	3.87	Very Good	Above Expectation
e. I can find linkage with research journals and publications where I can publish my research findings.	2.28	Fair	Below expectation	3.67	Very Good	Above Expectation
TOTAL	2.31	Fair	Below expectation	3.70	Very Good	Above Expectation
GRAND TOTAL (OVERALL RESEARCH CAPABILITY)	2.37	Fair	Below expectation	3.74	Very Good	Above Expectation

Legend: M – Mean, VD – Verbal Description, I – Interpretation

Interpretation is based on the following scale:

Numerical Rating		Verbal Description	Interpretation
Score	Mean Range		
5	4.50 – 5.00	Excellent	I can write/conduct the phase /process of research being described expertly.
4	3.50 – 4.49	Very Good	I can write/conduct the phase/research process being described as above expectation.
3	2.50 – 3.49	Good	I can write/conduct the phase/process of research being described as within expectation.
2	1.50 – 2.491	Fair	I can write/conduct the phase/process of research being described below expectations.
1	1.00 – 1.49	Poor	I cannot write/conduct the phase/process of research being described.

B. Qualitative Impact

Having completed the training on the different phases of the research process, beneficiaries shared perceptions on how the project helped them:

Increased Conceptualization Skills

PT1 (Altess B. Pagayon):

“I learned that in order for us to conceptualize the research problem, we should first accomplish those tool kits for the analysis, critical thinking, the problem tree, the opportunity tree, and the decision-making model.

I learned to differentiate strategy from innovation, then, I learned insights that can help me conduct research.

These learnings that I have gained from this training can help me conceptualize in making research study of course by applying those insights that I have gained from the training. For example, on how to create a research problem, first, I need to accomplish those tool kits, then I need to look for a suited intervention for my study.

Aside from that, I can now follow steps on how to conduct research. I can now interpret data and make impressions out of that. For short, I can now do research.”

This claim has been supported by one of the beneficiaries. According to him:

Enhanced Knowledge on Research Methodology

PT2 (Joe Mari Sarabia):

“I find it really very advantageous and really very helpful to us because as teachers we do need really some innovations, improvement so this could really help us a lot. About the identification of problem, there are really a lot of problems to be solved inside the classroom.

So for me, intervention is very much helpful to both academic and behavioral problems in a certain classroom because it is giving us some improvement in such problem. Innovation is something that could be used to lighten the burden and some problem in the field of education.

Makes me really prepared for any say for example such title, such problem and of course conceptualizing, formulating and analyzing data as well as interpreting. I can now do the whole action research study.

After attending this training, I can rate myself a rate of 8 than before which is 4.

Another respondent shared his insights on how the project helped him.

Improved Research Skills

PT3 (Manny Dorado):

“It lay down beneficial insights for me to conceptualize and implement the strategy. Before the training, I can rate myself a 2. After the training maybe I can say it’s already 8 because I already know the steps how to conceptualize research problem and what to do after that. I gained knowledge on the entire research process. I gained knowledge on how to select appropriate tool which is very important in conducting research. I know now how to handle data and draw inferences out of the findings.”

The training is so beneficial to us as a classroom teacher because we have a lot of problem that we encountered inside the classroom. So through this training, we will be guided and through

the steps I have learned from the training . . . so we will be guided how to address these problems.”

VII. Lessons Learned

The above findings suggest the following outcomes of the extension project:

1. The beneficiaries gained substantial knowledge on the different phases of the research process after attending the training. They are now capable of preparing the action research manuscript, conduct the study as well as packaged their research paper for presentation.
2. The beneficiaries' increased capability in conducting research is visible across demographic profile such as sex, age, length of service and academic position as seen in the increase of perceived capabilities in all indicators.
3. The gained knowledge and skills in conducting research after attending the training has provided the beneficiaries the confidence and opportunity to set their career trajectory to a research-informed teaching practice and other professional activities.

VIII. Recommendation

1. The effectiveness of the training demonstrated by the beneficiaries suggests further and sustainable strategies to widen and deepen the scope of the implementation of the project to include replication of the training in other districts of Capiz.
