(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

The Committee on Tourism and Competitiveness (CTC) of UNWTO defines Gastronomy Tourism as a type of tourism activity which is characterized by the visitor's experience linked with food and related products and activities while travelling. Along with authentic, traditional, and/or innovative culinary experiences, Gastronomy Tourism may also involve other related activities such as visiting the local producers, participating in food festivals and attending cooking classes.

Gastronomy tourism is also emerging as an important protector of cultural heritage, and the sector helps create opportunities, including jobs, most notably in rural destinations. As global tourism is on the rise and competition between destinations increases, unique local and regional intangible cultural heritage become increasingly the discerning factor for the attraction of tourists. (United Nation World Tourism Organization, n.d.)

The Western Visayas consists of six provinces on the islands of Panay, Guimaras, the western half of Negros Island, plus several outlying islands that are bordered by the Sibuyan sea, as well as Iloilo Strait, Visayan Sea, Guimaras Strait, Panay Gulf, and the Sulu Sea, with wide stretches of coastal lowlands with rugged hills and mountains in the interior, combined with rich volcanic soils. Capiz a place known as the "Seafood Capital of the Philippines". In a land with those characteristics, it is no wonder that the region is endowed with rich food, biodiversity, and culture from the highlands to the coastal waters. These products have been used for a long time, evolving into the creation of distinctive preparations that are associated with various provinces, just to name a few, there is a shrimp paste used regularly by people of Capiz. (Slow Food, 2015)

According to UNWTO, Gastronomy tourism offers enormous potential in stimulating local, regional and national economies and enhancing sustainability and inclusion. It contributes positively to many levels of the tourism value chain, such as agriculture and local food manufacturing. Linking gastronomy and tourism also provides a platform for the promotion of cultures through their cuisine. This not only assists in destination branding, but also helps to promote sustainable tourism through preserving valuable cultural heritage, empowering and nurturing pride amongst communities, and enhancing intercultural understanding. Through a visit to a food festival, cooking class or farm-to-table dining experience, tourists garner a better sense of local values and traditions.

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- PROP-01
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	November 25, 2019
			Page	Page 4 of 17

Gastronomy tourism can be a driver for modern tourists looking for authentic yet memorable experiences, as well as a pillar of sustainable tourism. Hence, It is critical that the benefits of gastronomy tourism are distributed fairly among the sectors involved. It is critical not only that farmers, cooks, and chefs are recognized as integral parts of the tourism value chain, but that the proposals give them a central role in order to preserve biodiversity and gastronomic culture. The real challenge is to break down stereotypes created by restaurant-based culinary tourism and take visitors to the source, where they can taste local dishes and interact with the local artisans.

According to UNWTO Secretary-General, Taleb Rifai, it is now more important than ever for destinations to maximize the potential of gastronomy tourism to contribute to economic growth, social inclusion, cultural and environmental preservation, and mutual understanding. Yet, to fulfil this potential, destinations must adapt by understanding and forecasting demand, creating networks with all local stakeholders and develop adequate products and marketing strategies. Support is also required to foster skilled human capital.

Gastronomy is an emerging tourism industry sector in the province of Capiz. Exploring this area of study will enlighten local communities about the various concepts and elements of gastronomic tourism. The study's findings will be used by the researcher to develop a more important structure that best explains gastronomic tourism in Capiz, which can be used by local governments, social researchers, anthropologists, and sociologists to better understand how food is related to culture, tourism, and rural growth.

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned.)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

This study aims to assess the potentiality of gastronomic tourism in Capiz.

Specifically, it will 1) determine the psychographic profile of the respondents in terms of types of tourist and reason for travelling; 2) determine the factors affecting gastronomic attractiveness in terms of preserving cultural heritage, adding authenticity value, and marketing, 3) determine the factors affecting destination attractiveness in terms of hospitality and services, entertainment, accessibility, and attractions; 4) evaluate tourist experience and satisfaction; 5) test the significant relationship among three major variables.

(11) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested.)

Gastronomic Tourism

Gastronomic tourism is an emerging phenomenon that is being developed as a new tourism product due, inter alia, to the fact that according to the specialized literature (among others, Quan and Wang, 2004) over a third of tourist spending is devoted to food. Therefore, the cuisine of the destination is an aspect of utmost importance in the quality of the holiday experience used in the literature is that proposed by Hall and Sharples (2003), according to which food tourism is an experiential trip to a gastronomic region, for recreational or entertainment purposes, which includes visits to primary and secondary producers of food, gastronomic festivals, food fairs, events, farmers' markets, cooking shows and demonstrations, tastings of quality food products or any tourism activity related to food. In addition, this experiential journey is related to a particular lifestyle that includes experimentation, learning from different cultures, the acquisition of knowledge and understanding of the qualities or attributes related to tourism products, as well as culinary specialities produced in that region through its consumption. Thus, the experience of gastronomic tourism is considered as such, provided that everything mentioned above constitutes the main reason or motivation to travel for visitors to a particular destination or at least one significant reason.

Gastronomy as Cultural Heritage Preservation

People connect to their cultural or ethnic group through food patterns. Food is often used as a means of retaining their cultural identity. People from different cultural backgrounds eat different foods. The areas in which families live and where their ancestors originated influence food like and dislikes. These food preferences result in patterns of food choices within a cultural or regional group.

On a larger scale, food is an important part of culture. Traditional cuisine is passed down from one generation to the next. It also operates as an expression of cultural identity. Immigrants bring the food of their countries with them wherever they go and cooking traditional food is a way of preserving their culture when they move to new places. Continuing to make food from their culture for family meals is a symbol of pride for their ethnicity and a means of coping with homesickness. Many open their own restaurants and serve traditional dishes. However, the food does not remain exactly the same. For example, some ingredients needed to make traditional dishes may not be readily available, so the taste and flavor can be different from the taste and flavor of the dishes that they would prepare in their home countries. Additionally, when immigrants sell food in another country, they do not only sell it to people from the same countries as them, but to people from different countries. Therefore, they have to alter the original dishes to cater to a wider range of customers with distinct tastes and flavor preferences. Alterations to original dishes can create new flavors that still retain the cultural significance of the dish.

Authenticity of Local Food

The typical meaning of authenticity is the genuineness, honesty, or sincerity of an object. McConnell firstly introduced authenticity and proposed the theory of “staged authenticity,” in which authenticity is an inherent property of the tourism object and obtaining authenticity experience is regarded as the fundamental goal of tourists, into tourism research. Furthermore, Wang divided the concept of “authenticity” into four main schools: Objectivism, constructivism, postmodernism, and existentialism. Objective authenticity emphasizes the authenticity of the objects visited by tourists. Constructive authenticity is the result of a social construction rather than objective things. This is the authenticity that a tourist or a travel producer projects on a target in accordance with its imagination, expectations, preferences, beliefs, and abilities. Therefore, the same object will form a different authentic experience, and the authenticity of an object is its symbolic authenticity. The authenticity of postmodernism raises the concept of “super-reality.” Culture itself is constantly changing and constantly creating new content. Existentialists emphasize the subjective experience of tourists rather than the authenticity of tourist

	Document Type:	DOCUMENTED INFORMATION ISO 9001:2015	Document Code	RES- PROP-01
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	November 25, 2019
			Page	Page 7 of 17

objects. Therefore, existential authenticity can be called an “authentically good time”. This means existence authenticity refers to a potential state of life that requires tourism activities to activate.

Tourism destination image and the gastronomic tourism experience

Several studies have found that tourists travel to those destinations that have established a reputation as a place to experiment with quality local products.

In the tourism world there are influential destinations whose brand image is connected, with varying levels of intensity, to gastronomic values. By way of example, it is possible to give a non-exhaustive list that includes, among others, Spain, France, Italy, Greece, Belgium, Portugal, USA (especially in areas such as California’s Napa and Sonoma Valleys), Brazil, Peru, Mexico, New Zealand, South Africa, Australia, Chile, Malaysia, Japan, Indonesia, Bali, China, Singapore. It is significant for example , that the Mediterranean diet of Spain, Greece, Italy and Morocco was included in UNESCO’s list of Intangible Cultural Heritage of Humanity in November 2010.

As for the gastronomic tourism experience, it can be defined as the evaluation carried out by the tourists on a number of attributes (attractiveness of the food and environment, quality of service), after a stay in a tourist destination where the tourist engaged in an activity related to gastronomy. The tourist’s perceived value of a particular destination or establishment is therefore multidimensional.

Post-experience satisfaction is a critical indicator for assessing the effectiveness or performance of the products and services of the destination. The tourist’s satisfaction with the purchase depends on the product’s performance in relation to the tourist’s expectations. It should be kept in mind that different cultures have different perceptions of satisfaction and evaluation of gastronomy and that high quality of service can result in dissatisfaction among consumers if their expectations had been too high, for example, due to exaggerated advertising. Satisfaction with the destination leads to customer loyalty and this in turn gives a higher level of intention to repeat the visit. Quality gastronomy is a decisive factor in satisfaction, as it produces a lasting memory about the experience lived by the tourist. Thus, depending on the expectations held by the consumer as to the gastronomy of the destination, such expectations predict their levels of loyalty or fidelity, leading to repeat purchase behaviour. Here is where success lies: having tourists revisit the destination due to its gastronomy. The festive atmosphere, relaxation and fun experienced by the tourist during a gastronomic route, and the social interaction with people of similar interests create associations in the tourist’s mind linked to the good times experienced by the visitor.

The researcher will employ the descriptive research method. According to Siedlecki (2020), descriptive quantitative study is used to describe individuals, events and conditions of the subject without manipulation, and is a framework where research is conducted following a set of data collection guidelines. In this study, the researcher will be utilizing an adopted questionnaire and conduct surveys to local and foreign tourists. Questionnaire refers to a research instrument, in which a series of question, is typed or printed along with the choice of answers, expected to be marked by the respondents, used for survey or statistical study.

Participants of the Study

The main respondents of the study are the travelers who visited Capiz as a tourist either residents or non-residents. Data from the Capiz Provincial Tourism and Cultural Affairs Office (PTCAO) on tourist arrivals will be collected. From here, the sample size will be determined.

Data Collection Instrument

The survey instrument consists of four sections. The questionnaire to be used is an adaptation of the study of Etrata, R. (2021) entitled "The awareness and authenticity of gastronomic tourism in Ilocos Region" which were aptly modified to suit the purpose towards which this study will be conducted. The questionnaire will undergo a validation and reliability test to ensure the dependability and consistency of the test.

The survey instrument will utilize a 5-point Likert type scale. The anchors include Strongly Agree, Agree, Moderately Agree, Disagree, and Strongly Disagree.

Data Gathering Procedure

The researcher will send a request letter indicating the intent to conduct the survey. Upon approval with the PTCAO and the panel of experts in the Campus, distribution of questionnaires will be done through an online survey by Google Forms or on an actual visit with the identified establishment and food markets, if needed.

Data Analysis

Weighted mean will be used to assess the factors affecting gastronomic attractiveness, destination attractiveness, and tourist experience and satisfaction. In addition, inferential statistics such as independent sample t-test and Pearson Product Moment Correlation will be used to test the hypotheses of the study.

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart. Below is an example. This can be modified base on your desired Work plan.)

Activities	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
1. Writing Research Proposal, Presentation and Approval
