

I. **PROJECT TITLE:** CAPSU Kontra ASF, Bird Flu and Rabies:
Information Campaign on African Swine Fever, Bird
Flu and Rabies in the Province of Capiz

II. **ILLUSTRATIVE BUDGET**

SOURCES OF EXPENSES	Quantity	Amount (CapSU)
A. Personnel Services (For studies needed the Research Assistant, informant/s, guide)	1 @ 11,068 x 12 months	132, 816.00
B. Maintenance and Other Operating Expenses (MOOE)		
Transportation allowance		30,000
Representation Expenses		30,000
Training Expenses		100,000
Supplies (Veterinary and Office)		50,000
Communication		5,000
Others		20,000
CAPITAL OUTLAY		
Total		Php 235, 000.00

III. **PARTNERS:** DA RFO VI, DA BAI VI, Capiz Provincial Veterinary Office, LGU – DA Office, Brgy. Officials, DVM Students, Hog and Poultry Raisers

IV. **LOCATION AND SITES:** Province of Capiz

V. **PROPONENTS:** Dr. Maryneth B. Barrios
Dr. Leah Ingalla

VI. **SUMMARY**

African Swine Fever (ASF), Avian Influenza or Bird flu and Rabies are the three highly pathogenic and most common diseases that has a great impact that cause lots of mortality, socio economic impact and financial losses to majority of hog and poultry raisers as well as deaths of some individual. Massive increase of pork prices as well as poultry products occurred because of shortage supplies of these two commodities in the market due to ASF and Bird Flu. Our government are now facing great battle in order to control this diseases and to save our industry. In addition, rabies is also a highly fatal disease in our pet animals that causes of more than 200 humans deaths. These three diseases are very important that needs to control and prevented. Thus, our local executive officers signed executive orders to strengthen the activities that will control this diseases particularly on ASF and Bird flu. Capiz State University are one of the identified government agency included in EO to combat this particular diseases. Hence, this extension activity is proposed to answer this call of the province. This extension activity will be an information dissemination activities for ASF, Bird Flu and Rabies for the different municipalities of the province. Some activity will include Training/ seminar on responsible hog and poultry raiser, basic knowledge about the disease biosecurity measures and participation to government preventive activities such as rabies vaccination and zero surveillance activities on ASF and Bird Flu.

VII. RATIONALE/ BACKGROUND

The spread of the most recent African Swine Fever (ASF) outbreak in Asia since late 2018 poses a significant threat to endemic pig species and socioeconomic security. Within domestic pigs and free-living Eurasian wild boars (both *Sus scrofa*) in Asia, ASF causes almost 100% of case fatalities. The ongoing ASF epidemic has so far caused the death of over one hundred million domestic pigs, causing unprecedented economic impacts on the global pork industry (Luskin *et al.*, 2021). This ASF has a great impact on the socio-economic, livelihood, and, most of all, the financial impact of all pig raisers (Wedzerai, 2022). In the Philippines, the Department of Agriculture (DA) confirmed the first outbreak started in July 2019; as of July 2022, 53 provinces, 704 cities/municipalities, and 3 832 barangays have experienced ASF outbreaks. The first outbreak takes place in the provinces of Rizal and Bulacan, which later spread to other nearby provinces, including Mindanao and now in Visayas. On the Visayas, the first ASF cases in Western Visayas Region were reported in Oton and San Miguel towns in Iloilo Province. As of 3 November, 772 animals were culled out of the 1 112 ASF-positive pigs in Oton Town and 149 in San Miguel Town; these infected pigs came from 25 out of 37 barangays in Oton and 2 barangays in San Miguel Town. The Iloilo Provincial Veterinary Office reported ASF cases in three more towns, namely Leganes, Alimodian, and Santa Barbara (FAO, 2022). Because of this ASF threat that may enter the province of Capiz, Governor Fredenil Castro has signed an Executive Order for the tight implementation of Kontra ASF through border checkpoints, banning of any pork products coming from different provinces, negative surveillance and information dissemination campaign which the Capiz State University particularly the College of Veterinary Medicine were included as the implementor of this Executive Order.

Bird Flu or Avian Influenza is one of the deadly poultry diseases that also cause great impact and losses to many poultry farmers, particularly in Luzon. This disease is considered the Highly Pathogenic Avian Influenza (HPAI) caused by the Asian Avian Influenza (AI) Subtype H5N1 that affect 17 provinces throughout the country. The AI outbreak was confirmed to have entered the Philippines in January 2022. Since then, a total of 198 cases were recorded nationwide, resulting in the mortality of 182,968 heads and the culling of 1,267,055 poultries. More than P122 M were distributed as indemnification by the DA-BAI as of July 29 (DA – AFID, 2022). Because of this poultry disease outbreak, many poultry farms closed which resulted in a shortage of egg supplies, including Balot coming from Luzon. In order to prevent the entry of this disease, every province, including Capiz and Iloilo, had signed an Executive Order banning all live birds, chickens, and by-products from areas in Luzon and Mindanao, where there is an outbreak of avian influenza. In addition, the DA BAI also conducted regular zero surveillance monitoring in every high dangered area including Roxas City where migratory birds are found sometimes.

Rabies on other hand, is one of the deadly and very zoonotic diseases that affects our pets, our dogs and cats; considered as a public health problem as it is one of the most acutely fatal infection, responsible for the deaths of at least 200 Filipinos each year. According to Philippines Department of Health (2022), since January of this year until month of August, there was an official's report of 222 human rabies cases in 16 of the 17 regions across the country. One hundred (100%) of the cases ended in death. This data showed an increase of 17 percent compared to the same period in 2021, with 190 reported cases (Herriman, 2022). The Department of Health reported that the 16% of the cases were from Central Luzon, 13% were from Calabarzon, 11% were from Western Visayas, and 10% were from the Davao Region. Rabies is a zoonotic disease that has a 100% fatality rate, but can be prevented and controlled with the joint actions among the DOH, Department of Agriculture, local governments, and local veterinarians in order to prevent the spread of the virus. Some of the activities

conducted are the mass rabies vaccination, responsible pet ownership training, and information dissemination to the community, barangay, and even in schools.

These three listed animal diseases are very important diseases that need immediate response and actions not only from the implementing government agency such DA, DOH, DILG but also schools, especially Veterinary School such as Capiz State University – Doctor of Veterinary Medicine, hence this extension proposal.

VIII. OBJECTIVES:

General Objective: To disseminate information on African Swine Fever (ASF), Bird Flu and Rabies Awareness in the Province of Capiz.

Specific Objectives:

1. Conduct information dissemination on ASF, Bird Flu and Rabies awareness for the different municipality of Capiz.
2. Forged linkages with the different government and non government implementing agencies for the three priorities animal diseases.
3. Prepared different IEC materials/ videos for ASF, Bird Flu and Rabies.
4. Trained farmers and pet owners on responsible raisers and pet owners.
5. Participate government agencies in the zero negative surveillance activities against ASF and Bird Flu.
6. Participate in rabies prevention activities such as regular mass rabies vaccination.

IX. ACTIVITIES/METHODOLOGY

The following are the activities to be conducted in the project:

- a. **Planning of the activities.** This will be conducted through meetings with the different students and faculty in the College of Veterinary Medicine who will join in the activity. Planning should also be assigning of the committee that will take charge in communications, coordinations, budgets, procurements, printing of tarpaulins, programs, attendance and evaluation sheets, foods, registrations and other activities related to the project.
- b. **Coordination with the partner agencies, and the selected LGU and barangays.** Prior to project implementation, coordination with the selected LGU particularly in the office of the municipal agriculture office and mayors office will be done to inform them of the activity in their municipality. The MAO officer will participants in their municipality that has the highest number of pigs, poultry, dogs and cats. Coordination with the barangay captain and local officials will also done. Coordination with the DA RFO 6, Capiz PVO will also done especially for their manpower contribution and for the veterinary materials needed in the project.
- c. **Securing of permit from the IATF and MOA with the selected municipalities.** After coordination, a formal letter and a MOA will also secured. Permit in the IATF will also be processed to ensure that the activity will follow the health protocol. This will also required all beneficiaries, students, speakers, veterinarians and partners to follow the proper health protocol through wearing of facemask, social distancing, provision of alcohol stand, checking of body temperature and health checklist in the entrance of the project site.
- d. **Procurement of supplies needed.** Prior to project implementation, the proponents will request budget in the administration for the procurement of supplies particularly in the transportation, printing of IEC materials and foods. Another way is through solicitation from

different veterinary drug companies and in the DA RFO 6 and Capiz PVO for the rabies vaccine.

- e. **Implementation of the project activities.** Project implementation will be conducted in the month of December 2022 to December 2023. The activity will be a simultaneous activity that will includes seminars and trainings, rabies vaccination, and flyers/IEC materials distribution.
- f. **Follow up and monitoring of the project activity.** Monitoring will be done via phone call, video call or house to house visitation to the participants. Annual monitoring will be done for the rabies vaccinated dogs and cats.

X. WORK PLAN/ GANTT CHART

December 2022 – December 2023

No	Description of activities	Dec	Jan Marc	-	Apr – Jun	Jul - Sep	Oct- Dec
1	Planning of the project activities.						
2	Coordination with the partner agencies, sand the selected LGU and barangays.						
3	Securing of permit from the IATF and MOA with the selected municipalities.						
4	Procurement of supplies needed.						
5	Implementation of the project activities: Seminars, Trainings Rabies Vaccination Zero Negative Surveillance IEC/ Flyers Distribution						
6.	Follow up and monitoring of the project activity.						

XI. OUTPUTS AND IMPACTS

EXPECTED OUTPUTS	DETAILS	Y1
People Services	Train/ orient swine, poultry and pet owners for the basic veterinary health needs, responsible pet ownership and dos and donts in ASF and Bird Flu to avoid its entry in the province.	300
Publications	Develop/ produce Information, Education and Communication (IEC) and promotional materials for responsible pet ownership, ASF, rabies and Bird flu. Develop promotional videos for the responsible pet ownership.	4

Republic of the Philippines
CAPIZ STATE UNIVERSITY
DUMARAO SATELLITE COLLEGE

Dumarao, Capiz
 website: www.capsu.edu.ph email address: dumarao@capsu.edu.ph

		1
Patents/IP	File 4 copyrights for the developed IEC materials and videos.	4
Places and Partnerships	Forge linkages and partnerships to LGU's, DA RFO 6, Capiz PVO, and other organizations.	5
Products	Vaccinate 100 dogs and cats against rabies.	100
	Collect blood samples for ASF	100
	Collect blood samples for Bird Flu	100
Policy	Develop one policy inputs for the mandatory rabies prevention and control, ASF and Bird Flu information drive.	1
Impact to Community/ Economics	Lessen the occurrence of rabies cases. Prevent the occurrence of ASF and Bird flu in the province. Lessen losses due to highly pathogenic diseases.	

XII. MONITORING AND EVALUATION

Monitoring will be done via phone call, video call or house to house visitation to the participants. Annual monitoring will be done for the rabies vaccinated dogs and cats.
