(9) Rationale (State the research problem and significance of the project to the current needs of the country. The proposal should justify resource expenditure. A typical justification would include a brief introduction, a general statement concerning the historical basis for R & D and, thrusts being addressed, utilization of the expected output and the impact information generated will have on science, the target users and the country.)

Capiz State University is continuously training its employees with the hope that the latter will improve the organizational performance. As employees are sent on training, they gladly participate to such trainings and come back to their station without the organization's knowledge whether the trainings have certain effects to the employees and to their job performance. Sad to say, in Capiz State University, no study has ever been conducted to monitor the progress and effects of these trainings to the job performance of its people. This is considered a gap in the empirical knowledge in that area. Hence, this study focuses on investigating the impact of training to employees' job performance so as to come up with programs and strategies to further effect the training to employees and to their job performances and eventually make an impact to the employee and to the organization as well.

Employees' training is a fundamental program of all organizations. Khan et al (2016) contend that training helps the workforce adapt flawlessly to new technology, thereby increasing the efficiency and productivity of individuals and organizations. Formal training is indeed only one of the ways of ensuring that learning takes place (Armstrong, 2014). Meanwhile, Abeeha and Bariha (2012) assert that while considering a training process, it is essential to know who is to be trained, the method and program of training and also whether the main goals of the trainings are being achieved or not.

Training can be defined in different ways. It may be defined as a systematic development of the knowledge, skills and behavior required by employees to do adequately on confirmed task or job (Shaheen, Naqvi & Khan, 2013) or simply learning that is provided in order to improve performance on the present job (Amin et al., 2013). On the other hand, Elnaga and Imran (2013) define employee training as programs that provide workers with information, new skills, or professional development opportunities. It can take place in numerous ways, on the job or off the job; in the organization or outside organization. Regardless of the view, the term training draws elements of acquiring new knowledge to help manage both current and future situations.

Training is the most basic function of human resources management. It is the systematic application of formal processes to help people acquire the knowledge and skills necessary to perform their jobs satisfactorily (Armstrong, 2020). These activities have become widespread human resource management practices in organizations worldwide (Hughes et al., 2019). For the business world, training is the main strategy to perform the institutional objectives. It helps to improve employee and employer performance (Khan et al, 2016; Rutledge & Cathcart, 2019). Employees are the most precious asset for any organization in building up or destroying its reputation and profitability (Elnaga & Imran, 2013). Some of the factors that determine the performance of employees are training of employees, organizational policies, working situations, job satisfaction, interactions with in the organization (Aktar et al., 2012;). Thus, training is one of the most effective tools to enhance the employee performance and to achieve the organizational objectives and goals effectively and efficiently (Afroz, 2018; Garavan et al, 2020).

(9-A) Project Description (Discuss the project strategy and plan of action of the project. It should also describe the technical procedures and other works needed to carry out the project objectives. The relationship of the project inputs and activities should be explained clearly in this section. Projects similar/related to the proposed project should be mentioned. .)

(10) Objectives/Statement of the Problem (for Social Sciences) (Statement of the specific purpose to address the problem areas of the project.)

Statement of the Problem

This study aimed to determine the impact of training on the job performance of employees of Capiz State University.

Specifically, it seeks answers to the following questions:

1. What is the attitude of the employees towards the training components of the Campus classified as training needs assessment (TNA), selection criteria and training design as an entire group and when they are classified as to sex, age and length of work experience as perceived by their supervisors and employees themselves?
2. What is the impact of training to job performance as perceived by their supervisors and employees themselves?
3. Are there significant differences in the attitude of the respondents towards the different components of training when they are grouped according to sex, age, length of work experience?
4. Are there significant differences in the perception of the supervisors and employees?
5. Is there a significant relationship between training components and impact of training?

(11) Review of Literature/Prior Art Search (Related researchers/activities that have been conducted. State-of –the-art of current technology / information from which the project proposal will take-off).

A lot of studies have been conducted to show the effect of training to employees. In the study conducted by Juneo et al (2017), teachers had positive perception towards their professional growth and there is a positive impact of in-service training programs on their performance. Raja and Mohammed (2011) conformed this idea and asserted that trainees will reach at the desired level of performance if the training is well designed. Well-designed training can be indicated by clearly defined objective, relevant and updated content, effective selection of training method and trainer. For Rohmah et al (2021), teachers' readiness to change matters as this mediates between training and performance.

Despite these supportive effects of training to employees' performance (June et al, 2017; and Raja & Mohammed, 2011), the study of Fegl et al (2022) revealed that low number of training hours and excessive number of training hours have no impact on employee performance.

(12) Scientific Basis/Theoretical Framework (Include concepts, theories and variables that indicate relevant relationships to be tested).

This study is anchored on two main theoretical approaches towards employee training, namely, the human capital approach and the technology-based approach. According to Luo (2000), the human capital approach regards training as investment in human capital. Thus, training is provided only when the benefit from productivity gains is greater than the cost of training. According to Armstrong (2020), human capital is the knowledge, skills, and abilities of the people employed in an organization, human capital theory regards people as assets and stresses that investment by organizations in people will generate worthwhile returns. The concept of human capital is associated with the concept of intellectual, social capital, and organizational capital. Intellectual capital is defined as stocks and flow of knowledge available to an organization and regarded as the intangible asset associated with people, and also as cited on (Mathis & Jackson, 2016), human capital is the collective value of the capabilities, knowledge, skills, life experiences, and motivation of an organization's workforce, intellectual capital to reflect the thinking, knowledge, creativity, and decision-making that people in organizations contribute. On the other hand, the technology-based approach regards training as a skill formation process. According to this approach, the expanded training in the contemporary period is driven by the rapidly changing technologies and work reorganization. Thus, training is provided because it satisfies the functional needs of an organization and equally contributes to human capital accumulation or skill formation. These approaches, however, to a large extent overlooked the content of employee training, which could be a resultant effect of training design and training delivery style (Luo, 2000).

(13) Methodology (Details such as; a) variables to be measured and evaluated; b) treatments to be used and their layout; c) experimental procedures and design; d) statistical analysis; e) evaluation method and observations to be made, strategies for implementation.)

The variables to be evaluated will include the attitude of the employees towards the training components of the University classified as training needs assessment (TNA), selection criteria and training design.

This will make use of mixed methods research. Quantitative research using survey method will be used to gather data from the two groups of respondents: employees and supervisors. Stratified random sampling will be used to identify the participants per campus while purposive sampling will be employed for the supervisor respondents.

To gather the needed data, the study will adopt the questionnaire of Yimam (2022). The tool will be revised to fit the present study. Also, it will be validated by experts in English and Research. Also, the said questionnaire will be subjected reliability test through Cronbach's alpha. Finally, to gather the qualitative data, focus group discussion (FGD) will be done.

Frequency, percentages, mean, standard deviation, t-test for independent samples, one-way Analysis of Variance (ANOVA) and Pearson's r will be the statistical tests to be used. The data will be run through Statistical Package for Social Sciences (SPSS).

To analyze the respondents' perception towards TNA, selection of trainees, training design and impact to job performance, the verbal interpretation will be used:

Scoring Interval	TNA	Selection Criteria	Training Design	Impact of Training
4.2 – 5.0	Strongly Agree	Strongly Agree	Strongly Agree	Very High Impact
3.4 – 4.1	Agree	Agree	Agree	High Impact
2.6 – 3.3	Uncertain	Uncertain	Uncertain	Moderate Impact

	Document Type:	FORM ISO 9001:2015	Document Code	RES-F09
			Revision No.	00
	Document Title:	RESEARCH PROPOSAL	Effective Date	January 26, 2023
			Page	Page 1 of 4

1.8 – 2.5	Disagree	Disagree	Disagree	Slight Impact
1.0 – 1.7	Strongly Disagree	Strongly Disagree	Strongly Disagree	No Impact

(14) Major Activities/Work plan (Enumerate in chronological order the task to be undertaken. Use gantt chart.

Research Objectives	2024-2025											
	Feb 2024	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	Jan 2025
1. Drafting of the proposal												
2. Identifying the respondents												
3. Conduct of Study												
4. Tabulation of Data												
6. Analysis of Data												
7. Presentation of Result												
8. Publication of Result												

(15) Expected Output (Indicate the specific products, processes or services which the project is expected to produce; quantify when possible)

(16) Technology Transfer Activity Design (Indicate the specific products, activity design, processes or services to be transferred as extension activities).

(17) Target Beneficiaries (Who the clientele are and what are the expected outcome/effects of the use of the projects output)

CAPSU as an organization will benefit from this study as it will be known whether the trainings that the school funded have impact on employees' job performance. This is also useful in the continued goal of being CSC-Prime.

(18) Personnel Requirement

Name	Role (Program, Project, Study Leader)	Field of Specialization
Annabelle F. Nobleta	Study Leader	English
Ramy Lloyd Lotilla	Statistician	Mathematics/Engineering
Human Resource Officers CAPSU	Informants	-
Augustin Borbon	Research Assistant	Computer Science

Percent time devoted to the Program/ Project/ Study:

Program/Project Leader (in hours):

Program/Project Members (in hours):

(19) Budgetary Requirement

Designation

- o Research Coordinator, TM Department, SY 2022-2023
- o Training Coordinator, September 2018 to date
- o Adviser, TM Publication, June 2019 to date

Researches Conducted

- o Tracer Study of BSTM Graduates
- o Reading Comprehension Skills of College Freshmen
- o Learning Styles of College Students at CAPSU Sigma
- o Research Capability of Faculty Members at CAPSU Sigma
- o Career Preferences of Grade 12 Students in the Province of Capiz
- o Hard Skills of Faculty Members at CAPSU Sigma: Basis for Training Design

Educational Qualification

- o Completed academic requirements (CAR) in Doctor of Education, Filamer Christian University
- o Master of Arts in Teaching (English), FCU
- o Bachelor of Secondary Education, PSPC

Seminars/Trainings Attended

- o Training of Teacher Trainers on Flexible Learning in the New Normal
Commission on Higher Education (CHED) and University of the Philippines Open University (UPOU)
September 15 to October 16, 2020
- o 4th International Conference on Research, Education, Management and the Social Sciences (ICREMSS)
November 23-25, 2019
Zambales, Philippines
November 23-25, 2019
- o Book Writing and Authorship Seminar-Workshop
Capiz State University Dayao Campus
July 23, 2019
- o Seminar-Workshop on IMs Preparation and Development
Capiz State University Dayao Campus
