**(9A) Abstract** (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

In every activity conducted by any organization, it shall be coupled with evaluation to assess its effectiveness. This descriptive-correlational research was conducted from September to December 2022 to find out the attitude of the respondents towards the different components of training like training needs assessment (TNA), selection criteria and training design used by the Campus. Secondly, it aimed to determine the impact of training to employees' job performance. Also, it ascertained significant differences in the attitude of the respondents towards the training components as they were grouped as to sex, age and length of work experience. Finally, it aimed to establish the relationship between trainings conducted by the University and impact to employees.

Findings reveal that respondents "strongly agree" on the training needs assessment, selection criteria and training design of the University. There was a high impact of trainings conducted and there was also a significant relationship between trainings and impact of training to employees.

Needs assessment, employees, job performance, attitudes

**(10) Introduction** (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

It is the ultimate goal of all organizations to provide quality service to its clientele. With this, it has to give optimum attention to the enhancement of skills of its human resources who are the frontline service providers of the organization so as to be ready and be equipped with the necessary skills in the performance of their jobs. This goal can be achieved through continuous training, either upskilling or reskilling of its human resources. As Khan et al (2016) contend, training helps the workforce adapt flawlessly to new technology, thereby increasing the efficiency and productivity of individuals and organizations. Moreover, Abeeha and Bariha (2012) asserted that while considering a training process, it is essential to know who is to be trained, the method and program of training and also whether the main goals of the trainings are being achieved or not. Formal training is indeed only one of the ways of ensuring that learning takes place (Armstrong, 2014). Capiz State University Sigma Satellite College, in particular, engages in continuous employee training programs; however, no study has ever been conducted to monitor the progress and effects of these trainings to its people. This is considered a gap in the empirical knowledge in that area. Hence, this study focuses on investigating the impact of training programs so far provided by the University on the performance of its teaching and non-teaching personnel so it can improve their employees' performance for organizational development.

Training can be defined in different ways. It may be defined as a systematic development of the knowledge, skills and behavior required by employees to do adequately on confirmed task or job (Shaheen, Naqvi& Khan, 2013) or simply learning that is provided in order to improve performance on the present job (Amin et al., 2013). On the other hand, Elnaga and Imran (2013) define employee training as programs that provide workers with information, new skills, or professional development opportunities. It can take place in numerous ways, on the job or off the job; in the organization or outside organization. Regardless of the view, the term training draws elements of acquiring new knowledge to help manage both current and future situations.

Training is the most basic function of human resources management. It is the systematic application of formal processes to help people to acquire the knowledge and skills necessary for them to perform their jobs satisfactorily (Armstrong, 2020). These activities have become widespread human resource management practices in organizations worldwide (Hughes et al., 2019). In today's business world, training is the main strategy to perform the institutional objectives. It helps to improve employee and employer performance (Khan et al., 2016; Ruttledge & Cathcart, 2019). Employees are the most precious asset for any organization in building up or destroying its reputation and profitability (Elnaga & Imran, 2013). Some of the factors that determine the performance of employees are training of employees, organizational policies, working situations, job satisfaction, interactions with in the organization (Aktar et al., 2012;). Thus, training is one of the most effective tools to enhance the employee performance and to achieve the organizational objectives and goals effectively and efficiently (Afroz, 2018; Garavan et al., 2020).

Luo (2000) stated that organizations face challenges with trainings as a result of four different factors. First, trainings that are conducted are not essentially tied to the technicality of the role. Second, prior needs assessments are rarely performed, despite suggestions to do so in most training guides. Third, training instructors and organizations rarely evaluate outcome(s) resulting from trainings. Evaluation, when one is done, is often focused on how trainees feel about the training and not what was learnt. Feedback forms often referred to as "smile sheet", as the response from trainees to determine the impact of the training. Fourth, the rapid expansion of personal development and training has taken place with little or no consideration of scientific evidence that may link such training with improvements in organizational goals.

In the study conducted by Juneo et al (2017), teachers had positive perception towards their professional growth and there is a positive impact of in-service training programs on the performance of teachers. Raja and Mohammed (2011) stated that training has a positive and significant with level of performance. This indicates that the trainees will reach at the desired level of performance if the training is well designed. Well-designed training can be indicated by clearly defined objective,

relevant and updated content, effective selection of training method and trainer. Aside from this, Rohmah et al (2021) asserted the importance of teachers' readiness to change as this mediates between training and performance.

This study is anchored on two main theoretical approaches towards employee training, namely, the human capital approach and the technology-based approach. According to Luo (2000), the human capital approach regards training as investment in human capital. Thus, training is provided only when the benefit from productivity gains is greater than the cost of training.

According to Armstrong (2020), human capital is the knowledge, skills, and abilities of the people employed in an organization, human capital theory regards people as assets and stresses that investment by organizations in people will generate worthwhile returns. The concept of human capital is associated with the concept of intellectual, social capital, and organizational capital. Intellectual capital is defined as stocks and flow of knowledge available to an organization and regarded as the intangible asset associated with people, and also as cited on (Mathis & Jackson, 2016), human capital is the collective value of the capabilities, knowledge, skills, life experiences, and motivation of an organization's workforce, intellectual capital to reflect the thinking, knowledge, creativity, and decision-making that people in organizations contribute.

On the other hand, the technology-based approach regards training as a skill formation process. According to this approach, the expanded training in the contemporary period is driven by the rapidly changing technologies and work reorganization. Thus, training is provided because it satisfies the functional needs of an organization and equally contributes to human capital accumulation or skill formation. These approaches, however, to a large extent overlooked the content of employee training, which could be a resultant effect of training design and training delivery style (Luo, 2000).

The researchers who are part of the CAPSU Sigma have considered conducting this study so as to help the organization in its desire to further give its people what they need in as far as human resource development is concerned.

### Statement of the Problem

This study aimed to determine the impact of training on the job performance of employees of Capiz State University Sigma Satellite College.

Specifically, it aimed to answer the following questions:

1. What is the attitude of the employees towards the training components of the Campus classified as training needs assessment (TNA), selection criteria and training design as an entire group and when they are classified as to sex, age and length of work experience?
2. What is the impact of training to job performance?
3. Are there significant differences in the attitude of the respondents towards the different components of training when they are grouped according to sex, age, length of work experience?
4. Is there a significant relationship between training components and impact of trainings?

**(11) Materials and Methods or Methodology** (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

### METHODOLOGY

Utilizing the descriptive-correlational design, this study was conducted from September to December 2022. Primarily, it aimed to describe the attitude of the respondents towards the different components of training like training needs assessment (TNA), selection criteria and training design used by the Campus. Secondly, it aimed to determine the impact of training to employees' job performance. Furthermore, the study ascertained the significant differences in the attitude of the respondents towards the training components as they were grouped as to sex, age and length of work experience. Finally, it aimed to establish the relationship between trainings conducted by the University and impact to employees.

The population of the study covered the 65 permanent employees of CAPSU Sigma Campus. From that group, 55 employees were considered respondents of the study. The process was done through simple random sampling.

To gather the needed data, the study adapted the questionnaire used by Yimam (2022). The tool was revised to fit for the present study. Also, it was validated by

|                                                                                   |                 |                              |                |                         |
|-----------------------------------------------------------------------------------|-----------------|------------------------------|----------------|-------------------------|
|  | Document Type:  | <b>FORM</b><br>ISO 9001:2015 | Document Code  | <b>RES-F08</b>          |
|                                                                                   |                 |                              | Revision No.   | <b>00</b>               |
|                                                                                   | Document Title: | <b>COMPLETED RESEARCH</b>    | Effective Date | <b>January 26, 2023</b> |
|                                                                                   |                 |                              | Page           | <b>Page 1 of 2</b>      |

three experts in English and Research. Also, the said questionnaire was subjected to Cronbach's alpha giving the result of 0.7 making the test reliable.

To gather the needed data, the respondents accomplished the questionnaire. As soon as they were done, data were collated, analyzed and subjected to statistical analysis.

Frequency, mean and percentages were used to describe the attitude of the respondents towards training components like training needs assessment (TNA), selection of trainees, training design and impact of trainings conducted. For inferential analysis, *t*-test for independent samples, one-way Analysis of Variance (ANOVA) and Pearson's *r* were utilized. Alpha level was set at 5% level of significance.

To analyze the respondents' perception towards TNA, selection of trainees, training design and impact to job performance, the verbal interpretation was used:

| Scoring Interval | TNA               | Selection Criteria | Training Design   | Impact of Training |
|------------------|-------------------|--------------------|-------------------|--------------------|
| 4.2 – 5.0        | Strongly Agree    | Strongly Agree     | Strongly Agree    | Very High Impact   |
| 3.4 – 4.1        | Agree             | Agree              | Agree             | High Impact        |
| 2.6 – 3.3        | Uncertain         | Uncertain          | Uncertain         | Moderate Impact    |
| 1.8 – 2.5        | Disagree          | Disagree           | Disagree          | Slight Impact      |
| 1.0 – 1.7        | Strongly Disagree | Strongly Disagree  | Strongly Disagree | No Impact          |

**(12) Results and Discussions** (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

### Profile of the Respondents

As shown in Table 1, out of 55 respondents, more than majority (56.36%) constitutes females, aging between 31 to 40 years old and serving the University for more than 20 years. This means that in terms of trainings attended, they have attended several trainings already that were sponsored by the University, by the Campus or by other government entities.

#### Attitude of the Respondents towards Training and its Components

As an entire group, students “strongly agree” to training and its components. Specifically, they have the highest level of agreement to the training needs assessment (TNA), (M=4.43; SD=0.44). Furthermore, respondents “strongly agree” to the impact of training followed by their level of agreement to the training design, (M=4.36; SD=0.42) of the Campus. On the other hand, they had a lower level of agreement to selection of trainees, (M=3.92; SD=0.50) respectively. Table 2 reflects the result.

**Table 2. Respondents’ Attitudes towards Training as a whole group**

| Variables                       | Mean | SD   | Verbal Interpretation |
|---------------------------------|------|------|-----------------------|
| Training Needs Assessment (TNA) | 4.43 | 0.44 | Strongly Agree        |
| Selection of Trainees           | 3.92 | 0.50 | Agree                 |
| Training Design                 | 4.36 | 0.42 | Strongly Agree        |
| Impact of Training              | 4.38 | 0.48 | Very High Impact      |
| Grand Mean                      | 4.27 |      | Strongly Agree        |

|                                                                                   |                 |                              |                |                         |

### Respondents' Attitudes towards training needs assessment when categorized as to sex, age and length of work experience

In general, findings show that respondents “strongly agree” to the training needs assessment (TNA) of the Campus irrespective of sex, age and length of work experience. Specifically, males, (M=4.49; SD=0.44); those aging 41 to 56 years old, (M=4.56; SD=0.39) and those serving the Campus/University for 16 to 20 years, (M=4.63; SD=0.41), had higher level of agreement compared with the other groups. The result is explained in Table 2a. This implies that although all employee “strongly agree” on the TNA of the Campus, males may have asserted more on the importance of conducting the TNA. Most males are born ‘planners’, and they can relate to this activity whenever they venture into something. Additionally, those aging 41 to 50 years old and those serving the University for 16 to 20 years may have reached that level of psychological maturity that put importance on careful planning of every activity.

Table 3. Attitude of the respondents towards TNA when categorized as to sex, age and length of work experience

| Characteristics                  | Mean | Standard Deviation | Verbal Interpretation |
|----------------------------------|------|--------------------|-----------------------|
| <b>Sex</b>                       |      |                    |                       |
| Male                             | 4.49 | 0.44               | Strongly Agree        |
| Female                           | 4.39 | 0.44               | Strongly Agree        |
| Mean                             | 4.43 | 0.44               | Strongly Agree        |
| <b>Age</b>                       |      |                    |                       |
| 30 years old and below           | 4.35 | 0.42               | Strongly Agree        |
| 31 to 40 years old               | 4.55 | 0.44               | Strongly Agree        |
| 41 to 50 years old               | 4.56 | 0.39               | Strongly Agree        |
| Above 50 years old               | 4.30 | 0.45               | Strongly Agree        |
| Mean                             | 4.43 | 0.44               | Strongly Agree        |
| <b>Length of Work Experience</b> |      |                    |                       |
| 5 years and below                | 4.57 | 0.51               | Strongly Agree        |
| 6 to 10 years                    | 4.33 | 0.45               | Strongly Agree        |
| 11 to 15 years                   | 4.50 | 0.52               | Strongly Agree        |
| 16 to 20 years                   | 4.63 | 0.41               | Strongly Agree        |
| More than 20 years               | 4.33 | 0.39               | Strongly Agree        |
| Mean                             | 4.43 | 0.44               | Strongly Agree        |

|                                                                                   |                 |                              |                |                         |

|                                                                                   |                 |                              | Page           | <b>Page 1 of 2</b>      |

In general, respondents “strongly agree” on the training needs assessment conducted by the Campus. As a matter of fact, findings reveal that they had the highest level of agreement on the idea that that “training needs are based on work requirements”, (M=4.75, SD=0.44); and that “they are identified based on the regular assessment of performance”, (M=4.67; SD=0.47). Employees had the same level of agreement towards these statements: “training needs are identified through comparing the current abilities of employees and the new requirements of work”; “training needs are identified based on the introduction of new technologies”; and “training needs are identified based on certain standards”, all having the same result (M=4.60; SD=0.49). In contrast, the statement which says that “training needs are determined based on personal relationships”, (M=3.62, SD=1.25) received the lowest level of agreement from the participants. The result is shown in Table 4. These findings indicate that employees truly believe in the integrity of the administrative head who had carefully selected its personnel when sending to trainings and the like.

Table 4. Respondents’ attitude towards training needs assessment

| Statements                                                                                                  | Mean | SD   | Verbal Interpretation |
|-------------------------------------------------------------------------------------------------------------|------|------|-----------------------|
| <i>Training needs...</i>                                                                                    |      |      |                       |
| 1. ...are based on the work requirements                                                                    | 4.75 | 0.44 | Strongly Agree        |
| 2. ...are identified based on the regular assessment of performance                                         | 4.67 | 0.47 | Strongly Agree        |
| 3. ... are identified through comparing the current abilities of employees and the new requirements of work | 4.60 | 0.49 | Strongly Agree        |

|                                                                                   | Document Title: | <b>COMPLETED RESEARCH</b>    | Effective Date | <b>January 26, 2023</b> |
|                                                                                   |                 |                              | Page           | <b>Page 1 of 2</b>      |

and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

### Conclusions

1. The “strong agreement” of the employees towards training needs assessment, selection criteria and training design” implies that they are active and supportive workers of the University that they look forward to be fully equipped and developed not only for their professional development but also to help the University.
2. The “very high” impact of training to employees indicates a very positive result and very fruitful program of the Human Resource Office.
3. The insignificant result in the attitudes of the respondents towards training components and towards the impact of training means that the attitudes of the respondents are more or less similar towards training.
4. The more the employee is sent to training, the higher is the impact and the better is his/her job performance.

### Recommendations

1. The Human Resource Office may continue the program of upskilling and reskilling of employees to improve their latters’ job performances.
2. The administration may focus more on sending employees to national and international trainings in order to attain the aim of globalization.
3. Further researches may be conducted using other variables to verify the result of the present undertaking.

**(14) Output** (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

- Improved job performance with continued reskilling/upskilling of teachers

**(15) Technology Transfer Activity Conducted** (Indicate the specific products, activity design, processes or services transferred as extension activities)

**(16) Economic Analysis** (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.

**(17) Acknowledgments** (Include only important persons and institutions with involvement in funding and conduct of the research. Justify paragraphs with main headings in caps.)

### ACKNOWLEDGMENT

Deep appreciation is hereby extended to Dr. Ramy Lloyd Lotilla, for the SPSS analysis of data; and Dr. Annalie G. Campos, for the moral and financial support to make the study possible.
