(9A) Abstract

The language portfolio is the collection of the participants' outputs in ESP and highlights their academic achievements and realization in the pursuit of English language proficiency. This quasi-experimental study was conducted to measure the effectiveness of the use of language portfolios on the academic performance of eleven (11) sophomore English majors in English for Specific Purposes (ESP). The study was conducted at the College of Education, Arts & Sciences Teacher Education Department from the 1st to 2nd semester of the school year 2022-2023. Researcher-made survey checklist, pretest, and posttest materials were utilized as data gathering tools; ranks, standard deviations, and t-tests for independent and dependent samples were the statistical tools used. Reading comprehension, listening comprehension, and writing essays were the academic needs of the participants, while application letter writing, filling out DepEd forms, and SMS/chatting applications were their occupational needs. They needed activities like problem-solving, citing/referencing, and film showing for academic purposes. At the same time, simulation, conducting symposia/fora, and attending seminars/training were the activities they needed for occupational purposes. A language portfolio is an effective tool for improving the participants' performance in ESP. The two groups did not perform equally after introducing the language portfolio. The participants performed differently in the pretest and posttest, respectively, regardless of their treatment received. A framework crafted out of the study's results may be enhanced before its use as a guide in making or revising a syllabus for ESP. A set of language portfolio guidelines may also be adapted to improve students' performance in ESP.

(9B) Keywords

language portfolio, English for Specific Purposes (ESP), quasi-experimental, language needs, academic purposes, occupational purposes

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

In compliance with CHED Memorandum Order No. 75, series of 2017, known as the *Policies, Standards, and Guidelines for Bachelor of Secondary Education (BSEd)*, Capiz State University has streamlined and harmonized its curriculum across all campuses and programs with reference to the prescribed courses of the Commission on Higher Education (CHED) for Bachelor of Secondary Education (BSEd) with specialization in English.

English for Specific Purposes (ESP) is one of the specialization courses in the BSEd English curriculum. The objective of English for Specific Purposes (ESP) is to prepare students academically and professionally as they embark into the world of employment. Developing the pre-service students' macro-skills may only be possible by exploring their specific needs and interest. To offer a more functional, relevant, and responsive curriculum, the students' language needs should be milked first before course facilitators can design their syllabi fitted to their students' multiple intelligences and pacing.

A language portfolio is a collection of the students' outputs highlighting their relevant accomplishments and training within the school's undertakings. The more hardworking and diligent the students are, the more outputs they can produce and reflect in their language portfolio.

With the results of this study, the researchers would be able to utilize a language portfolio as a tool in teaching English for Specific Purposes (ESP) to improve students' academic

	Document Type:	Document Code	RES- CR-01
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 3 of 18

performance and develop their life skills and talents more than speaking, reading, listening, and writing. Moreover, a framework and guidelines in language portfolio preparation that will be crafted from the results of the study are deemed beneficial for both the students and the course facilitators for future utilization.

Statement of the Problem

The main purpose of this study is to delve into the effect of using a language portfolio as a tool in English for Specific Purposes (ESP).

Specifically, it also aims to answer the following questions:

1. What are the language needs of the participants when classified into:
 - a. academic purposes; and
 - b. occupational purposes?
2. What activities are needed by the participants to improve their performance in English for specific purposes when classified into:
 - a. academic purposes; and
 - b. occupational purposes?
3. What is the performance of the experimental group in English for Specific Purposes (ESP) using the language portfolio compared to the control group before and after the intervention?
4. Is there a significant difference between the performance of the experimental and the control group using a language portfolio?
5. Is there a significant difference in the pretest and posttest of experimental and control groups?
6. What framework can be developed from the results of the study?
7. What language portfolio guidelines can be formulated from the results of the study?

Null Hypothesis

1. There is no significant difference between the performance of the experimental and the control group using a language portfolio.
2. There is no significant difference in the pretest and posttest of the experimental and control groups.

Theoretical Framework

The study is anchored on constructivism which aims to develop intrinsically motivated and independent learners adequately equipped with learning skills for them to be able to construct knowledge and make meaning of them. In constructivism, knowledge is not simply deposited by the teacher into the empty minds of the learners. Rather, knowledge is constructed by learners through an active, mental process of development; learners are the builders and creators of meaning and knowledge since their minds are not empty but full of ideas.

Likewise, it is linked to constructionism as a constructivist learning theory and theory of instruction. It states that building knowledge occurs best through building things that are

	Document Type:	Document Code	RES- CR-01
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 4 of 18

tangible and sharable (Ackerman et al., 2009 in Edutech Wiki, 2019). “Constructionism (in the context of learning) is the idea that people learn effectively through making things. Constructionism is connected with experiential learning and builds on some of the ideas of Jean Piaget” (Edutech Wiki, 2019).

Conceptual Framework

Utilization of a language portfolio is believed to affect the student's performance in English for Specific Purposes (ESP). If using a language portfolio enriched the student's academic performance, then the said strategy is worth implementing. On the other hand, an adverse effect will be evidenced by poor academic performance. Figure 1 shows the expected differences between variables.

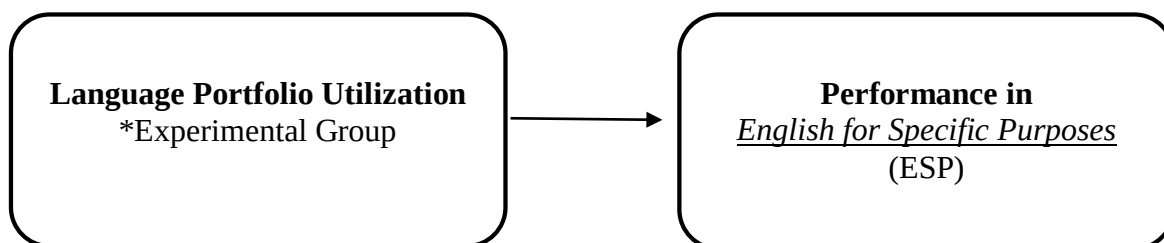

Figure 1. A conceptual model showing the assumed impact of Language Portfolio on the performance of the participants in *English for Specific Purposes (ESP)*

Review of Literature

Little (2012) explained the relevance of the Common European Framework of Reference for Languages (CEFR) and the European Language Portfolio (ELP) to language learning in higher education, in particular with regard to the setting of objectives and learning outcomes, as well as the development of the learning process and students ability to manage their own learning.

After providing some historical background, Little (2012) outlined the action-oriented approach of the CEFR, examined the concept of language learning progress and its implications for language teaching, and suggested how it can be used in the design, implementation, and evaluation of language learning programs in the higher level of education. It then introduces the ELP, explaining how it can be used in conjunction with the CEFR to support coherent course delivery while promoting reflective learning and student autonomy, and finally considers the role of self-assessment in a university assessment system.

Language Portfolio allows a student to keep any evidence he/she has and his/her ability to use English to communicate. It is a collection of his/her work. Examples of evidence may include certificates, or copies of these, tests, reports, corrected texts from class, reviews of books he/she has read, letters, emails, stories, journal entries, articles he/she has read, web pages he/she has browsed, audio/video recordings of him/her using English language (Ludlow, 2006).

			Page	Page 5 of 18

The Language Policy Division of the Council of Europe developed the European Language Portfolio. It was piloted from 1998 to 2000 and launched in 2001, the European Year of Languages. It is a document where learners can record their language learning and cultural experiences within and outside formal education.

Unlike the European common language guidelines, there is no single EFP; each (member state) develops an EAP for its situation based on European Commission guidelines and templates. As a result, a wide range of product portfolios is available for different languages, target groups, and ages.

(11) Methodology

This study employed the quantitative research method. Quantitative research, particularly the quasi-experimental design (match–pairing), was utilized to measure the impact of the effectiveness of the use of language portfolio on the academic performance of the respondents in English for Specific Purposes (ESP) for the 1st semester of SY 2022-2023. The experimental group was exposed to the use of a language portfolio, while the control group was taught without using a language portfolio as a tool in teaching ESP.

The study was conducted at CapSU Pontevedra Campus, particularly at the Teacher Education Department of the College of Education, Arts, and Sciences, from the 1st to 2nd semester of the school year 2022-2023. The whole-year round of conduct of the study started last August 2022 and ended in April 2023.

It utilized eleven (11) BSEd English major sophomores of the COEAS-Ted who are enrolled in English for Specific Purposes (ESP) offered in 1st semester of SY 2022-2023. The course was handled by the researcher personally.

Simple random sampling was done to identify the students who will fall under the control and experimental group. The profile of the respondents is shown in Table 1.

Table 1. Distribution of the participants of the study

CATEGORY	Population	Sample	Percentage
1. Control Group	7	6	54.54
2. Experimental Group	8	5	45.45
TOTAL	15	11	100.0%

An approved syllabus, language portfolio of the students, rubrics, pretest/ posttest materials, and validated survey checklist were utilized in the conduct of the study.

	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	
			Page	Page 6 of 18

Categorization and Scoring of Variables

Academic Performance. The participants' performance (score gained) in English for Specific Purposes (ESP) was categorized into:

<i>Scale</i>	<i>Verbal Interpretation</i>
28.01- 35.00	High
21.01- 28.00	Very Satisfactory
14.01 - 21.00	Satisfactory
7.01 - 14.00	Fairly Satisfactory
0.00 – 7.00	Did not Meet Expectations

The data gathered for this study were subjected to certain computer-processed statistics. The statistical tools used in this study were as follows:

Ranks. These were used to determine the priority/least language needs and the activities/tasks most/least needed by the participants to improve their academic performance in English for Specific Purposes (ESP) using a language portfolio.

Means. They were used to quantify the performance of the control and experimental groups before and after the intervention.

Standard Deviations. These were used to test the homogeneity or heterogeneity of the variances in terms of the academic performance in ESP of the control and the experimental groups.

T-test for independent samples. This test, set at a .05 alpha level, was used to determine the significance of the differences in performance of the control and experimental group using a language portfolio.

T-test for dependent samples. This test, set at a .05 alpha level, was used to determine the significance of the differences in the pretest and posttest of each group.

(12) Results and Discussions

1. Language needs of the participants

In this study, the language needs of the participants are categorized into academic and occupational purposes. Academic purposes refer to their use of language in order to improve their academic performance in English for Specific Purposes (ESP) and their academic standing in general. In contrast, occupational purposes refer to using the language to improve their occupational skills and their employment readiness in teaching, particularly English.

1.1. Academic Purposes. The participants' academic purposes needs are ranked in Table 2. Data revealed that reading comprehension ranked as their first academic needs, followed by listening comprehension as the second and writing essays as the third.

	Document Type:	Document Code	RES- CR-01
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 7 of 18

Participants' academic needs that belonged to the top ten choices also included outlining, alphabetizing, paraphrasing, summarizing, using synonyms and antonyms, audio presentation, and proofreading.

Data further revealed that the participants' button ten language needs include using word application software, open-ended tools, language rubrics preparation, instructional materials selection/ preparation, lesson planning, slide deck preparation, scanning, PC/ mobile application, portfolio/portfolio/ e-portfolio making and navigational tools.

This implies that the participants' language needs, categorized into academic purposes, are focused on the skills needed in studying their lessons and most unlikely used ICT and other technology-aided tools in studying their lessons. They are more advanced in technology utilization in studying, which is relevant in this generation (21st-century learners) where they belong. They are already adaptive to the use of ICT in the learning process, which can be a good sign of digitalization.

Table 2. The language needs of the participants classified into academic purposes

LANGUAGE NEEDS	RANK
A. Academic Purposes	
Reading Comprehension	1
Listening Comprehension	2
Writing Essays	3
Outlining	4
Alphabetizing	5
Paraphrasing	6
Summarizing	7
Synonyms and Antonyms	8
Audio Presentation	9
Proofreading	10
Use of graphic Organizer	11
Referencing/Bibliography	12
Skimming	13
Audio-visual presentation	14

Portfolio/e-Portfolio making	24
Navigation tools	25
Others (Speaking, oral recitation)	26

1.2. Occupational Purposes. The participants' language needs for occupational purposes are presented in Table 3. Data showed that writing application letters ranked first as their need for occupation purposes, followed by filling out DepEd forms. The third is using short messaging systems (SMS) or chatting applications on smartphones and PCs. To complete the top ten rank of their occupational needs, these include printed resume making, telephone communication/etiquette, job interview, instructional materials selection/preparation, conducting business meetings, collaboration skills, and memorandum preparation.

The participants considered these occupational needs as their bottom ten, which include writing and sending emails, taking minutes of the meeting, lesson planning, correspondence, negotiation skills, video conferencing, parliamentary procedure, writing notice of the meeting and agenda preparation, entertaining clients, and hosting school events.

This implies that the participants' occupational needs are the skills and aptitudes needed to land a job for their future employment. The bottom ten occupational needs are centered on the on-the-job performance of their job. The result implicated that the respondents prioritize job-hunting basics, particularly in entering an entry-level position in the Department of Education (DepEd).

Table 3. Language needs of the participants classified into occupational purposes

LANGUAGE NEEDS	RANK
B. Occupational Purposes	
Application Letter	1

Entertaining clients	19
Hosting school events	20

2. Activities needed by the participants to improve their performance in ESP

2.1. Academic Purposes. Table 4 presents the activities needed by the participants in their academics. Data revealed that they needed problem-solving the most as Rank 1, followed by citing/referencing used articles in their reports, and film showing as the third. They need synthesizing, brainstorming, researching, vlogging, blogging, project/output/product, and preparing an annotated bibliography to complete the top ten list.

On the other hand, they do not need activities such as tutorial sessions, preparing an outline, portfolio/ e-portfolio preparation, taking down notes, independent study, peer mentoring/critiquing, guided writing, technical writing, essay writing, and report writing through inquiry.

These results implicate that the participants prioritized activities that would develop their active listening and reading comprehension through conducting research-related activities. These would further enhance their active class participation since they enjoyed the activities designed by their course facilitators in consonance with their learning styles.

Table 4. Activities needed by the participants classified into academic purposes

NEEDED ACTIVITIES	RANK
A. Academic Purposes	
Problem-Solving	1
Citations/referencing	2
Film Showing	3

Technical writing	24
Essay writing	25
Report writing through inquiry	26

2.2. Occupational Purposes. Table 5 presents the activities needed by the participants classified into occupational purposes. Data revealed that they need simulation as the number one activity. This is followed by conducting symposia/fora; the third in rank is attending seminars/training. They need a demonstration, video tutorials, immersion, mock interviews, tour guiding, and professional learning community participation to complete the top ten activities they like for occupational purposes.

On the other hand, their least needed activities as of the moment include conducting interviews, inviting resource speakers, collaborating in industry, covering news (school publication), joining clubs, role-playing, joining debates, extemporaneous /public speaking, conducting fieldwork, coaching in literary contests, and hosting school events.

The results implied that the participant wanted performance-based tasks that would authentically measure their actual performance based on the content delivered by their course facilitators. They wanted to collaborate with their classmates to showcase their flexibility and leadership skills by handling complex assigned tasks.

Moreover, they do not need data-gathering skills, partnership, and collaboration with the school's stakeholders yet. They are not yet ready to leave their comfort zones and do job-related tasks outside the classroom.

Table 5. Activities needed by the participants classified into occupational purposes

3. Performance of the experimental and control groups before and after the use of language portfolio

Table 6 presents the performance of the control and experimental groups before and after using the language portfolio. Data revealed the experimental group's ($M=17.40$; $SD=2.30$) mean performance was higher than the control group's ($M=15.17$; $SD=2.48$) before utilizing language portfolio as a tool in ESP; however, both groups have performed satisfactorily before the intervention.

Moreover, data showed that the experimental group ($M= 27.20$; $SD= 1.48$) had higher performance compared to the control group ($M=17.00$; $SD= 2.28$) after the utilization of the language portfolio. Compared to the performance before the intervention, the control group also performed satisfactorily after the intervention. The experimental group performed satisfactorily before the intervention but improved its performance to very satisfactory.

This implies that the intervention in teaching English for Specific Purposes (ESP) is effective for both control and experimental groups before and after the intervention.

Table 6. Performance of control and experimental groups before and after the intervention

Category	N	Mean	Std. Deviation	VI
Before intervention				

	Document Type:	Document Code	RES- CR-01
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 12 of 18

Pretest				
(Control)	6	15.17	2.48	Satisfactory
Pretest				
(Experimental)	5	17.40	2.30	Satisfactory
After intervention				
Posttest				
(Control)	6	17.00	2.28	Satisfactory
Posttest				
(Experimental)	5	27.20	1.48	Very Satisfactory

Note: Interpretations are based on the scale (0.00 - 7.00) Did Not Meet Expectations, (7.01 - 14.00) Fairly Satisfactory, (14.01 - 21.00) Satisfactory, (21.01 - 28.00) Very Satisfactory, & (28.01 - 35.00) Outstanding.

4. Difference in the performance of the experimental and control groups before and after the use of a language portfolio

Table 7 shows the difference in the performance of the control and experimental groups before and after using language portfolios. Data showed that before the intervention, there was no significant difference in the performance of the control and experimental groups ($t\text{-value} = -1.534$, $p\text{-value} = 0.159 > 0.05$). They have comparable performance. However, after the language portfolio had been utilized, there was already a significant difference ($t\text{-value} = -8.566$, $p\text{-value} = 0.000 < 0.05$) in the performance of the control and experimental groups. The null hypothesis stating that there is no significant difference between the performance of the experimental and the control group with the use of language portfolio is hereby rejected.

This implies a difference in the performance of the two groups when the language portfolio was used in the experimental group; therefore, the two groups did not perform equally after the language portfolio was introduced.

Table 7. The difference in the performance of control and experimental groups before and after the use of a language portfolio

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- CR-01
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	
			Page	Page 13 of 18

5. Difference in the pretest and posttest of the experimental and control group

Table 8 further shows the difference in the pretest and posttest of the experimental and control groups. The table clearly supports that the use of the intervention has a significant difference in the scores of the experimental and control groups before and after the intervention.

Even without the use of language portfolio in the control group, there is also a significant difference in the pretest and posttest ($t\text{-value} = -11.00$, $p\text{-value} = 0.000 < 0.05$). With the use of language portfolio in the experimental group, there is also a significant difference in the pretest and posttest ($t\text{-value} = -9.179$, $p\text{-value} = 0.001 < 0.05$). The null hypothesis stating that there is no significant difference in the pretest and posttest of the experimental and control group is hereby rejected.

Category	M	Inferential Test	t - Value	p - Value	VI
Control Group					
Pretest	15.17	t-test for Dependent Samples	-11.000	0.000	Significant
Posttest	17.00				
Experimental Group					
Pretest	17.40	t-test for Dependent Samples	-9.179	0.001	Significant
Posttest	27.20				

This implies that the students performed differently in the pretest and posttest, regardless of their treatment.

Table 8. Differences in the pretest and posttest of the control and experimental group

Category	N	Inferential Test	t- Value	p-value	VI
Pretest					
Control Group	15.17	t-test for Independent Samples	-1.534	0.159	Not Significant
Experimental Group	17.40				
Posttest					
Control Group	17.00	t-test for Independent Samples	-8.566	0.000	Significant
Experimental Group	27.20

(13) Conclusions and Recommendations

1. Participants are ICT and technologically adept, which is an advantage on their part, specifically in studying their lessons; however, they still have various language needs which need to be addressed, particularly study and thinking skills.

These basic study skills which they need at present are expected to be mastered already before they could have reached tertiary level; hence, the BSEd English curriculum may be revised and include study and thinking skills as one of the preparatory courses to be offered under the general education courses in order to address the gap discovered.

1.2. Participants are street-smart and practical enough to know their occupational needs using the English language as their armor in entering the world of employment. Their occupational needs are the basics for every job-hunter to possess to be employed in teaching.

Those occupational needs which they have foreseen not as a need should be deliberately augmented by the college and institution where they will be a part in the future through on-the-job training (OJT)/student-teaching internships, in-service training, seminars, workshops in order to capacitate their occupation-related needs and for them to perform their tasks as teachers effectively and efficiently.

2.1. The participants are active visual learners and prioritize research-related activities to improve their performance in English for Specific Purposes (ESP). They learn best when their senses (visual and auditory) are being appropriately tapped, thus, improving their receptive skills such as reading, viewing, and listening.

The course facilitators may design course syllabi that utilize more activities to hone the participants' productive skills, like writing and speaking, to balance the macro skills they should possess as they complete the BSEd English program.

2.2. The participants' performance in English for Specific Purposes (ESP) can be improved through conducting student-centered activities embracing the philosophy of pragmatism. They learn best when they do things independently and utilize their critical thinking skills and potential to produce an output and perform tasks beyond the standards set by their course facilitators.

The course facilitators may explore other teaching styles suited to their student's learning styles and the need to align activities as demanded by the course outcomes. They may also require their students to design and implement extension activities by the college/ clubs where they belong for school and community partnership and collaboration to shape their social competence as one of the spheres of the BSED English curriculum.

3. Language portfolio is an effective tool in improving the participants' performance in English for Specific Purposes(ESP).

4. Control and experimental group of participants have different performances in ESP after the language portfolio has been introduced to them.

	Document Type:	Document Code	RES- CR-01
	DOCUMENTED INFORMATION ISO 9001:2015	Revision No.	00
	Document Title:	Effective Date	
	COMPLETED RESEARCH	Page	Page 15 of 18

5. There is an improvement in the participants' performance in ESP in the pretest and posttest, regardless of the treatment that they have received.

6. A framework crafted from the study's results may still be enhanced before its utilization as a guide in making or revising a syllabus in English for Specific Purposes (ESP).

7. The course facilitators may adopt guidelines for language portfolio preparation if they ever wish to replicate the study and consider using language portfolios to improve their student's performance in English for Specific Purposes. The utilization of the language portfolio may be modified/ contextualized based on the target language, age, level, and group.

(14) Output

1. Framework crafted from the results of the study

Figure 1 shows the framework crafted from the results of the study. The framework is a stacked Venn Diagram designed to show the overlapping relationship between and among variables like the language needs of the participants that could be addressed through the activities that will be designed by the course facilitator in developing the language portfolio, which could eventually lead to an improved performance in English for Specific Purposes (ESP). It is further described as follows:

Performance in ESP. This is the outcome variable being measured in the study.

Language Portfolio. This is the intervention being tested to improve performance in ESP.

Language Needs and Language Activities. These are the subsets of the language portfolio as an intervention. They are further categorized into academic and occupational purposes. These two basic components are needed in preparing the language portfolio of the participants.

Finally, the framework may be utilized as a guide by language teachers in crafting their syllabi for ESP courses in the future.

2. Language Portfolio Guidelines

For the course facilitators who intend to utilize language portfolios as a tool in teaching ESP, here are some guidelines the researcher can offer to guide them in language portfolio preparation. They may follow the formulated guidelines in designing a language portfolio required as a course requirement at the end of the semester to be reflected in the course syllabus.

Guideline no. 1. Establish the language needs of the students. Conduct a student need assessment (SNA) at the start of the semester and make a student's profile.

Guideline no. 2. Establish the course objective. Since a framed syllabus is a tentative plan, modify course objectives based on the results of the SNA without losing the real essence of the course description.

Guideline no. 3. Decide on the materials based on the student's language needs. Materials to be used should address and coincide with the objective of the course. Sources of these materials must be updated at least ten years back. They may be contextualized and should be suited to the student need assessment (SNA) results.

Guideline no.4. Design and schedule goal-oriented activities. The activities to be implemented must be aligned with the student's language needs by utilizing appropriate methods and teaching strategies. They should be contextualized, attainable, and time bound.

Guideline no.5. Assessment tools like language portfolios must be aligned with the objectives set. All performance tasks and content standards must be presented to the students before giving the tasks and should be coupled with grading rubrics and criteria. They should be related to the tasks and contain sub-criterion contextualized and tailored to the competencies being measured and objectives set.

Guideline no. 6. Compile students' outputs and performance tasks. All products/outputs produced in every learning task and activity must be compiled by the students (printed and soft copy) and passed to the course facilitator either in hard copy or soft copy for online submission through google classroom/drive. These outputs are to be checked and graded by the course facilitator and should be returned to the students. The students, in turn, should affix their signatures as proof that they have acknowledged and received the returned outputs from their course facilitators. The compiled checked outputs should be coupled with students' reflections.

Guideline no. 7. Standards in the written outputs. All outputs must be written in Times New Roman, Tahoma, or Arial, 12 font size, single space, with space between paragraphs, A4 size bond paper with the page number at the upper left side, with CapSU – ISO Header.

Guideline no. 8. Outline presentation. The presentation outline in reports and other written projects should be as follows: A title page with names of presenter/s, introduction, learning outcomes, body/content, summary or takeaways, evaluation/output/tasks, and references.

Guideline no. 9. Mode of Submission. A language portfolio containing all the outputs/performances and highlights of the students' achievements may be submitted online via Google Drive, Google Classroom, Google Site, and the email address of the course facilitator (electronic portfolio). Depending on the class' agreement, the students may personally submit hard copies of the language portfolio using clear books, folders, envelopes, and other materials, applying students' creativity and resourcefulness

(15) Technology Transfer Activity Conducted

(17) Acknowledgments

The researcher would like to extend their gratitude to the following for the realization of this study.

1. Dr. Editha C. Alfon and Dr. Honey Lee E. Casa, SUC President III and Campus Administrator, for allowing the researchers to conduct the study ;
2. Dr. Judel V. Prtacio, Dean of COEAS, for the encouragement and motivation;
3. Prof. Maritess D. Villanueva, Chair of Research, for the technical assistance;
4. Dr. Rasco C. Daliva, co-worker at COEAS, for the statistical analysis;
5. Prof. Alvin D. Tenorio and Dr. Louis Placido F. Lachica, co-worker and Director of SSITC, for their suggestions in the improvement of the outputs of the study.
