(9A) Abstract

This study investigated the extent of the four-fold function implementation and the degree of organizational climate at Capiz State University, aiming to provide insights into operational effectiveness and workplace dynamics. Adopting John Stacey Adams' Equity Theory and Program Theory as theoretical frameworks, the research employed a descriptive research design involving survey questionnaires with 222 faculty, staff, and administrators. Statistical analysis, including descriptive and inferential statistics, as well as correlation analysis, was utilized to examine significant differences and relationships between variables. The findings revealed a high level of implementation across all four functions, with favorable ratings for instruction, research, extension, and production. Moreover, respondents perceived a positive organizational climate, particularly in terms of stakeholder involvement, interpersonal relations, and leadership and management practices. Employment-related variables significantly influenced organizational climate but have limited impact on function implementation. Based on these conclusions, recommendations were proposed to sustain and enhance effectiveness in function implementation and organizational climate. These included prioritizing resources and feedback mechanisms for ongoing alignment with stakeholders' needs, nurturing positive interpersonal relations, and addressing specific employment-related challenges to optimize organizational climate. Furthermore, comprehensive function implementation strategies were recommended to strengthen the positive correlation between function implementation and organizational climate, fostering a more productive work environment at Capiz State University.

(9B) Keywords: *Instruction, Research, Extension, Production, Operational Efficiency, Workplace Dynamics*

(10) Introduction

Transitioning from the foundational understanding of Higher Education Institutions (HEIs) and their multifaceted roles, it's evident that organizational climate plays a pivotal role in shaping their effectiveness. Highlighted by the Commission on Higher Education (CHED) and Texas State University's (TSU) strategic plans, HEIs are tasked with fulfilling essential functions such as instruction, research, and community engagement. However, despite the recognized importance of these functions, there exists a gap in understanding how organizational climate, particularly leadership behaviors, influences their execution (CHED, n.d.; OMB, 2004;; CHED, 2011).

Transitioning further to the broader significance of HEIs and State Universities and Colleges (SUCs) in societal progress, it's apparent that these institutions perform various functions crucial for national development. Within the instructional function, research highlights the importance of effective teaching practices, as evidenced by Mandernach et al. (2015), emphasizing their impact on faculty satisfaction and educational dynamics, irrespective of instructional mode or employment status.

Moving to the research function, universities' commitment to learning and discovery, as articulated by Das (2017), underscores their role in shaping future professionals and informing policy decisions through research initiatives. Extension programs, as discussed by Alvarez & Dean (2017), underscore universities' societal commitments beyond profit, serving as vital channels for disseminating knowledge to industry stakeholders. Lastly, the production function, highlighted in International Education Studies, elucidates the financial dynamics of universities, emphasizing the central role of academic staff in driving growth and sustainability through research and consulting activities (Irvine & Ryan, 2019). This underscores the critical balance between academic pursuits and financial sustainability within HEIs.

The objectives of this study, which are not divided by subheadings, are as follows:

1. Determine the extent of the four-fold function implementation at Capiz State University, focusing on instruction, research, extension, and production.
2. Assess the degree of organizational climate at Capiz State University, particularly examining stakeholder involvement, interpersonal relations, and organizational leadership and management.
3. Investigate if there is a significant difference in the extent of the four-fold function implementation at Capiz State University based on highest educational attainment, type of employment, number of years in service, and monthly income.
4. Examine if there is a significant difference in the degree of organizational climate at Capiz State University when considering highest educational attainment, type of employment, number of years in service, and monthly income.
5. Determine if there is a significant relationship between the extent of implementation of the four-fold function and the degree of organizational climate at Capiz State University.

Therefore, to address this gap, the research study aimed to investigate the interplay between organizational climate and the implementation of four-fold functions at Capiz State University. Through a quantitative approach encompassing surveys, and data analysis, the study endeavored to bridge the existing gap in understanding and contribute to the optimization of organizational climate within the Philippine higher education landscape.

(11) Methodology

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

The study adopted John Stacey Adams' Equity Theory (1963) as its theoretical framework to explore the relationship between employee motivation and organizational outcomes. Adams' theory posits that equitable treatment is vital for maintaining employee motivation and commitment, emphasizing the importance of balance between inputs and outcomes in the workplace. Program Theory (Weis, 1972) was employed to describe and predict the outcomes of the program aimed at enhancing employee motivation and organizational effectiveness. Program Theory provides a structured approach to understanding how programs lead to specific impacts and considers contextual factors that influence these outcomes.

The research design was descriptive, involving the collection of data to describe the variables under study. Data was gathered through survey questionnaires distributed among the 222 faculty, staff, and administrators of Capiz State University. The survey questionnaire measured the extent of the four-fold function implementation and the degree of organizational climate.

Statistical analysis included descriptive statistics such as mean, standard deviation, and frequency distribution to describe the collected data. Inferential statistics such as t-test and ANOVA were used to determine significant differences in variables based on highest educational attainment, type of employment, number of years in service, and monthly income. Pearson's correlation coefficient assessed the relationship between the extent of four-fold function implementation and organizational climate.

The evaluation method was consist of self-report survey questionnaires. Pre-testing of the survey questionnaire ensured its validity and reliability. Strategies for implementation prioritized informed consent, anonymity, and confidentiality of participants, allowing them the freedom to withdraw participation at any time. The study adheres to ethical standards for research involving human subjects, ensuring the integrity of the data and the well-being of the participants throughout the research process.

(12) Results and Discussions

Extent of the Four-Fold Function Implementation at Capiz State University Four-Fold Functions

Table 1. Extent of the Four-Fold Function Implementation at Capiz State University Four-Fold Functions

Four-Fold Functions/ Variables	Mean Score
Instruction	4.34
Research	4.45
Extension	4.43
Production	4.36
Extent of Four-Fold Function Implementation	4.40

The data presented in Table 1 illustrated the mean scores for the extent of the four-fold function implementation at Capiz State University across various functions, namely Instruction, Research, Extension, and Production. Each function's mean score reflects the average rating assigned to it by respondents, with higher scores indicating a greater perceived extent of implementation. The mean scores for Instruction, Research, Extension, and Production are 4.34, 4.45, 4.43, and 4.36, respectively. The overall mean score for the extent of the four-fold function implementation, combining all functions, is 4.40. This suggests that, on average, respondents perceive a high level of implementation across all four functions at Capiz State University. The empirical data underscores the institution's commitment to executing its core functions effectively, as reflected in the favorable ratings provided by respondents. Such comprehensive implementation is vital for fulfilling the university's educational mission and meeting the diverse needs of its stakeholders.

These findings are consistent with prior research emphasizing the pivotal role of faculty and student engagement in extension programs, which contribute significantly to students' knowledge, skills, attitudes, and values (Daquis et al., 2016). Moreover, studies from South Africa underscore the imperative for educational institutions to adapt continually, particularly in supporting students from historically underperforming backgrounds (T. Bush and D. Glover, 2016; L. Slatter, 2020).

The implementation of quality education programs aligns with the longstanding emphasis on instructional standards and faculty professional development, which are essential for nurturing students' present and future career paths (Gamson, 2015; Macalalad et al., 2016; Buenviaje et al., 2015; Felicen et al., 2013; Chavez et al., 2017; Daquis et al., 2016). While policy efforts often prioritize instructional alignment with standards, the correlation between such alignment and instructional quality remains modest (Polikoff and Porter, 2014; Desimone, Hochberg, & McMaken, 2016; Stecher et al., 2018). Nonetheless, a strong research culture within higher education institutions (HEIs) is crucial, contributing to knowledge creation, innovation, and institutional performance (Ali, Saeed & Munir, 2018; Khan, Bibi & Khan, 2018).

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

Research productivity within universities is influenced by various factors, including institutional support, collaboration, and individual capabilities (Meigounpoory & Ahmadi, 2012; Batool, 2018; Nguyen et al., 2016). Collaboration among faculty members fosters a culture of research excellence and enhances institutional performance, highlighting the significance of ongoing interaction and shared research goals (White, James, Burke, & Allen, 2012; Nguyen et al., 2016). Furthermore, income-generating programs within academic institutions play a critical role in supporting financial sustainability and academic growth, with staff involvement and institutional resources being key determinants of program success (S. M. Adan and P. Keiyoro, 2017; S. Nair, 2018). Overall, these findings underscore the importance of holistic approaches to education and institutional support in fostering academic excellence and sustainability.

Degree of Organizational Climate at Capiz State University, Particularly Examining Stakeholder Involvement, Interpersonal Relations, and Organizational Leadership and Management

Table 2. Degree of Organizational Climate at Capiz State University, Particularly Examining Stakeholder Involvement, Interpersonal Relations, and Organizational Leadership and Management

Variables	Mean
Stakeholder Involvement	4.35
Interpersonal Relations	4.47
Organizational Leadership and Management	4.33
Degree of Organizational Climate	4.38

The data presented in Table 2 provides insights into the degree of organizational climate at Capiz State University, focusing on stakeholder involvement, interpersonal relations, and organizational leadership and management. The mean scores for stakeholder involvement, interpersonal relations, and organizational leadership and management are 4.35, 4.47, and 4.33, respectively. The overall mean score for the degree of organizational climate, combining these factors, is 4.38. These mean scores indicate a generally positive perception of the organizational climate at the university, with respondents rating stakeholder involvement, interpersonal relations, and leadership and management favorably. Such positive perceptions are crucial for fostering a supportive and conducive work environment, promoting effective collaboration, and enhancing organizational effectiveness. The empirical data underscores the importance of addressing these aspects of organizational climate to maintain high levels of employee satisfaction, productivity, and overall organizational success.

This interpretation is supported by various studies in the field. Novac and Bratanov (2014) highlight the ongoing challenge for organizations to enhance leadership and organizational climate for success, while Lakomski, Evers, and Eacott (2017) stress the necessity of critical dialogue in educational settings to overcome systemic flaws. Swart et al. (2021) demonstrate that underperforming schools can address issues effectively through supportive leadership, echoing Mentz's (2014) assertion that organizational culture significantly impacts instructors' motivation and consequently, student learning. Additionally, Rachmawati and Lantu (2014) emphasize the influence of leadership on organizational culture and stability. Furthermore, Kalkan et al. (2020) and Karadag and Ozdemir (2015) underscore the role of school leadership in fostering a motivated environment for both students and instructors, while Fainshmidt and Frazier (2017) assert that organizational climate significantly influences member behaviors and attitudes, impacting organizational outcomes. Van Deventer (2016) stresses the pivotal role of school leadership in supporting academic success, particularly in underperforming schools, a sentiment echoed by Makgato and Mudzanani (2019). Additionally, Swart et al. (2021) emphasize the importance of recognizing and addressing leadership in improving underperforming institutions. These studies collectively reinforce the significance of positive organizational climate and effective leadership in driving organizational success and academic achievement.

Difference in the extent of the four-fold function implementation at Capiz State University when grouped to the Demographic Profile of the Respondents

Tables 3 – 3.3. Difference in the extent of the four-fold function implementation and Degree of Organizational Climate at Capiz State University when grouped to the Demographic Profile of the Respondents

Table 3. Employment		
Variables	F-Value	P-Value
Extent of Four-Fold Function Implementation	.007	.935
Degree of Organizational Climate	14.619	<.001

The analysis of employment-related variables reveals significant differences in the degree of organizational climate among different groups, as indicated by the F-value of 14.619 with a p-value of less than .001, signifying high statistical significance.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

This suggests that variations in employment factors such as job roles, tenure, or employment status have a notable impact on the perceived organizational climate. Conversely, the Extent of Four-Fold Function Implementation shows no significant differences across employment-related categories, with an F-value of .007 and a p-value of .935, indicating that employment factors do not significantly influence the extent to which the four-fold functions (instruction, research, extension, and production) are implemented within the organization. Therefore, while employment-related variables have a pronounced effect on the organizational climate, they do not seem to play a significant role in determining the extent of function implementation within the organizational framework.

Table 3.1 Service

Variables	F-Value	P-Value
Extent of Four-Fold Function Implementation	.027	.871
Degree of Organizational Climate	.137	.712

The analysis of service-related variables reveals that there are no significant differences in either the extent of four-fold function implementation or the degree of organizational climate across different service categories. For the extent of four-fold function implementation, the F-value of .027 with a p-value of .871 indicates that variations in service-related factors, such as length of service or type of service, do not significantly influence the implementation of the four-fold functions (instruction, research, extension, and production) within the organization. Similarly, for the degree of organizational climate, the F-value of .137 and the p-value of .712 suggest that service-related variables have no significant impact on the perceived organizational climate. Therefore, while service-related factors may vary among individuals within the organization, they do not appear to play a substantial role in determining either the extent of function implementation or the organizational climate within the context of this study. Similar to your findings, Newman & Denney (2012) found no significant association between service-related variables and service delivery climate. This suggests that other factors beyond service history might play a more prominent role in shaping employees' perceptions and experiences within the organization. The result has been supported by Guest, D. E. (2014), emphasizes the need to integrate insights from human resource management literature with research on organizational climate and function implementation for a more holistic understanding.

Table 3.2 Education

Variables	F-Value	P-Value
Extent of Four-Fold Function Implementation	.167	.955
Degree of Organizational Climate	.381	.822

The analysis of educational variables indicates that there are no significant differences in either the extent of four-fold function implementation or the degree of organizational climate across different educational levels. For the extent of four-fold function implementation, the F-value of .167 with a p-value of .955 suggests that variations in educational levels, such as different degrees or qualifications, do not significantly influence the implementation of the four-fold functions (instruction, research, extension, and production) within the organization. Similarly, for the degree of organizational climate, the F-value of .381 and the p-value of .822 indicate that educational variables have no significant impact on the perceived organizational climate. Therefore, while educational backgrounds may vary among individuals within the organization, they do not appear to play a substantial role in determining either the extent of function implementation or the organizational climate within the context of this study.

Table 3.3 Income

Variables	F-Value	P-Value
Extent of Four-Fold Function Implementation	.839	.502
Degree of Organizational Climate	1.598	.176

The analysis of income variables reveals that there are no significant differences in either the extent of four-fold function implementation or the degree of organizational climate based on income levels. For the extent of four-fold function implementation, the F-value of .839 with a p-value of .502 suggests that variations in income levels do not significantly influence the implementation of the four-fold functions (instruction, research, extension, and production) within the organization. Similarly, for the degree of organizational climate, the F-value of 1.598 and the p-value of .176 indicate that income variables do not have a significant impact on the perceived organizational climate. Therefore, while income levels may vary among individuals within the organization, they do not appear to play a substantial role in determining either the extent of function implementation or the organizational climate within the context of this study. The findings have received validation from Guest, D. E. (2014), who stresses the importance of amalgamating perspectives from the human resource management domain with investigations into organizational climate and function implementation to achieve a more comprehensive comprehension.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08

Relationship Between the Extent of Implementation of the Four-Fold Function and the Degree of Organizational Climate At Capiz State University

Table 4. Relationship Between the Extent of Implementation of the Four-Fold Function and the Degree of Organizational Climate At Capiz State University

		Correlations	
		Extent of Four-Fold Function Implementation	Degree of Organizational Climate
Extent of Four-Fold Function Implementation	Pearson Correlation	1	.175**
	Sig. (2-tailed)		.009
	N	222	222
Degree of Organizational Climate	Pearson Correlation	.175**	1
	Sig. (2-tailed)	.009	
	N	222	222

** . Correlation is significant at the 0.01 level (2-tailed).

The correlation analysis between the extent of four-fold function implementation and the degree of organizational climate at Capiz State University reveals a statistically significant positive correlation. The Pearson correlation coefficient between these two variables is found to be .175, with a p-value of .009, indicating a significant relationship at the 0.01 level (2-tailed). This suggests that as the extent of implementation of the four-fold functions (instruction, research, extension, and production) increases, there is a corresponding increase in the perceived degree of organizational climate within the university. In other words, a more comprehensive execution of the institution's core functions is associated with a more favorable organizational climate. This empirical finding underscores the importance of effective function implementation in fostering a positive organizational climate within academic institutions like Capiz State University, highlighting the interdependence between operational effectiveness and organizational dynamics. This empirical finding underscores the crucial role of effective function implementation in nurturing a positive organizational climate within academic institutions like Capiz State University, highlighting the intrinsic link between operational efficacy and organizational dynamics (Harris & Ogbonna, 2020). While your research primarily focuses on the comprehensive implementation of various core functions, it aligns with broader concepts of strategic effectiveness contributing to a positive work environment, as explored in the study by Harris and Ogbonna (2020), which delves deeper into specific performance management practices.

(13) Conclusions and Recommendations

Based on the findings of the study, the following conclusions has been drawn:

1. The data of a high level of implementation across all four functions at Capiz State University with mean scores for Instruction, Research, Extension, and Production indicating favorable ratings by respondents.
2. The valuable insights into the positive perception of the organizational climate at Capiz State University, as evidenced by favorable mean scores for stakeholder involvement, interpersonal relations, and leadership and management.
3. The analysis reveals significant differences in the degree of organizational climate among different employee groups, indicating the impact of employment-related variables on perceived organizational climate. However, these variables do not significantly influence the extent of function implementation within the organization.
4. The correlation analysis highlights a statistically significant positive correlation between the extent of four-fold function implementation and the degree of organizational climate at Capiz State University.

Based on the conclusions of the study, the following recommendation has ben drawn:

1. Based on the high level of implementation across all four functions at Capiz State University, it is recommended to continue prioritizing and investing resources in these areas to maintain and further enhance effectiveness. Regular assessments and feedback mechanisms should be established to ensure ongoing alignment with stakeholders' needs and expectations.
2. Given the positive perception of the organizational climate at Capiz State University, it is recommended to sustain efforts in fostering stakeholder involvement, nurturing positive interpersonal relations, and strengthening leadership and management practices. Continuous training and development programs for leaders and staff can further cultivate a supportive and conducive work environment.
3. While employment-related variables significantly impact the perceived organizational climate, their influence on the extent of function implementation is limited. It is recommended to address specific employment-related challenges or disparities identified through the analysis to optimize organizational climate. Tailored initiatives such as mentorship programs or diversity training can help mitigate any negative impacts on employee satisfaction and productivity.
4. Considering the statistically significant positive correlation between the extent of four-fold function implementation and the degree of organizational climate, it is recommended to prioritize comprehensive function implementation

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08

			Page	Page 1 of 2

strategies as a means to enhance the overall organizational climate. Collaborative initiatives involving different departments and stakeholders can further strengthen this relationship and contribute to a more positive and productive work environment.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

(15) Technology Transfer Activity

(16) Economic Analysis

(17) Acknowledgments

The researchers are profoundly grateful to God for His guidance and to my family for their steadfast support. We extend my heartfelt thanks to my friends and the university community for enriching this journey. Additionally, I express my appreciation to the faculty, and staff for their their invaluable contributions.
