(1) Research Program/Project/Study Title:	
<i>Kanamiton sa Kadanlakon: An Ethnoecological and Cultural Mapping Sketch of Puyoy (Anguillidae) in Capiz, Philippines</i>	
Proponent Name:	Emmanuel D. Dayalo
Academic Rank:	Associate Professor V
Co-Authors (with academic rank):	Harold O. Buenvenida, Associate Professor V Eimee D. Potato, Associate Professor V
Campus/Satellite College/Address:	CapSU Roxas City Main Campus/CapSU Pontevedra
Telephone/Cell Phone/Fax Number:	
E-mail Address:	

Program or Project has component (if no proceed to 2)? ☐ Yes ☐ No

(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

Safeguarding the culture and heritage through a systematized educational schema and integrating the preserved traditions and heritage in the contemporary educational curriculum are the important tenets that the Philippine educational system must uplift and enhance. According to NCCA (2019), the UNESCO declares that there are two approaches to preserve cultural heritage: one is to record it in a tangible form and conserve it in archives; the other is to preserve it in a living form by ensuring its transmission to the next generations, thus this leads to the establishment of Schools of Living Traditions as an approach.

Puyoy (Anguillidae) or tropical eel is a local food heritage in Capiz. As Gonzales (2020) stated, *Puyoy* is mostly found in wetlands, making it a rare kind of water animal in the country. It is also different from any other food you find on the streets. It is usually described as tiny, long, bony, and slimy. *Puyoy* is sometimes mistaken for a snake.

Local heritage can be place or object may be considered to have local heritage value if it meets one or more of the following criteria: displays historical, economic or social themes that are of importance to the local area represents customs or ways of life that are characteristic of the local area; has played an important part in the lives of local residents; displays aesthetic merit, design characteristics or construction techniques of significance to the local area; is associated with a notable local personality or event; is a notable landmark in the area; is a tree of special historical or social significance or importance within the local area (Roberson, 2019).

Puyoy in Capiz as a street food barbecue has been so famous among locals, vloggers and tourism industry. It has been featured in so many tv shows in the country but in-depth interpretation of its stories, cultural heritage value, cultural mapping and protection can be considered as insufficient. This premise calls the need for a Cultural Mapping.

Fundamentally, cultural mapping is defined as “an approach used to identify, record, and use cultural resources and activities for building communities, where communities map what is important to them.” (Cook and Taylor as cited by NCCA, 2022). Through the conduct of cultural mapping, the Local Government Unit (LGU) and other stakeholders can identify the distinct cultural resources of their community and at the same time can properly record a heritage resource for future reference. Moreover, the process can generate interest on heritage resources among users and non-users of cultural properties. Eventually, they can develop or establish a heritage conservation council who shall lead in the conservation of the local cultural heritage as well as develop legislation, bills, and guidelines for safeguarding the cultural heritage of the community.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned. .)

This qualitative research explores the documentation of narratives, folk stories and tales of *Puyoy* (Anguillidae) as a cultural heritage in the province of Capiz. Through ethnoecological explorations and biological descriptions of *Puyoy*, it would be able to provide in depth knowledge, understanding and appreciation to the cultural facets of Filipinos in general. A standardized Cultural Mapping Tool Kit by the National Commission for the Culture and the Arts will be utilized to employ the veracity on data gathering, procedure, documentation, validation and utilization of whatever deliverable that this study can provide.

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

1. What stories, tales and narratives can be described among folks, fishermen or street vendors of *Puyoy* in the province of Capiz?
2. What ethnoecological explorations can be made on *Puyoy* (Anguillidae) as a cultural heritage of Capiz?
3. What cultural mapping sketch on *Puyoy* can be derived among target local areas in Capiz?

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of –the-art of current technology / information from which the project proposal will take-off).

Cultural mapping has been recognized by UNESCO as a crucial tool and technique in preserving the world's intangible and tangible cultural assets. It encompasses a wide range of techniques and activities from community-based participatory data collection and management to sophisticated mapping using GIS (Geographic Information Systems).

Culture and experience shape belief systems, the direction of education, the media, tourism, community development, planning, and creative industries, which in turn influence people's perceptions of places. It is essential to understand the factors that influence perceptions of places, paying particular attention to personal and community interpretations of culture. Cultural mapping, therefore, is used in both a literal and metaphorical sense, where it goes beyond strict cartography to include not only land, but also other cultural resources and information recorded by alternative techniques (UNESCO, 2022).

According to Bessiere and Tibere (2020) tourist interest in different food cultures is a factor for local development in the fields of agro-food and crafts, whilst also contributing to the enhancement of food culture and heritage. As part of the tourist experience, eating local cuisine is a way of breaking with standardised, everyday routine by taking the tourist off into unknown culinary realms. This distancing from daily life is already possible in the home country through eating exotic food at home, or in so-called 'ethnic' restaurants. It takes on another dimension when travelling. This paper therefore aims to examine the role of food and eating in the tourist experience. To be more precise, we shall first attempt to assess its importance in visitors' representations, notably as a motive for travel, or in the images deployed regarding eating and drinking during their stay, as they relate to perceptions of the place visited. As well as studying tourist food perceptions, we shall also examine tourist behaviour as regards food purchase and consumption, together with behaviour relating to food souvenirs.

De Villa et al (2028) mentioned in their study about the discourse of balancing safeguarding of culinary heritage and development through modernization, two significant frameworks can be highlighted: the culinary heritage significance (Cadiogan et al., 2021; Mercado, 2021; Mercado and Andalecio, 2020; Mercado and Zerrudo, 2018; Australia ICOMOS, 2013) and the culinary safeguarding (Mercado and Zerrudo, 2018; UNESCO, 2003). The context of understanding the significance, the community must determine the importance of their culinary heritage through its historical, cultural, architectural (association of built heritage to the food), aesthetics, technological, archaeological (association of food and pre-dated and dated history), social, and symbolical (Australia ICOMOS, 2013). Information related on the significance of culinary heritage can be accessed through the collection of physical (observation), oral (interview), or documentary/archival (books and other published materials) (Mercado and Zerrudo, 2018). On the other hand, although development is needed in different aspects, it must be balanced out with sustainability through safeguarding its significance. Culinary safeguarding dimensions or cultures are scientific measurement on how to determine the related actions set by the community on the protection and sustainable development of local cuisines (Mercado and Zerrudo, 2018). The dimensions are management, legislation, raw ingredients and the environment, cooking tradition, food appearance, plating and design, restaurant facility and design, viability, promotions, visibility, stakeholders' participation, and research (Mercado and Andalecio, 2020; Mercado and Zerrudo, 2018; UNESCO, 2003). It is aligned with the United Nations Educational, Scientific and Cultural Organizations (UNESCO) 2003 Convention for the Safeguarding of the Intangible Cultural Heritage.

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested).

Ethnoecology is the study of human knowledge, perception, classification, and management of natural environments. Work in ethnoecology synthesizes the ecologist's understanding of the relationships between biological and physical components in ecosystems with the cognitive anthropologist's focus on the acquisition and expression of cultural information. For ethnoecologists, culture is seen as the knowledge necessary for ecologically adaptive behavior. Accordingly, culture is understood as an evolutionary process transmitted and replicated through language. Ethnoecologists emphasize the symbolic and functional roles of language, the analysis of which allows access to ecological knowledge. Research in ethnoecology integrates the empiricism of ethno-science with the functionalist perspective of ecological anthropology to understand fully the adaptive significance of cultural knowledge and the ecological relevance of human behaviors (Gragson & Blount, 1999).

Lev Vygotsky's Sociocultural Theory of human learning (1987) describes learning as a social process and the origination of human intelligence in society or culture. The major theme of Vygotsky's theoretical framework is that social interaction plays a fundamental role in the development of cognition. Vygotsky believed everything is learned on two levels. First, through interaction with others, and then integrated into the individual's mental structure. Every function in the child's cultural development appears twice: first, on the social level, and later, on the individual level; first, between people (interpsychological) and then inside the child (intrapsychological). This applies equally to voluntary attention, to logical memory, and to the formation of concepts. All the higher functions originate as actual relationships between individuals (Vygotsky, 1978).

A second aspect of Vygotsky's theory is the idea that the potential for cognitive development is limited to a "zone of proximal development" (ZPD). This "zone" is the area of exploration for which the student is cognitively prepared, but requires help and social interaction to fully develop (Briner, 1999). A teacher or more experienced peer is able to provide the learner with "scaffolding" to support the student's evolving understanding of knowledge domains or development of complex skills. Collaborative learning, discourse, modelling, and scaffolding are strategies for supporting the intellectual knowledge and skills of learners and facilitating intentional learning.

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

The study used the qualitative research design employing participation action ethnography. Participatiion action ethnography is the recording and analysis of a culture or society, usually based on participant-observation and resulting in a written account of a people, place or institution (Coleman & Simpson, 2017). This study adopted descriptive-qualitative research method which according to Myers (1997) is designed for research to understand the people and the social and cultural ethnographic in- depth contexts within they live. Cultural Mapping Tool Kit as prescribed by the National Commission for the Cuture and the Arts will be utilized.

Figure 1. *The Cultural Mapping Phases*

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart.

Research Objectives	Year 1						Year 2					
	July	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun
1. Field work/observation												
2. Analysis of data gathered from observation												
3. Lay-outing, Editing and Printing of 100 copies of coffee table book												

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- RP-01
	Document Title:	RESEARCH PROPOSAL	Revision No.	00
			Effective Date	November 30, 2019
			Page	Page 5 of 5

1. Well documented Cultural Mapping Sketch of *Puyoy*.
2. Copyrighted materials that can be used for instruction.
3. Coffee table story book.

(15) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities)

(16) Target Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output)

(17) Personnel Requirement

Name	Role (Program,Project, Study Leader)	Field of Specialization

Percent time devoted to the Program/ Project/ Study

Program/Project Leader (in hours):

Program/Project Members (in hours):

(18) Budgetary Requirement

SOURCES OF EXPENSES	Quantity	Amount (PhP)
A. Personnel Services (For studies needed the Research Assistant, informant/s, guide)		
B. Maintenance and Other Operating Expenses (MOOE) (modify and include only whichever is applicable)		
- Transportation allowance		
- Meal allowance during data gathering		
- Professional fees (laboratory analysis and other related fees)		
- Miscellaneous (for incidental expenses)		
- Printing		
C. CAPITAL OUTLAY		
Total
