(9A) Abstract (This has a maximum of 250 words. It contains 1-2 sentences of rationale, followed by objectives, brief methodology, major findings, and implications of impact of the study.)

This descriptive correlational study aimed to know the level of the tourist motives and expectations and to determine the relationship between the level of tourists' motives and expectations to Panay Bukidnon's Cultural heritage. Conducted on February to May 2023, the respondents of the study were the 50 tourists who were visiting the cultural heritage destination which is the Panay Bukidnon. Convenient sampling method was employed in the collection of data. An adapted and modified questionnaire from Li, C., & Borbon, N. M. D. (2021) in their study entitled Tourists' motives, expectation and experience to historical sites in Hunan province. The descriptive statistical tools employed were the mean as descriptive statistics and Spearman's rho was used to test the significant relationship.

The major findings of the study revealed that the respondents as a whole, it revealed that they have a very high level of expectation as a whole and in terms of environment, cultural, services and transportation. However, in terms of transportation as component, their expectation is only high. Moreover, in terms of the level of motives as a whole, it revealed that the tourists are very highly motivated to visit in terms of in terms of visit, evaluation and emotional involvement. Furthermore, there is significant relationship between the level of motive and level of expectation to Panay Bukidnon's Cultural Heritage.

(9B) Keywords (Write 3-6 words you used in the study, preferably not found in the title because words in the title are already given keywords. This would also include process, or methodology employed.)

Expectancy, assessment, motivation, travel behavior, cultural tourism, intention

(10) Introduction (This includes the rationale, background of the study, and objectives which are not divided by subheadings. Incorporate at least three (3) reviews)

According to Central European University, Cultural heritage can be defined as the legacy of physical artifacts (cultural property) and intangible attributes of a group or society inherited from the past. Cultural Heritage is a concept which offers a bridge between the past and the future with the application of particular approaches in the present. Due to its attached values for these groups or societies, cultural heritage is maintained in the present and bestowed for the benefit of future generations. (Cultural tourism can be that distinct experience that local can offer to travelers—a potentially lucrative touch point for both domestic and international market. Culture is unique in every destination. It mirrors the various influences and experiences woven into a living tapestry handed down from generation to generation. Cultural tourism cuts across all product offerings. Everything that we do is animated by our culture—the way we welcome visitors, in the food we serve, the activities and events we plan, in our festivals, in our local markets. Reciprocally, a strong culture-based tourism market enables

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

inclusive development as crafts, arts, heritage sites, festivals—all these can generate and sustain employment and livelihood for the community, protect the environment and destinations, and celebrate the indigenous. Cultural tourism can be transformative for travelers—eat, love, pray—travel, enjoy, respect. Destinations can engage the mission-oriented market because they will not exact the high price of a damaged biodiversity, and instead of intruding, can actually blend into the peaceful life of the communities. (Jimenez,2023).

Panay Bukidnon is very rich in terms of its culture. There are lots of tourist are coming along to witness the Panay Bukidnon. The Panay Bukidnon village can be found in Acuña, Tapaz. Panay Bukidnons are rich cultural practices like in oral traditions – unwritten prose and poetry, are still sung/chanted, e.g., ambahan, sugidanon,dilot, ulawhay, handed down from generation to generation. They still have their distinctly indigenous dance – the Binanog (Kinaray-a, meaning “way of the hawks/like the hawks”), the courtship dance of the Panay Bukidnons. On special occasions, they, especially the women wear colorful ingenuous costumes/personal adornments (Gamosa, 2014). They have their socio-economic practices like weaving and embroideries. The only known living persons who can recite the epic entirely are Mr. Federico ‘Tay Pedring’ Caballero, one of the three (3) recipients of the 2001 Gawad Manlilikha ng Bayan (GAMABA) Award, along with his younger brother Mr. Romulo ‘Tay Mulok’ Caballero, recipient of 2004 ‘Search for Outstanding Indigenous Leaders’ (SOIL) Award for Culture, of the Garangan, Calinog Community (also claimed by Tapaz, Capiz) (Gamosa, 2014).

Tourists Motive

Understanding tourist motives is critical but knowing the predictors of successful tourist destination encounters is also useful for destination planning and management. It was suggested that when developing various travel products and promotional programs, marketing should consider tourist variability and demographic-based needs (Mutanga et al., 2017)

The motives of historical tourists are filled with so much curiosity about residents' culture and politics, historical collections, including the physical attributes of the place. This is an important factor, influences the decision-making of the tourist to visit one place (Apritado. 2021). The indicators in Travel motives where motivation to visit the cultural heritage, attributes to evaluation based on experience and emotional involvement.

Motivation to visit the cultural heritage

Travel motivation is an important psychological factor that motivates tourists to make travel decisions and implement travel behaviors. Travel motive is often described as an individual's willingness and internal demand for tourism behavior (Sekiguchi et al., 2019). It has an important influence on tourism decision-making and its experience, perception, and behavior. In an academic context, there is a need to enhance our understanding of the motivations of tourists.

			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

Meanwhile, the experience of tourists affects tourists' perception of tourist destinations, thereby affecting the tourist attraction of tourist destinations (Chen & Chen, 2020).

Cited in the study of Li & Borbon (2021) that Travel motivation is a significant psychological component that influences travelers' decision-making and behavior when planning trips. According to Sekiguchi et al. (2019), travel motivation is frequently characterized as a person's willingness and internal demand for tourist behavior. It has a significant impact on the experience, perception, and conduct of travelers.

Emotional Involvement

It is important to build the strong emotional resonance and reliance between tourist destinations and scenic areas. Historical sites' depictions of various cultures and individuals ought to reflect the interests and morals of their visitors. The act of visiting historical sites affects visitors emotionally. emotions linked to the qualities of tourist destinations, which the subject's perception of generates an attraction force, more or less strong, depending on how the subject perceives the tourist destination. The capacity to create these favorable emotional connections at the destination gives marketers a competitive edge.

Tourist Expectations

In other view, tourists believe that the products or services provided by the destination should achieve a certain performance. When this expectation is reached, the tourists will be satisfied, otherwise they will be dissatisfied. In the marketing context, expectation is the perception prior to experiencing a product or preconceived attributes. Expectations can be considered a comparative judgment in which satisfaction increases as the performance/expectation ratio increases (Li et al., 2011).

Expectations arise from the moment a tourist begins to plan their vacation, and those initial expectations are based on images and information coming from social media and already stored in their memory. When planning a trip, the tourist compares his or her expectations of the destination's cultural and historic quality with what he or she actually experiences when they arrive at the destination. (Hernández-Rojas et al., 2021). The findings of Sánchez-Fernández et al. (2020) concluded that exceeding expectations is crucial for customer preference. In the research of Apritado and Borbon (2020) they stated that the vast majority of attraction respondents are repeat visitors. Expectations and experiences at tourist attractions include a well-built setting and friendly locals, a variety of local transit options, and the chance to participate in religious activities.

			Page	Page 1 of 2

Tourist Expectations indicators

The indicators of tourist expectations were the environment, range of cultural attractions, tourism service and transportation.

Environment

Our cultural heritage is an important part of our environment. The quality of the environment has become a concern of tourists as a result of rising environmental consciousness, visitor demand for greater quality, and growing rivalry among destinations. According to Ouattara et al. (2018), the environmental quality is a common concern when making travel-related decisions and it is a competitive factor among tourist destinations. Many studies point to an upsurge in the number of tourists looking for holiday sites in environmentally sensitive areas. Tourism activities, on the other hand, are widely acknowledged to cause enormous environmental damage. The findings of the study of Maxim and Chasovschi (2021), reveal that stakeholders agree to stress the significance of preserving heritage destinations' cultural landscapes, with the majority believing that stricter regulations should be implemented. Wang et al. (2021) investigated the ramifications of various weather conditions and discovered an Inverted-U effect of temperature on tourists' emotional experiences. The study provides deep insights into the impact of the environment on tourism and advances the applications of environmental psychology in tourism settings.

Range of Cultural Attractions

Attractions are sites of culture, heritage, natural beauty, or activities that entice visitors to come. It is primarily from the standpoint of the visitor's satisfaction that quality in cultural heritage attractions is measured and assessed (Carbone et al., 2020). When tourists evaluated the city's attractions, their judgments of the city's individuality, quality, and/or beauty were all favorably influenced (Shaykh-Baygloo, 2021). Masoud et al. (2018) determined that the concept of intangible cultural heritage is new to domestic tourists. Among the most popular activities for tourists are those that focus on the region's intangible history, such as learning to cook local dishes, making and sampling local sweets, and learning about the region's traditional medicines and healing plants. Providing products and services to visitors constitutes the visitor economy, which comprises both private and governmental sector activity and expenditures (Stainton, 2021).

Tourism Services

Tourism and travel-related services encompass all of the services provided by hotels and restaurants, travel agencies and tour operators, tourist guides, and other associated businesses. The findings of the study of Kabadayi et al. (2019) stated that customers can now enjoy services that were previously inaccessible due to smart services (intelligent, anticipatory, and adaptable data and technology utilization). A visitor survey results in the study of Cudny et al. (2021) revealed that event is a major draw for tourists. According to the comparative analytical results, service providers are aware of some factors that influence visitor expectations, but they might be overlooking two facts that indicate knowledge gaps: how social media affects a place's image and how that image affects what people expect to see there. These two

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

differences show how important it is for service providers to learn more about their customers. (de Lima et al., 2019).

Transportation

Transportation is a significant component of the tourism industry since it connects people to a wide variety of different destinations. There is widespread consensus that when transportation infrastructure improves, more people will come to visit a destination. Martin et al. (2016) came to the conclusion in their study that the mode of transportation used during the visit has a big impact on tourist satisfaction. According to Perea-Medina et al. (2019), promoting public transit over other means of transportation is necessary for the development of a long-term model of tourist mobility, which must be sustainable. The research of Yang et al. (2018) indicates how urban pressure, unregulated tourism and transportation expansion, and other factors contribute to the fragility of World Heritage Sites and the reduction of the ecological value of natural World Heritage Sites.

In the study of Bacilig and Ylagan (2022) about the Level of tourists' expectation and experience to the heritage sites of Ilocos Sur, it was mentioned that there are several variables that influence tourists' expectations, such as the cultural and architectural aspects of the city as well as its cuisine and infrastructure.

Statement of the Problem

1. What is the level of motive of tourists in terms of visit, evaluation and emotional involvement?
2. What is the level of expectation of the tourists in terms of environment, cultural, services and transportation?
3. Is there a significant relationship between the level of motive and level of expectations of tourists to Panay Bukidnon's cultural heritage?

Conceptual Framework

Theoretical Framework

This study is anchored on the Maslow's Hierarchy of Needs. This theory suggested that people were motivated to fulfill basic needs before moving on to other. The Maslow's 5-stage theory on motivation, extended by cognitive and aesthetic needs (Zelenka and Pásková, 2012), is applied to the condition of rural areas. Level 1: Physiological needs: Every tourism destination must meet two basic needs – physiological needs and safety. In tourism, the physiological needs are connected to gastronomy and accommodation. In rural tourism, the supply side is usually concentrated on food and customs adherent to the particular region or village. Level 2: Safety needs – this is a reflection of location's character, social life, risk of undesired pathological characters. Tourists' safety, calm and peace are the main requirements of tourist in rural areas. Calm and peace are prerequisites on physical and mental nursing. Entrepreneurs in rural tourism do not provide just comfortable accommodation or tasteful food. Their business is based on friendly atmosphere, safety, serenity, and family peace, traditions and customs of their region, on responsible relation to natural and human surrounding. Level 3 and 4: Social needs – such as being part of a particular group. These are needs of esteem connected with self-esteem or with esteem of others. In case of rural tourism personality, hospitality, uniqueness and hosts' courtesy are required. Courage and passion, but also responsibility, devotion and discretion belong to any kind of business. For a businessman's personality in rural tourism, typical features include diligence, accuracy, dedication, creativity, persistence, but also managerial and organizing skills, ability to communicate with and treat people. (Šimková and Holzner, 2014)

Dispensable needs (so called high category needs – “metaneeds”): Level 5 and 6: Cognitive and aesthetic needs: Cognitive needs are described such as knowledge and understanding local life-style, heritage and traditions, or aesthetic needs, such as appreciation and search for beauty, balance and form. Level 7: Self-actualization needs are on the top of the Maslow's hierarchy. These refer to the need for personal cultivation, needs realizing personal potential, self-fulfillment, seeking personal growth and peak experiences. In terms of rural tourism, the level of self-realization is dependent on a particular rural locality, structure and quality of tourism services. No doubt these needs can also have sustainable features of tourism. (Šimková et. al, 2014)

(11) Materials and Methods or Methodology (This includes the materials, methods, duration & location of the study. Materials and Methods are headings used in Natural Science researches and methodology is Social Sciences. Presentation of materials may not necessarily be in separate heading but may be incorporated in the specific methods used. Justify paragraphs with main headings in caps.)

Participants of the Study. There were 50 participants in this study. These participants were the tourists visiting the Panay Bukidnon Village. In the determination of participants which are the tourist, we obtain information from the logbook of the

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

tourism office and the Panay Bukidnon community. Convenient sampling was employed in the selection of participants in this study.

To gather the needed data, the present investigation adopted and modified survey questionnaire that was used by Li & Borbon (2021) in the determination of the Tourist Motives, Expectations, and Experience to Hunan Province.

The researchers conducted the data gathering through the use of a printed survey questionnaire for the tourists who were there during the conduct of the study. The other one is the sending of Google forms to the tourists, whose names were identified using the tourism office logbook. The municipal tourism office helped the researchers send the Google forms to those tourists who visited from January to May 2023.

(12) Results and Discussions (This part contains presentation of results (data) with reference to the table and figure, to be followed by discussion, with support of reviewed literature. Sequence shall be based on the objectives of the study. Tables are formatted without the vertical lines. Horizontal lines are set at the top and bottom portions as well as below table headings and above major subdivisions. Justify paragraphs with main headings in caps.)

As shown in table 1, the level of motive as a whole is very high with the mean of 4.43 which fell in the scale of 4.51 – 5.00. In terms of visit, evaluation and emotional involvement , the tourists are very high motive.

Table 1. *The level of motive as a whole and in terms of visit, evaluation and emotional involvement.*

Indicators	Mean	Description
Whole	4.43	Very high motive
Motives to Visit	4.49	Very high motive
Attributes to Evaluation based on experience	4.43	Very high motive
Emotional involvement	4.33	Very high motive

Scale:

Mean	Description
4.51 – 5.00	very high motive
3.51 – 4.00	high motive
2.51 – 3.00	average
1.51 – 2.50	low motive
1.00 – 1.50	very low motive

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00
	Document Title:	COMPLETED RESEARCH	Effective Date	January 26, 2023
			Page	Page 1 of 2

Table 2. *The level of expectation as a whole and in terms of environment, cultural, services and transportation.*

Indicators	Mean	Description
Whole	4.33	Very high expectation
Environment	4.30	Very high expectation
Range of Cultural Attractions	4.36	Very high expectation
Tourism Services	4.55	Very high expectation
Transportation	3.94	High expectation

Scale:

Mean	Description
4.51 – 5.00	very high expectation
3.51 – 4.00	high expectation
2.51 – 3.00	Average expectation
1.51 – 2.50	low expectation
1.00 – 1.50	very low expectation

The result of the Spearman's rho in table 3 shows significant relationship ($r = .697; p = 0.00$) between respondents' expectation and motivation. The p value is less than 0.05. It means that if the tourists are highly motivated their expectation on Panay Bukidnon as a Cultural Tourist destination also increases.

Table 3. *The Spearman's Correlation Matrix for the relationship between Respondents' expectation and motive*

Correlated variables	r- value	Sig
Expectation – motive	.697***	.000

*** $p < 0.001$, significant at 0.001 alpha

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
			Revision No.	00

(13) Conclusions and Recommendations (This part shall be written in narrative form and arranged based on the objectives and findings. Conclusions are general statements answering the objectives. Recommendations are based on the conclusions. They may be split or combined based on their length, which means, conclusions and recommendations may be split under separate headings if they are long. Justify paragraphs with main headings in caps.)

SUMMARY OF FINDINGS

1. In terms of overall motive, it became clear that tourists have a very high motive to visit in terms of visitation, evaluation, and emotional involvement.
2. Overall, it was shown that respondents have very high expectations for their environment, culture, services, and mode of transportation. However, their expectations are only high in terms of transportation.
3. Additionally, there is a significant relationship between the level of motives and expectations to Panay Bukidnon as a cultural heritage.

CONCLUSIONS

Based on the foregoing findings, the following conclusions were drawn:

1. It revealed that most of the respondents have a very high motive in going to Panay Bukidnon. It means that they saw a value and cultural significance on their visit.
2. It appeared that most of the respondents have a very high level of expectation as a whole in terms of environment, cultural, services and transportation. However, when categorized, in terms of transportation, their expectation is only high. It means that they have already the expectation that the Panay Bukidnon village is very far and some of the roads are not well cemented, so their expectation is not that high compared to environment, cultural and services.
3. It showed that when the respondents are highly motivated, the level of expectation to Panay Bukidnon as a Cultural Heritage is also increasing.

RECOMMENDATIONS

In view of the findings, conclusions, the following were recommended:

1. The destination management organization and the local government unit may highlight the importance of accessibility to cultural destination. They may possibly cement and fix the roads and put tourism information signages. They must also have accessible local guides when the tourists are visiting the Panay Bukidnon village. The findings could help the Panay Bukidnon to meet the expectations of the respondents.

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F08
	Document Title:	COMPLETED RESEARCH	Revision No.	00
			Effective Date	January 26, 2023
			Page	Page 1 of 2

2. Panay Bukidnon community, tourism officers, planners and local government unit may formulate programs, projects, activities, tourism plans and policy for the implementation to make the tourists highly motivated in visiting the Panay Bukidnon village.

3. Since, the findings revealed that when the tourists are highly motivated, their expectations are also increasing. These findings could help as one of their basis in implementing activities and must go in trend and creatively innovate strategic ideas that will encourage the travellers to avail services and tourism products in the Panay Bukidnon village.

(14) Output (Indicate the specific products, processes or services which the project has produced; quantify when possible.)

The results of the study was presented to the Panay Bukidnon community during the visit of the researchers at the Panay Bukidnon village.

(15) Technology Transfer Activity Conducted (Indicate the specific products, activity design, processes or services transferred as extension activities)

(16) Economic Analysis (This should present the direct cost of project implementation, expenses in the production of technology, revenues generated from technology produced, return on investment (ROI) and payback period.

(17) Acknowledgments (Include only important persons and institutions with involvement in funding and conduct of the research. Justify paragraphs with main headings in caps.)

Panay Bukidnon Community, Municipality of Tapaz and Calinog, Dr. Joahna F. Tibus

(18) References (It should include only works mentioned in the text and should be arranged alphabetically. Citations shall not be less than 13 entries. This must follow the APA latest edition format, in hanging indentation with 12-point space in between.)
